Biometeorology for Adaptation to Climate Variability and Change Kristie L. Ebi, Ian Burton, Glenn McGregor, 2008-12-17 Biometeorology continues to grow as a discipline It is increasingly recognised for its importance in providing science of relevance to society and well being of the environment This book is the first in a new book series on Biometeorology The purpose of the new series is to communicate the interdisciplinary philosophy and science of biometeorology to as wide an audience as possible introduce scientists and policy makers to the societal relevance of and recent developments in its fields and demonstrate how a biometeorological approach can provide insights to the understanding and possible solution of cross cutting environmental issues One such cross cutting environmental issue is climate change While the literature on the science of climate change climate change mitigation and the impacts of climate change is voluminous that on adaptation to climate change is meagre in comparison The purpose of this book is to partly redress this imbalance by providing insights from a biometeorological perspective The book acknowledges that society has a long history of adapting to the impacts associated with climatic variability and change but makes the point that climate change poses a real threat to already strained coping systems Therefore there is a need to realign human use systems with changing climate conditions

Tourist Experience Richard Sharpley, Philip R. Stone, 2010-10-04 To consume tourism is to consume experiences An understanding of the ways in which tourists experience the places and people they visit is therefore fundamental to the study of the consumption of tourism Consequently it is not surprising that attention has long been paid in the tourism literature to particular perspectives on the tourist experience including demand factors tourist motivation typologies of tourists and issues related to authenticity commodification image and perception However as tourism has continued to expand in both scale and scope and as tourists needs and expectations have become more diverse and complex in response to transformations in the dynamic socio cultural world of tourism so too have tourist experiences Tourist Experience provides a focused analysis into tourist experiences that reflect their ever increasing diversity and complexity and their significance and meaning to tourists themselves Written by leading international scholars it offers new insights into emergent behaviours motivations and sought meanings on the part of tourists based on five contemporary themes determined by current research activity in tourism experience dark tourism experiences experiencing poor places sport tourism experiences writing the tourist experience and researching tourist experiences methodological approaches The book critically explores these experiences from multidisciplinary perspectives and includes case studies from a wide range of geographical regions By analyzing these contemporary tourist experiences the book will provide further understanding of the consumption of tourism

Wayfinding Behavior Reginald G. Golledge, 1999-01-14 The metaphor of a cognitive map has attracted wide interest since it was first proposed in the late 1940s Researchers from fields as diverse as psychology geography and urban planning have explored how humans process and use spatial information often with the view of explaining why people make wayfinding

errors or what makes one person a better navigator than another Cognitive psychologists have broken navigation down into its component steps and shown it to be an interplay of neurocognitive functions such as spatial updating and reference frames or perception action couplings But there has also been an intense debate among biologists over whether animals have cognitive maps or have other forms of internal spatial representations that allow them to behave as if they did Yet until now little has been done to relate research on human and non human subjects in this area In *Wayfinding Behavior Cognitive Mapping and Other Spatial Processes* Reginald Golledge brings together a distinguished group of scholars to offer a unique and comprehensive survey of current research in these diverse fields Among the common themes they discover is the psychologists black box approach in which the internal mechanisms of spatial perception and route planning are modeled or constructed like metaphors based on the behavioral evidence Cognitive neuroscientists on the other hand have attempted to discover the neurocognitive basis for spatial behavior They have shown for example that damage in the hippocampus system invariably impairs the ability of animals and humans to learn about remember and navigate through environments and studies in humans show that neurons in this system code for location direction and distance thereby providing the elements needed for a mapping system Artificial intelligence and robotics theorists attempt to construct intelligent mapping systems using computer technology In these areas there is growing evidence that as in human wayfinding processes useful representations cannot be achieved without sacrificing completeness and precision *Wayfinding Behavior Cognitive Mapping and Other Spatial Processes* offers not only state of the art knowledge about wayfinding but also represents a point of departure for future interdisciplinary studies The more we know concludes volume editor Reginald Golledge about how humans or other species can navigate wayfind sense record and use spatial information the more effective will be the building of future guidance systems and the more natural it will be for human beings to understand and control those systems

[Urban Memory in City Transitions](#) Ali Cheshmehzangi, 2021-04-02 As a continuation of *Identity of Cities and City of Identities* this book covers the arguments around the memory experience cognition nexus concerning palimpsests and urban places As cities experience transitional phases of growth development decline and decay the author urges considering the notion of urban memory in place making strategies and design decision making processes These explorations would add value to primary fields of architecture architectural history cognitive science human geography and urbanism Divided into eight chapters this book puts together a comprehensive knowledge of urban memory in city transitions By studying urban memory the author delves into conceptions of mental mapping knowledge of environments cognition of places and the perceptual dimension of urbanism Undoubtedly urban memory plays a significant part in the future movements of humanistic urbanism Given the significances of scale pace and mode of city transitions globally we should remember who are the ultimate users of those living environments Therefore in this book the author debates two contradictions of memory of place vs place of memory and significance of place vs place of significance Each of these is believed to be a paradox of its own

indicating places are significant through the systematic networks of cities memories are meaningful through the neural information processing and place memories are the essence of urban identities The book s ultimate goal is to demonstrate the effectiveness of the space time frame of place in making memorable places Through the comprehensive explorations of many global examples we can evaluate the significance of place in mind more carefully This is narrated based on the recognition of nostalgia in cities socio temporal qualities in places and the network of processes in our minds In return the aim is to provide new knowledge to make memorable cities enhance social experiences and capture and value the significance of place in mind
