## **Enterprise Service Bus Theory In Practice:**

Enterprise Service Bus David A Chappell, 2004-06-25 Large IT organizations increasingly face the challenge of integrating various web services applications and other technologies into a single network. The solution to finding a meaningful large scale architecture that is capable of spanning a global enterprise appears to have been met in ESB or Enterprise Service Bus. Rather than conform to the hub and spoke architecture of traditional enterprise application integration products, ESB provides a highly distributed approach to integration with unique capabilities that allow individual departments or business units to build out their integration projects in incremental digestible chunks, maintaining their own local control and autonomy while still being able to connect together each integration project into a larger more global integration fabric or grid. Enterprise Service Bus offers a thorough introduction and overview for systems architects, system integrators, technical project leads, and CTO/CIO level managers who need to understand, assess, and evaluate this new approach. Written by Dave Chappell, one of the best known and authoritative voices in the field of enterprise middleware and standards based integration, the book drills down into the technical details of the major components of ESB, showing how it can utilize an event driven SOA to bring a variety of enterprise applications and services built on J2EE, .NET, C/C++, and other legacy environments into the reach of the everyday IT professional. With Enterprise Service Bus, readers become well versed in the problems faced by IT organizations today, gaining an understanding of how current technology deficiencies impact business issues. Through the study of real world use cases and integration patterns drawn from several industries using ESB, including Telcos, financial services, retail, B2B exchanges, energy, manufacturing, and more, the book clearly and coherently outlines the benefits of moving toward this integration strategy. The book also compares ESB to other integration architectures, contrasting their inherent strengths and limitations. If you are charged with understanding, assessing, or implementing an integration architecture, Enterprise Service Bus will provide the straightforward information you need to draw your conclusions about this important disruptive technology.

Advances in Service-Oriented and Cloud Computing Carlos Canal, Massimo Villari, 2013-12-13 This book contains the proceedings of the five high quality workshops organized at the Second European Conference on Service Oriented and Cloud Computing (ESOCC 2013) held in Malaga, Spain, in September 2013. The workshops are: Cloud for IoT (CLIoT 2013), CLOUD Storage Optimization (CLOUSO 2013), 12th International Workshop on Foundations of Coordination Languages and Self Adaptive Systems (FOCLASA 2013), First Workshop on Mobile Cloud and Social Perspectives (MoCSOP 2013), and the 3rd International Workshop on Adaptive Services for the Future Internet (WAS4FI 2013). The 29 papers presented were carefully reviewed and selected from 51 submissions. They focus on specific topics in service oriented and cloud computing domains: cloud environments, smart connectivity, context aware computation, cloud for IoT, storage clouds, coordination languages, formal approaches to modeling and reasoning, self systems, services for mobile devices, wireless sensor networks.

**Essential Software Architecture** Ian Gorton, 2011-04-27

Job titles like Technical Architect and Chief Architect nowadays abound in software industry yet many people suspect that architecture is one of the most overused and least understood terms in professional software development Gorton's book tries to resolve this dilemma It concisely describes the essential elements of knowledge and key skills required to be a software architect The explanations encompass the essentials of architecture thinking practices and supporting technologies They range from a general understanding of structure and quality attributes through technical issues like middleware components and service oriented architectures to recent technologies like model driven architecture software product lines aspect oriented design and the Semantic Web which will presumably influence future software systems This second edition contains new material covering enterprise architecture agile development enterprise service bus technologies RESTful Web services and a case study on how to use the MeDICi integration framework All approaches are illustrated by an ongoing real world example So if you work as an architect or senior designer or want to someday or if you are a student in software engineering here is a valuable and yet approachable knowledge source for you

**Enterprise Interoperability III** Kai Mertins, Rainer Ruggaber, Keith Popplewell, Xiaofei Xu, 2008-03-25 Interoperability the ability of a system or a product to work with other systems or products without special effort from the user is a key issue in manufacturing and industrial enterprise generally It is fundamental to the production of goods and services quickly and at low cost at the same time as maintaining levels of quality and customisation Composed of over 50 papers Enterprise Interoperability III ranges from academic research through case studies to industrial and administrative experience of interoperability The international nature of the authorship continues to broaden Many of the papers have examples and illustrations calculated to deepen understanding and generate new ideas A concise reference to the state of the art in software interoperability Enterprise Interoperability III will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment

Youakim Badr,2023-05-16 This book provides a holistic overview of the major advances that have been made in the context of Service Science with a focus on IT enabled services To address challenges in collaborative social centric ad hoc dynamic and open environments the book studies IT enabled service systems from two distinct but complementary research perspectives service engineering and service computing From a service engineering view the book shows how to apply a systemic approach to tackle social problems from holistic and multi disciplinary perspectives by focusing on service systems and developing a service design framework including socio technical aspects the service reference model data driven collaboration processes the incremental design method requirement propagation and system adaptability with feedback loops From a service computing view the book introduces a service oriented aided infrastructure to support IT enabled service systems in ICT facilitated environments and provide access to tangible and intangible resources in a trustworthy environment The book offers a valuable companion and comprehensive reference guide for undergraduate and graduate students who want to learn about current concepts for designing and implementing service systems and for researchers who want to identify future directions in build smart digital service ecosystems integrating Internet of Things IoT and Artificial Intelligence AI and cyber security The book also appeals to developers who need to implement advanced services and want to capitalize on corresponding business models customer driven interaction and scalable architectures *Service-Oriented and Cloud Computing* Flavio De Paoli,Ernesto Pimentel,Gianluigi Zavattaro,2012-08-23 This book constitutes the refereed

proceedings of the First European Conference on Service Oriented and Cloud Computing ESOC held in Bertinoro Italy in September 2012 The 12 full papers 3 short papers and 3 poster papers were carefully reviewed and selected from 57 submissions The volume also contains 7 papers from the industrial track The papers cover the following topics cloud computing service quality and analysis service composition and evolution composition security modeling adaption

**Databases in Networked Information Systems** Aastha Madaan,Shinji Kikuchi,Subhash Bhalla,2013-03-19 This book constitutes the refereed proceedings of the 8th International Workshop on Databases in Networked Information Systems

DNIS 2013 held in Aizu Wakamatsu Japan in March 2013 The 22 revised full papers presented were carefully reviewed and selected for inclusion in the book The workshop generally puts the main focus on data semantics and infrastructure for information management and interchange The papers are organized in topical sections on cloud based database systems information and knowledge management information extraction from data resources bio medical information management and networked information systems infrastructure

**Service Oriented Enterprises** Setrag Khoshafian,2016-04-19

Extending beyond the technical architecture to the very philosophy of how a business should operate the Service Orientation approach establishes fluidity across boundaries to provide agility transparency and fundamental competitive advantage Service Oriented Enterprises brings the concept of service orientation from the IT department to the boardroom applying the precepts of service oriented technology to the underlying dynamics of how a business operates Implementing a technological concept as a cultural paradigm the SOE succeeds by combining the best features from virtual extended real time and resilient enterprises to serve not just its customers but also its trading partners shareholders and employees Building primarily on the success of the Internet and the automation of business policies and processes the Service Oriented Enterprise SOE is defined by three essential layers the enterprise performance layer the business process management layer and the underlying service oriented architecture This book focuses primarily on layers two and three and how the fundamental dynamics of a business can be altered when these concepts are applied to both architecture and culture Beginning with an overview of the emerging SOE culture the text contrasts the new service oriented methodologies with traditional waterfall and iterative methodologies Emphasizing Web Service strategies for description discovery and deployment techniques the author goes deeper into service oriented concepts describing the business process management suite as the central core of the SOE and introducing the Enterprise Service Bus as the backbone for integration The text describe how modeling executing and continuously improving the business process and business policies lends to the development of a common language between business and IT The book concludes by expanding on these concepts and delving into the societal and behavioral aspects of the Service Oriented Enterprise The reality of business is no longer one where change is an unusual phenomenon today change is the norm and the capacity for consumer sensitive fluid transition is vital to business survival Service Oriented Enterprises provides the key concepts to facilitate that change

**Evolutionary Based Solutions for Green Computing** Samee Ullah Khan,Joanna Kołodziej,Juan Li,Albert Y.

Zomaya,2012-08-14 Today s highly parameterized large scale distributed computing systems may be composed of a large number of various components computers databases etc and must provide a wide range of services The users of such systems located at different geographical or managerial network cluster may have a limited access to the system s services and resources and different often conflicting expectations and requirements Moreover the information and data processed in such dynamic environments may be incomplete imprecise fragmentary and overloading All of the above mentioned issues require some intelligent scalable methodologies for the management of the whole complex structure which unfortunately may increase the energy consumption of such systems An optimal energy utilization has reached to a point that many information technology IT managers and corporate executives are all up in arms to identify scalable solution that can reduce electricity consumption so that the total cost of operation is minimized of their respective large scale computing systems and simultaneously improve upon or maintain the current throughput of the system This book in its eight chapters addresses the fundamental issues related to the energy usage and the optimal low cost system design in high performance green computing systems The recent evolutionary and general metaheuristic based solutions for energy optimization in data processing scheduling resource allocation and communication in modern computational grids could and network computing are presented along with several important conventional technologies to cover the hot topics from the fundamental theory of the green computing concept and to describe the basic architectures of systems This book points out the potential application areas and provides detailed examples of application case studies in low energy computational systems The development trends and open research issues are also outlined All of those technologies have formed the foundation for the green computing that we know of today
