William W. Braham

Ecology Of Architecture:

Culture, Architecture and Nature Sim Van der Ryn, 2013-10-30 Gathering his most compelling essays and addresses from the last fifty years in one accessible volume this book looks at the pioneering ideas that underpin Sim Van der Ryn's ecological design philosophy. It offers a unique decade by decade retrospective of the key issues in environmental design beginning with the most recent years and looking back to the 1960s. With an introductory chapter and further recommended reading for each decade this book is key reading for any architect or designer practising today and students will find a wealth of knowledge with which to support their studies. The author's beautiful illustrations painted in a corresponding timescale to the chapters offer further insight into the way he understands the challenges of humanity's stewardship of our planet.

The Ecology of Architecture Laura C. Zeiher, 1996 Environmentally Conscious Design has become a major interest of architects, designers, planners, public officials and industry leaders around the world. Unlike other books on the subject that focus on only one or another aspect of ecological design, *The Ecology of Architecture* answers the question: How do we design and build ecologically sound and affordable structures today that will perform well tomorrow? Written by an experienced practitioner in the field, the book details all facets of green building by providing comparative energy performance solutions, recycling alternatives, cost considerations, materials analyses, information on legislation as well as examples of practical applications. **BOOK JACKET Title Summary** field provided by Blackwell North America Inc. All Rights Reserved. [Ecology and the Architectural Imagination](#) Brook Muller, 2014-02-24 By including ecological concerns in the design process from the outset, architecture can enhance life. Author Brook Muller understands how a designer's predispositions and poetic judgement in dealing with complex and dynamic ecological systems impact the greenness of built outcomes. *Ecology and the Architectural Imagination* offers a series of speculations on architectural possibility when ecology is embedded from conceptual phases onward: how notions of function and structure of ecosystems can inspire ideas of architectural space making and order; and how the architect's role and contribution can shift through this engagement. As an ecological architect working in increasingly dense urban environments, you can create diverse spaces of inhabitation and connect project scale living systems with those at the neighborhood and region scales. Equipped with ecological literacy, critical thinking and collaboration skills, you are empowered to play important roles in the remaking of our cities. *Sustainable Design* Daniel Edward Williams, 2007 **The Green Braid** Kim Tanzer, Rafael Longoria, 2007-04-11 This volume presents the discipline's best thinking on sustainability in written, drawn and built form, drawing on over fifteen years of peer-reviewed essays and national design awards published by the Association of Collegiate Schools of Architecture (ACSA). Providing a primer on sustainability useful to teachers and students alike, the selected essays address a broad range of issues. Combined with design projects that highlight issues holistically, they promote an understanding of the principles of sustainability and further the integration of sustainable methods into architectural projects. Using essays that alternately revise and clarify twentieth

century architectural thinking The Green Braid places sustainability at the centre of excellent architectural design No other volume addresses sustainability within the context of architectural history theory pedagogy and design making this book an ideal source for architects in framing their practices and therefore their architectural production in a sustainable manner

Ecology, Community and Delight Ian Thompson, 2003-09-02 Ecology Community and Delight examines three principal value systems which influence landscape architectural practice the aesthetic the social and the environmental and seeks to discover the role that the profession should follow

Relational Architectural Ecologies Peg Rawes, 2013-08-22 Examining the complex social and material relationships between architecture and ecology which constitute modern cultures this collection responds to the need to extend architectural thinking about ecology beyond current design literatures This book shows how the habitats natural milieus places or shelters that construct architectural ecologies are composed of complex and dynamic material spatial social political economic and ecological concerns With contributions from a range of leading international experts and academics in architecture art anthropology philosophy feminist theory law medicine and political science this volume offers professionals and researchers engaged in the social and cultural biodiversity of built environments new interdisciplinary perspectives on the relational and architectural ecologies which are required for dealing with the complex issues of sustainable human habitation and environmental action The book provides 16 essays including two visual essays by leading international experts and academics from the UK US Australia New Zealand and Europe including Rosi Braidotti Lorraine Code Verena Andermatt Conley and Elizabeth Grosz A clear structure divided into 5 parts addressing bio political ecologies and architectures uncertain anxious and damaged ecologies economics land and consumption biological and medical architectural ecologies relational ecological practices and architectures An exploration of the relations between human and political life An examination of issues such as climate change social and environmental well being land and consumption economically damaging global approaches to design community ecologies and future architectural practice

