Information Systems and the Environment National Academy of Engineering, 2001-09-13 Information technology is a powerful tool for meeting environmental objectives and promoting sustainable development This collection of papers by leaders in industry government and academia explores how information technology can improve environmental performance by individual firms collaborations among firms and collaborations among firms government agencies and academia Information systems can also

be used by nonprofit organizations and the government to inform the public about broad environmental issues and environmental conditions in their neighborhoods Several papers address the challenges to information management posed by the explosive increase in information and knowledge about environmental issues and potential solutions including determining what information is environmentally relevant and how it can be used in decision making In addition case studies are described and show how industry is using information systems to ensure sustainable development and meet environmental standards The book also includes examples from the public sector showing how governments use information knowledge systems to disseminate best practices beyond big firms to small businesses and from the world of the Internet showing how knowledge is shared among environmental advocates and the general public *Transnational Politics of the Environment* Liliana B. Andonova, 2003-11-21 A study of the effect of EU membership on Central and Eastern European environmental policy and the interplay of political incentives and industry behavior that determines policy In *Transnational Politics of the Environment* Liliana Andonova examines the effect of the European Union EU on the environmental policies of Bulgaria the Czech Republic and Poland Compliance with EU environmental regulations is especially onerous for Central and Eastern European countries because of the costs involved and the legacy of pollution from communist era industries But Andonova argues that EU integration has a positive impact on environmental policies in these countries by exerting a strong influence on the environmental interests of regulated industries With her empirical study of chemical safety and air pollution policies from 1990 to 2000 she shows that export competitive industries such as the chemical industry that would benefit from economic integration have an incentive to adopt EU norms By contrast industries such as electric utilities that primarily serve the domestic market remain opposed to EU environmental standards and must be prodded by their own governments to implement environmental protection measures These differences in domestic interests greatly influence the course of reforms and the adoption of EU standards *Transnational Politics of the Environment* challenges the current focus on intergovernmental cooperation between East and West by highlighting the roles of industries transnational norms and domestic institutions in promoting change in environmental regulation It offers a generalizable framework for understanding the politics of environmental regulation in emerging market economies and helps bridge the divide between the study of domestic and international environmental politics Kansas City, Midwest Service Center, Kansas City (KS,MO) ,1979
