Ecology Of Desert Systems:

Ecology of Desert Systems Walter G. Whitford, 2002-03-25 Conventional wisdom considers deserts stark harsh regions that support few living things Most people also believe that water alone makes the desert bloom Ecology of Desert Systems challenges these conventional views This volume explores a broad range of topics of interest to ecosystem population community and physiological ecologists Climate weather patterns geomorphology and wind and water processes are examined as variables that affect the distribution of biota through fundamental ecosystem processes Descriptions of morphological behavioral and physiological adaptations of desert biota illuminate through the lens of patch dynamics principles for understanding observed patterns of primary production nutrient cycling and the effects of consumers Desertification and the techniques for monitoring and quantifying it is examined within the framework of desert ecosystem patterns and processes Focuses on the interactions of climate soil and biota along a spectrum of spatial and temporal scales Details the role of animals in desert ecosystems and landscape processes Examines watershed scale processes the ecology of ephemeral lakes and the ecological changes identified with desertification Outlines the fundamental concepts relevant to sustainable development of arid lands

The Ecology of Desert Communities Gary A. Polis, 2023-01-10 Provides interesting and thought provoking reading and is highly recommended to anyone interested in desert ecosystems or community ecology The book should serve as an inspiration to many for future research Journal of Biogeography This book is not just about deserts it is an update of the contributions that research in desert systems is making to community ecology This book will provide a useful reference for desert ecologists as well as indicate critical directions where progress needs to be made Ecology This important book fills a significant gap in previous syntheses by presenting a detailed series of reviews of current understanding of community patterns and structure in desert environments Each chapter is thorough and well

written and closes with a discussion of suggested future research These ideas will do much to focus interest on the importance of desert systems in understanding community Thus this book has interest well beyond desert ecologists alone BioScience Valuable reading and reference for ecology students teachers and researchers Quarterly Review of Biology

The California Deserts Bruce M Pavlik, 2008-07-02 This highly readable spectacularly illustrated compendium is an ecological journey into a wondrous land of extremes The California Deserts explores the remarkable diversity of life in this harsh yet fragile quarter of the Golden State In a rich narrative it illuminates how that diversity created by drought and heat has evolved with climate change since the Ice Ages Along the way we find there is much to learn from each desert species whether it is a cactus pupfish tortoise or bighorn sheep about adaptation to a warming arid world The book tells of human adaptation as well and is underscored by a deep appreciation for the intimate knowledge acquired by native people during their 12 000 year desert experience In this sense the book is a journey of rediscovery as it reflects on the ways that knowledge has been reclaimed and amplified by new discoveries The book also takes the measure of the ecological condition of these deserts today presenting issues of conservation management and restoration With its many sidebars photographs and featured topics The California Deserts provides a unique introduction to places of remarkable and often unexpected beauty

Structure and Function of a Chihuahuan Desert Ecosystem Kris M. Havstad, Laura F. Huenneke, William H. Schlesinger, 2006-07-20 The Jornada Basin LTER is located in the Chihuahuan Desert the largest in North America This region of south central New Mexico has a history of nearly 100 years as the basis for scientific research This work gives a thorough encompassing review of the tremendous array of observations resulting from experiments conducted in this ecosystem Beginning with thorough descriptions of the most salient features of the region the book then reviews a wide range of archived and active data sets on a diversity of biotic and abiotic features It next presents a syntheses of important topics including livestock grazing and remediation efforts A concluding chapter provides a synthesis of the principles that have emerged from this body of work and how these relate to the broader fields of ecology and natural resource management It concludes with recommendations for future research directions The insightful views expressed in this volume should guide management of arid landscapes globally This is the sixth volume in the Long Term Ecological Network Series