Ecologies Design Maibritt Pedersen Zari, Peter Connolly, Mark Southcombe, 2020-07-07 The notion of ecology has become central to contemporary design discourse This reflects contemporary concerns for our planet and a new understanding of the primary entanglement of the human species with the rest of the world The use of the term ecology with design tends to refer to how to integrate ecologies into design and cities and be understood in a biologically scientific and technical sense In practice this scientific technical knowledge tends to be only loosely employed The notion of ecology is also often used metaphorically in relation to the social use of space and cities This book argues that what it calls the biological and social senses of ecology are both important and require distinctly different types of knowledge and practice It proposes that science needs to be taken much more seriously in biological ecologies and that social ecologies can now be understood non metaphorically as assemblages Furthermore this book argues that design practice itself can be understood much more rigorously productively and relevantly if understood ecologically The plural term ecologies design

refers to these three types of ecological design This book is unique in bringing these three perspectives on ecological design together in one place It is significant in proposing that a strong sense of ecologies design practice will only follow from the interconnection of these three types of practice Ecologies Design brings together leading international experts and relevant case studies in the form of edited research essays case studies and project work It provides an overarching critique of current ecologically oriented approaches and offers evidence and exploration of emerging and effective methods techniques and concepts It will be of great interest to academics professionals and students in the built environment disciplines

Buildings Are for People Bill Caplan, 2016-04-30 Buildings are for People Human Ecological Design offers a new approach to the process of conceiving architectural design one that considers the interactions of the built environment with people and the natural environment The book exposes our visceral and experiential connections to buildings and how buildings intervene directly with our ecosystem natural environment and sense of place It brings to light our ability to utilize a building's surfaces shape and materiality to synergize with the energy and forces of nature for a more green and sustainable architecture It points out many of the roadblocks to successful design including issues in education the profession regulation and the industry's institutions providing an awareness that heretofore is rarely discussed Most importantly Buildings are for People Human Ecological Design highlights the obvious that buildings are built for people a fact that seems to have been overlooked in the last half century

Ecological Design Sim Van der Ryn, Stuart Cowan, 1995 This is a book about ecological design which can be defined as any form of design that minimizes environmentally destructive impacts by integrating itself with living processes Ecological design is an integrated ecologically responsible design discipline It helps connect scattered efforts in green architecture sustainable agriculture ecological engineering and other fields Ecological design is both a profoundly hopeful vision and a pragmatic tool By placing ecology in the foreground of design it provides specific ways of minimizing energy and material use reducing pollution preserving habitat and fostering community health and beauty It provides a new way of thinking about design

Eco-architecture C. A. Brebbia, 2006 Unlike the mechanistic buildings it replaces Eco Architecture is in harmony with nature including its immediate environs Eco Architecture makes every effort to minimise the use of energy at each stage of the building's life cycle including that embodied in the extraction and transportation of materials their fabrication their assembly into the building and ultimately the ease and value of their recycling when the building's life is over Featuring papers from the First International Conference on Harmonisation between Architecture and Nature the text brings together papers of an inter disciplinary nature and will be of interest to engineers planners physicists psychologists sociologists economists and other specialists in addition to architects Featured topics include Historical and Philosophical aspects Ecological and Cultural Sensitivity Human Comfort and Sick Building Syndrome Energy Crisis and Building Technologies Carbon Neutral Design Alternative Sources of Energy wind solar wave geothermal etc Design with Nature Design with Climate Siting and Orientation Re use of Brownfield Sites

the author discards many old and tired theories in landscape architecture With detailed documentation she casts off the savannah theory critiques the search for universals reveals the needed role of designers in large scale agriculture abandons the overlay technique of McHarg and introduces the ecological and urban health urgency of public night lighting Margaret Grose presents wide ranging new approaches and shows the importance of learning from science for design of going beyond assumptions of working in multiple rather than single issues of disrupting linear design thinking and of dealing with data This book is written with a clear voice by an ecologist and landscape architect who has led design students into loving ecological science for the support it gives design

Ecological Architecture James Steele, 2005 Charts a rise in environmentally responsible architecture tracing the ways in which architecture has been modified for environmental concerns throughout the past century evaluating twenty case studies involving the works of specific architects or movements and making predictions about future efforts in the area of global urbanization

Habitat Dirk van den Heuvel, 2020 For Dutch see below ENGLISH Today under the pressure of climate change and ecological catastrophe environmentalism has become a key driver to rethink the architectural discipline The publication Habitat Ecology Thinking in Architecture aims to highlight some of the historical sources of ecological approaches that are currently reshaping the architectural field The book will point out the paradigmatic shift in thinking about the built environment as something inherently contextual and relational By demonstrating the continuities disruptions and transformations at stake the book will deepen the ongoing conversations while suggesting directions for future research Based on selections from the archival resources of the national collection of Het Nieuwe Instituut in Rotterdam and with additional materials from international archives the book presents a lavish documentation of design proposals and research projects that map key positions since the 1950s when the idea of habitat was first investigated to reconceptualize architecture and its larger purpose especially in the circles of the CIAM and Team 10

