Biogeography, Time and Place: Distributions, Barriers and Islands Willem Renema, 2007-09-07 Biogeography considers the distribution of biological units over a wide range of scales The units range from genotypes populations and species to families and higher taxa Processes can be local such as the isolation on islands due to sea level fluctuations or large scale tectonic processes that separates continents and creates oceans In all processes time is an important factor and by combining data on recent patterns with paleontological data the understanding of the distribution of extant taxa can be improved This volume focuses on speciation due to isolation in island like settings and the evolution of large scale diversity as the result of origination maintenance and extinction

The SE Asian Gateway Robert Hall, Michael Andrew Cottam, Moyra Elizabeth Jane Wilson, 2011 Collision between Australia and SE Asia began in the Early Miocene and reduced the former wide ocean between them to a complex passage which connects the Pacific and Indian Oceans Today the Indonesian Throughflow passes through this gateway and plays an important role in global thermohaline flow The surrounding region contains the maximum global diversity for many marine and terrestrial organisms Reconstruction of this geologically complex region is essential for understanding its role in oceanic and atmospheric circulation climate impacts and the origin of its biodiversity The papers in this volume discuss the Palaeozoic to Cenozoic geological background to Australia and SE Asia collision They provide the background for accounts of the modern Indonesian Throughflow and oceanographic changes since the Neogene and consider aspects of the region's climate history

A Global Atlas of Atolls Walter M. Goldberg, Eugene C. Rankey, 2023-08-29 Scattered like dots rising from the deep across vast expanses of the world's tropical and subtropical oceans atolls with their

turquoise lagoons and reefs teeming with colorful marine life have captured the public imagination. They have also been the homeland of millions of people for millennia as various groups of migrants spread across the far reaches of the Pacific Indian and Western Atlantic regions. Developed from recently available satellite data, *A Global Atlas of Atolls* presents high quality details of 476 atolls across the globe characterizing aspects of the atoll rim, the lagoon, and their coral reef communities in unprecedented detail. In synthesizing and enhancing understanding of these unique seascapes, this volume provides a distinct compendium of descriptions and images as well as documentation of the environmental conditions of winds, waves, and tides, and a summary of the background literature for each atoll area. There is no comparable work. After an introduction that includes a glossary of terms, each atoll is documented in the form of an atlas, written for scientists but accessible to any diver or reader interested in these spectacular reef island habitats. This book also describes some current challenges and perspectives on their future. It will be useful as a reference work for marine scientists while providing a minimum of technical jargon for those who are not scientists but who enjoy reading about exotic places with unusual attributes. An Underwater Guide to Indonesia R. Charles Anderson, 2000-05-01. Too many divers and snorkelers pass their time in a daze, swimming blindly from one big object to the next. They miss out on the myriad beautiful and fascinating small creatures that are there on show for anyone who takes the time to look. The marine life of Indonesia is second to none in terms of both the number of species and diversity of forms. There are more species of fish, coral, and more of almost all marine life groups present in Indonesian waters than in any other country. Here is a colorful and scintillating introduction to an astounding array of marine life that will arouse the interest of marine enthusiasts, divers, and snorkelers alike. The guide includes more than 250 magnificent color photographs that explore the wondrous underwater world of the Indonesian archipelago: essential information on the marine life of the Archipelago, from corals to marine reptiles, sea snails to lobsters, bottomhuggers to pufferfishes, starfish to sea slugs, a comprehensive marine life section that will help readers identify each particular species and its habitat.