The Biology of Deserts David Ward, 2016-06-16 This book offers a concise but comprehensive introduction to desert ecology and adopts a strong evolutionary focus As with other titles in the Biology of Habitats Series the emphasis in the book is on the organisms that dominate this harsh environment although theoretical and experimental aspects are also discussed In this updated second edition there is a greater focus on the effects of climate change and some of its likely effects on deserts seeing desertification as among the most serious results of climate change leading ultimately to the increasing size of arid and semi arid regions The Biology of Deserts Second Edition includes a wide range of ecological and evolutionary issues including morphological and physiological adaptations of desert plants and animals species interactions the importance of predation

and parasitism food webs biodiversity and conservation It features a balance of plant and animal both invertebrate and vertebrate examples and also emphasizes topical applied issues such as desertification and invasive species The book concludes by considering the positive aspects of desert conservation This accessible textbook is intended for senior undergraduate and graduate students as well as professional ecologists conservation practitioners and resource managers working in the field of desert ecology

A History of Radioecology Patrick C. Kangas, 2022-12-26 This book presents a history of radioecology from World War II through to the critical years of the Cold War finishing with a discussion of recent developments and future implications for the field Drawing on a vast array of primary sources the book reviews synthesizes and discusses the implications of the ecological research supported by the Atomic Energy Commission AEC of the United States government from World War II to the early 1970s This was a critical period in the history of ecology characterized by a transition from the older largely descriptive studies of communities of plants and animals to the modern form of the science involving functional studies of energy flow and mineral cycling in ecosystems This transition was in large part due to the development of radioecology which was a by product of the Cold War and the need to understand and predict the consequences of a nuclear war that was planned but has never occurred The book draws on important case studies such as the Pacific Proving Grounds the Nevada Test Site El Verde in Puerto Rico the Brookhaven National Laboratory and recent events such as the nuclear disasters at Chernobyl and Fukushima By revisiting studies and archived information from the Cold War era this book offers lessons from the history of radioecology to provide background and perspective for understanding possible present day impacts from issues of radiation risks associated with nuclear power generation and waste disposal Post Cold War developments in radioecology will be also reviewed and contrasted with the AEC supported ecology research for further perspectives This book will be of great interest to students and scholars of radioecology environmental pollution environmental technology bioscience and environmental history

Human Adaptability Emilio F. Moran, 2018-05-04 Designed to help students understand the multiple levels at which human populations respond to their surroundings this essential text offers the most complete discussion of environmental physiological behavioral and cultural adaptive strategies available Among the unique features that make Human Adaptability outstanding as both a textbook for students and a reference book for professionals are a complete discussion of the development of ecological anthropology and relevant research methods the use of an ecosystem approach with emphasis on arctic high altitude arid land grassland tropical rain forest and urban environments an extensive and updated bibliography on ecological anthropology and a comprehensive glossary of technical terms Entirely new to the third edition are chapters on urban sustainability and methods of spatial analysis with enhanced emphasis throughout on the role of gender in human adaptability research and on global environmental change as it affects particular ecosystems In addition new sections in each chapter guide students to websites that provide access to relevant material complement the text s coverage of biomes and suggest ways to become active in