NEDERLANDS In het zicht van de klimaatverandering en de op handen zijnde ecologische catastrofe is milieubewustzijn vandaag de dag een belangrijke reden om de architectonische discipline te heroverwegen Het boek Habitat Ecology Thinking in Architecture belicht sommige van de historische bronnen van de ecologische opvattingen die ten grondslag liggen aan de hervormingen die momenteel plaatsvinden in de architectuur Er wordt aandacht besteed aan de paradigmatische verschuiving in het denken over de gebouwde omgeving als iets dat inherent contextueel en relationeel is Dit boek beschrijft de continue onderbrekingen en transformaties die er aan de orde zijn en intensificeert niet alleen het huidige debat maar biedt ook suggesties voor toekomstig onderzoek Op basis van selecties uit de archieven van de nationale collectie van Het Nieuwe Instituut in Rotterdam en aanvullend materiaal uit internationale archieven wordt in dit boek een uitgebreide documentatie van ontwerpvoorstellen en onderzoeksprojecten gepresenteerd Het biedt een overzicht van sleutelposities sinds de jaren 1950 toen het concept habitat voor het eerst werd onderzocht in een poging de architectuur en haar doel in het algemeen te heroverwegen met name in de kringen van het CIAM en Team 10

uitgeversinformatie **Design Ecologies** Lisa Tilder, Beth Blotstein, 2012-03-20 Contemporary architects are under increasing pressure to offer a sustainable future But with all the focus on green building there has been little investigation into the meaningful connections between architectural design ecological systems and environmentalism A new generation of architects landscape architects designers and engineers aims to recalibrate what humans do in the world according to how the world works as a biophysical system Design in this sense is a larger concept having to do as much with politics and ethics as with aesthetics and technology This recasting of the green movement for the twenty first century transforms design into a positive agent balancing societal values with environmental needs Design Ecologies is a ground breaking collection of never before published essays and case studies by today's most innovative designers and critics Their design strategies social material and biological run the gamut from the intuitive to the highly technological One essay likens window unit air conditioners in New York City to weeds in order to spearhead the development of potential design solutions Latz Partner's Landscape Park integrates vegetation and industry in an urban park built amongst the monumental ruins of a former steelworks in Duisburg Nord Germany The engineering firm Arup presents its thirty three square mile masterplan for Dongtan Eco City an energy independent city that China hopes will house half a million people by 2050 An essay by designer Bruce Mau leads off a stellar list of emerging designers including Jane Amidon Blaine Brownell David Gissen Gross Max Robert Sumrell and Kazys Varnelis Stephen Kieran and James Timberlake R Sie n Studio 804 and WORKac **Architecture and Systems Ecology** William W. Braham, 2015-08-11 Modern buildings are both wasteful machines that can be made more efficient and instruments of the massive metropolitan system engendered by the power of high quality fuels A comprehensive method of environmental design must reconcile the techniques of efficient building design with the radical urban and economic reorganization that we face Over the coming century we will be challenged to return to the renewable resource base of the eighteenth century city with the knowledge technologies and expectations of the twenty first century metropolis This book explores the architectural implications of systems ecology which extends the principles of thermodynamics from the nineteenth century focus on more efficient machinery to the contemporary concern with the resilient self organization of ecosystems Written with enough technical material to explain the methods it does not include in text equations or calculations relying instead on the energy system diagrams to convey the argument Architecture and Systems Ecology has minimal technical jargon and an emphasis on intelligible design conclusions making it suitable for architecture students and professionals who are engaged with the fundamental issues faced by sustainable design The energy systems language provides a holistic context for the many kinds of performance already evaluated in architecture from energy use to material selection and even the choice of building style It establishes the foundation for environmental principles of design that embrace the full complexity of our current situation Architecture succeeds best when it helps shape accommodate and represent new ways of living together **Towards an Ecology of Tectonics** Claus Bech-Danielsen, 2014 Ecology is in this

Histories of Ecological Design Lydia Kallipoliti, 2023-05-31 This book documents the intersection of architecture and design with ecology environmental history policy governance and law from the 19th century to today It presents conflicting definitions and concepts of architects and designers and the parallel histories of their intellectual positions toward environmental throughout time There have been many accounts on the history of ecology and others on the migration of ecological thought to design and architecture practice Yet the work of a focused and expanded history of ecological design is much needed This book presents conflicting definitions and concepts of architects and designers and the parallel histories of their intellectual positions toward environmental thought from the 19th century to today To survey the formation of this field the history of ecological design will be not be exclusively examined chronologically but also in connected worldviews each rendering evolving perceptions of nature its relation to culture and the occupation of the natural world by human and non human subjects
