Searle, 1995 In tropical developing countries farmers tend to grow a wide range of crops in a small area for subsistence or sale To make full use of often limited resources a good understanding of how

environmental conditions affect the characteristics and performance of these crops is essential. This book considers the response of tropical food crops to environmental factors such as climate, soil, and farming system. Three types of crop are considered: cereals, legumes, and non-cereal energy crops, with individual chapters on the four most important crops in each group. This material is set in context by introductory chapters on tropical farming systems, tropical climates, and tropical soils. This new updated edition retains the successful formula of the first edition and will serve the needs of advanced students of tropical agriculture as well as professionals engaged in research and extension work in tropical crop production.

Crop Adaptation to Climate Change Shyam Singh Yadav, Robert J. Redden, Jerry L. Hatfield, Hermann Lotze-Campen, Anthony E. Hall, 2011-08-02. A major task of our time is to ensure adequate food supplies for the world's current population now nearing 7 billion in a sustainable way while protecting the vital functions and biological diversity of the global environment. The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming and as the population continues to grow. Current projections suggest that the world's temperatures will rise 1.8–4.0°C by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid-century after which it may stabilize. This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems particularly in regard to genetics to the changing conditions. Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions. The first two sections provide a foundation on the factors involved in climate stress, assessing current climate change by region, and covering crop physiological responses to these changes. The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change. Written by an international team of authors, Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply and is an essential resource for academics, researchers, and professionals in the fields of crop science, agronomy, plant physiology, and molecular biology, crop consultants and breeders, as well as climate and food scientists.

Ecology of Arable Land – Perspectives and Challenges M. Clarholm, L. Bergström, 2012-12-06. Agriculture in the industrial world has gone through a common interest of the contributors is increasing through dramatic changes over the past decades. Increasing the understanding of the turnover of carbon. Mechanization in combination with high inputs of and inorganic nutrients in terrestrial ecosystems, fertilizers, and pesticides has turned deficits of agricultural products into surplus. Over the same directions depending on their interests and experience, we have experienced increased environmental perturbation. Difficulties are identified in the quantification of problems in both the atmosphere and our water table, of below-ground production where death and resources which have been associated with the regrowth if incorporated into the calculations, changes in management practices can change production figures considerably. Concern about the potential pollution by compared to values derived from peak estimates, nitrogen fertilizers as well as

the low utilization The role of root derived carbon is investigated in efficiency of applied nitrogen by plants has created relation to nutrient competition between roots and a need for a better understanding of nitrogen microorganisms the cost of N₂ fixation and the cycling in the plant soil water system To achieve decomposition of organic nitrogen Mycorrhizae this it is necessary to study process interactions use root derived carbon and their roles in phos and process regulation in an ecosystem context phorus conservation and in supplying nutrients to During the last decade many ecosystem studies the host are exemplified

Agricultural Plants R. H. M. Langer, G. D. Hill, 1991-11-14 The future of mankind depends on ever increasing agricultural production to provide food fibre fuel and other essential commodities This can only be achieved through a sound knowledge of the plants which feature prominently in agriculture This book describes these plants in detail together with the products which are obtained from them The opening chapter on world population and food supply is followed by a general introduction to plant structure The major part of the book then considers economically important field crops and pasture plants of temperate and subtropical regions on a family by family basis Fruit crops flowers and trees are not considered The book concludes with a discussion of physiological principles of crop growth and yield This is an introductory text suitable for the teaching of agricultural botany to undergraduate students and is intended to bridge the gap between classical botany and agronomy

The Future of Amazonia A. Hall, D. Goodman, 1991-01-12 The future of Brazilian Amazonia the world's largest remaining tropical rainforest hangs in the balance Two decades of destructive development have provoked violent struggles for control over the region's resources with disastrous social and environmental consequences This multi disciplinary collection reviews past experience but focusses on the latest phase of Amazonian settlement Chapters by leading authorities examine such issues as colonisation in the most recent frontier areas multinational mining projects hydro electric schemes and the military occupation of Brazil's borders After demonstrating how new government and business activities have exacerbated social tensions and ecological destruction the volume considers alternative more sustainable strategies