environmental issues *Human Adaptability, Student Economy Edition* Emilio Moran, 2018-10-03 This book focuses on mechanisms of human adaptability It integrates findings from ecology physiology social anthropology and geography around a set of problems or constraints posed by human habitats **Biodeterioration of Wooden Cultural Heritage** Anastasia Pournou, 2020-10-27 Since prehistoric times and throughout the course of human evolution wood has been an integral part of all civilizations Wooden Cultural Heritage can be found worldwide providing valuable information on the social and economic context of human history Nonetheless as a natural cellulosic material wood shows low resistance to biodeterioration and thus wooden Cultural Heritage often fails to escape decomposition in both aquatic and terrestrial ecosystems This book provides a comprehensive overview on the biodeterioration of wooden Cultural Heritage and describes the decay mechanisms of key organisms and microorganisms encountered in aquatic and terrestrial ecosystems Cultural Heritage professionals researchers and academics may explore within this book the associations between deteriorogens habitats and decay which will assist them to understand wood biodeterioration and design effective prevention mitigation and remediation strategies The book presents case studies around the world to demonstrate the impact of biogenic deterioration on wooden Cultural Heritage and illustrates mechanisms and patterns in order to be a useful handbook of decay diagnosis Lastly by adopting a holistic approach to wood decay basic concepts of wood technology ecology and deteriorogens biology are introduced permitting readers of different scientific backgrounds to easily comprehend wood biodeterioration Governing Global Desertification Pierre Marc Johnson, 2016-12-05 Desertification affects 70 per cent of the world's arable lands in more than 100 countries Inextricably linked to poverty it is estimated that the livelihood of 250 million people are directly affected while another billion living in rural drylands are threatened by this phenomenon This volume examines the United Nations Convention to Combat Desertification UNCCD signed in 1994 It studies the links between land degradation and poverty the role of civil society and good governance in implementing the UNCCD and the various approaches to fighting desertification Furthermore it assesses the National Action Programmes development planning and new avenues for strengthening implementation Synthesizing the main strengths and weaknesses of the UNCCD as a tool for environmental and developmental governance this informative volume highlights the main challenges facing the UNCCD in the future Concealing Coloration in Animals Judy Diamond, 2013-04-09 Color can attract mates intimidate enemies and distract predators But it can also conceal animals from detection It is an adaptation to the visual features of the environment but also to the perceptual and cognitive capabilities of other organisms Judy Diamond and Alan Bond reveal factors at work in the evolution of concealing coloration *Biodiversity in Drylands* Moshe Shachak, 2005 The first volume in the Long Term Ecological Research Network series this book summarizes the state of knowledge about biodiversity in drylands and seeks to identify questions and strategies for future research and to lay out guidelines for management of biodiversity in desert and semi desert regions Comparative Plant Succession Among Terrestrial Biomes of the World Karel Prach, Lawrence R.

Herrmann,2007-12-07 UNESCO commemorated its sixtieth anniversary in 2005 It was a year for reflection a time to look back on the progress made and the achievements accomplished over the last 60 years To celebrate the importance and relevance of science at UNESCO a publication entitled Sixty Years of Science at UNESCO 1945 2005 was launched in 2006 which offers an insight into the organization's commitment towards and endeavors in science from the past through to the present day Within the United Nations System UNESCO has one of the longest traditions in addressing dryland problems from a scientific point of view As it happened arid zones were precisely at the centre of UNESCO's earliest efforts at international scientific collaboration in the study of natural resources The first international research program dealing with these zones was launched back in 1951 under the direction of an International Advisory Committee It was continued until 1964 after being raised to the status of a Major Project of the Organization in 1957 This Major Project was a pioneer program in many respects One of its merits and not the least was that it blazed a trail in its interdisciplinary approach to the study of natural resources and its holistic view of the problems of arid and semiarid zones **Encyclopedia of Global Warming and**

Climate Change, Second Edition S. Cowan,2022-07-28 This book covers the

wider aspects of the microbiology of hot desert soil ecosystems compiling disparate information from a range of relevant desert soil microbial fields The reader learns about microbial ecology of the more dominant and possibly most important desert habitats detailing the phylogenetic and functional diversity of these different habitats as well as their potential role in desert ecosystem ecology Particular attention is also given to microbial stress adaptation in hot desert soils Furthermore it is the first volume in this particular field to cover modern metagenomics technologies that can be applied to studies of all aspects of desert microbial communities Additionally the book explores viruses and viral communities which are among the least studied and little understood components of desert soil microbial communities Particular attention is also given to the

roles of desert microbial communities in biogeochemical cycling of carbon nitrogen and phosphorus Through this book the reader discovers how desert microbiology has been at the forefront of Astrobiology and how it may be used conceptually in future terraforming strategies Desert ecosystems are increasingly coming into focus given the impacts of climate change and desertification trends making this volume particularly timely Each of the chapters is authored by leading international researchers and is a must read for microbial ecologists
