The Econocracy Joe Earle, Cahal Moran, Zach Ward-Perkins, 2017-07-06 A century ago the idea of the economy didn't exist Now economics is the supreme ideology of our time with its own rules and language The trouble is most of us can't speak it This is damaging democracy Dangerous agendas are hidden inside mathematical wrappers controversial policies are presented as proven by the models of economic science Government is being turned over to a publicly unaccountable technocratic elite The Econocracy reveals that economics is too important to

be left to the economists and shows us how we can begin to participate more fully in the decisions which affect all our futures

Reclaiming economics for future generations Lucy Ambler, Joe Earle, Nicola Scott, 2022-01-25 Today's economies fail to recognise that we are in a rapidly worsening crisis reproducing and often worsening vast and harmful inequalities between people and countries. The current models are unsustainable and at a time when global temperatures are rising and divides are deepening humanity is left in a rapidly worsening situation of its own making the destruction of the living world which will make large parts of the earth uninhabitable. Without access to the knowledge skills or tools to build a better future local national and global economies will continue to fail to address the interlinked challenges of systemic racism inequalities faced by women the Covid 19 pandemic and the nature and climate emergency. Across the world economics students are coming together under the banner of the student movement Rethinking Economics to create a better economics one which can help to create a world where all our children can flourish regardless of their gender background or birthplace. Drawing on over sixty interviews with students and professionals from identities and backgrounds marginalised in economics and a wide range of global and historical research this book illustrates the ways in which the discipline is currently not fit for purpose and sets out a vision for how it can be diversified decolonised and democratised. The struggle to reclaim economics could not be more crucial our futures depend on it. This book explains how it can be done. [Economics and Climate Emergency](#) Barry Gills, Jamie Morgan, 2022-08-22 This book explores a series of connected themes focused on the role economics and other influential forms of theory and thinking have played in creating the current predicament and the scope for alternatives and how they might be framed. Thirty years have passed since the inception of the United Nations Framework Convention on Climate Change UNFCCC and the beginning of policy on climate change. Thirty wasted years. To most politicians long term collective interest has been denominated in meaningless units of time a never and forever that has continually delayed action. From complacency has come potential disaster and we are now living in a time of climate emergency and ecological breakdown. The next decade is a pivotal period requiring fundamental change. But numerous impediments remain. Continual material energy and economic growth on a planetary scale are manifestly impossible and yet economic theory takes these as a given and political leadership and policy seem unwilling to accept brute reality. Instead they offer a series of implausible commitments and pledges rooted in technofixes without addressing the fundamental drivers of the problems the world faces. The edited volume explores the issues and offers a variety of ways to think through the problems at hand from postgrowth degrowth and social ecological economics to policy assemblage and transversalism. The chapters in this book were originally published in the journal *Globalizations*. *Green Economics* David Burningham, John Davies, 1999 This text is part of a series

endeavour to follow the prohibition of riba charging of any kind of interest This will be contrasted with the impact of interest and debt financing in the contemporary non Islamic economies arguing that debt financing of businesses promotes greater rates of bankruptcy over the business cycle and that the charging of interest on loans for current consumption purposes will over time increase inequality and inequitable concentration of wealth in societies where it is practised It will also be shown how in a system without predetermined interest charges problems of exponentially exploding government debt could largely and neatly be avoided by linking bondholder rewards to levels of fiscal proceeds of states This book will be of significant interest to readers in ethics moral philosophy and political economy as well as to policymakers and thinkers grappling with issues around debt burdens public and private inequality and fairness
