**Local Environmental Struggles** Kenneth A. Gould, Kenneth Gould, Allan Schnaiberg, Adam S. Weinberg, 1996-07-13 In recent years environmentalism in the US has increasingly emerged at the community level focusing on local ecological problems Correspondingly the American environmental movement has exhorted its supporters to think globally but act locally The authors examine this modern environmental mantra by analysing the opportunities and constraints on local environmental action posed by economic and political structures at all levels The difficulties involved in local activism are explored in three case studies a wetlands protection project water pollution of the Great Lakes and consumer waste recycling The final chapter then reflects on the challenges facing citizen worker movements in each case study and concludes that despite the inherent difficulties any successful attempt at mobilisation must have a local component

*Environment and Society* Erika Cudworth, 2005-08-04 At the start of the twenty first century it can be argued that human societies have a greater impact on the environment than ever before We have always been dependent upon and interacted with the natural environment However the dramatic social changes of the past three centuries have altered the form of our relationship with non human nature to the extent that some would see people planet relations as in a situation of crisis Environment and Society provides a comprehensive and critical account of the ways in which we can think about the relationship between human societies and the environments with which they interact It argues that human societies are ecologically embedded and that environments are often socially embedded and constituted It makes the different theoretical positions and empirical studies accessible to students and includes chapter outlines and summaries annotated further reading boxed case studies

Where does the environment leave off and society begin When expanding production and consumption drives greenhouse gas emissions that warm the planet which in turn influence the conditions of economic expansion it is unclear where the climate ends and the economy begins This fact is not new to our era however our social and natural sciences have only recently come to grips with the incredible complexity of the world described by understanding the environment and society as being of a piece As a result in the last decade there has been an unprecedented explosion of new concepts theories facts and techniques that follow from such an understanding The Encyclopedia of Environment and Society brings together multiplying issues concepts theories examples problems and policies with the goal of clearly explicating an emerging way of thinking about people and nature With more than 1 200 entries written by experts from incredibly diverse fields this innovative resource is a first step toward diving into the deep pool of emerging knowledge The five volumes of this Encyclopedia represent more than a catalogue of terms Rather they capture the spirit of the moment a fascinating time when global warming and genetic engineering represent only two of the most obvious examples of socio environmental issues

Dale, Mary R. English, 2012-11-26

Environmental decision making is like politics mostly local In fact making decisions about the environment at the subnational level in state regional and local jurisdictions is a lot like politics For resolving environmental issues demands but often resists a balance between deeply held feelings and stark confrontations among opposing views This volume describes tools that should make the decision maker's lot a bit more tolerable The authors would be the last to suggest that these decision aiding tools will somehow bring a benign order to issues that reach to people's fundamental values What they can help do is to keep the debate focused on the important issues to serve up useful options and to narrow the range of disagreement Even this is a challenging assignment Still why bother The chief reason is that the locus of environmental decision making has in the past decade or so shifted from the national to the subnational level a convenient if colorless term to denote the hurly burly of environmental controversy outside the Washington Beltway For example New England has taken a regional stand on tropospheric ozone control and California requires automotive pollution controls that some other jurisdictions have partially adopted This shift is a profound but not unexpected result of the way environmental policy has evolved since the modern environmental movement began around the late 1960s Back then the pendulum was swinging the other way     **Environmental Sociology** Leslie King, Deborah McCarthy Auriffeille, 2009-03-16 Environmental Sociology
