Environmental Crisis Understanding The Value Of Nature:

Environmental Crisis M. Rowlands, 2000-06-05 The worst chemical disaster ever could be happening right now In India and Bangladesh between forty and eighty million people are at risk of consuming too much arsenic from well water that might have already caused one hundred thousand cancer cases and thousands of deaths Many millions elsewhere in South East Asia and South America may soon suffer a similar fate *Venomous Earth* is the story of this tragedy the geology the biology the politics and the history It starts in Ancient Greece touches down in today s North America and takes in William Morris alchemy farming medicine mining and a cosmetic that killed two popes

Alienation and Nature in Environmental Philosophy Simon Hailwood, 2015-08-21 This book explores interpretations of alienation from nature in relation to a broad range of environmental issues

Ecologies of Grace Willis Jenkins, 2008-02-04 In *Ecologies of Grace* Willis Jenkins presents a field shaping introduction to Christian environmental ethics Observing how religious environmental practices often draw on concepts of grace Jenkins maps the way Christian environmental strategies draw from traditions of salvation as they engage the problems of environmental ethics

A World Not Made for Us Keith R. Peterson, 2020-09-01 In *A World Not Made for Us* Keith R Peterson provides a broad reassessment of the field of environmental philosophy taking a fresh and critical look at three classical problems of environmentalism the intrinsic value of nature the need for an ecological worldview and a new conception of the place of humankind in nature He makes the case that a genuinely critical environmental philosophy must adopt an ecological materialist conception of the human a pluralistic value theory that emphasizes the need for value prioritization and a stratified categorial ontology that affirms the basic principle of human asymmetrical dependence on more than human nature Integrating environmental ethics with the latest work in political ecology Peterson argues it is important to understand that the world is not made for us and that coming to terms with this fact is a condition for survival in future human and more than human communities of liberation and solidarity

Biotechnology and the Integrity of Life Michael Hauskeller, 2016-04-15 There are things that can be done and are done to life on earth whether it be human animal or plant life which even if they do not involve or produce any suffering are still considered morally wrong by a large proportion of the public Such things include changing the nature of living beings by means of genetic engineering in order to enhance their health or more likely with animals and plants their utility or impairing their ability to live autonomously or unduly instrumentalizing them Yet many scientists are puzzled about the unwillingness of the public to feel much enthusiasm about a technology that in their view promises great benefits to humans and does not seem to cause more harm to animals than other practices which most of us do not question at all In this book Michael Hauskeller takes public fears seriously and offers the idea of biological integrity as a clarifying principle which can then be analyzed to show that seemingly irrational public concerns about genetic engineering are not so irrational after all and that a philosophically sound justification of those concerns can indeed be given

Externalism Mark Rowlands, 2014-12-18 It is commonly held that our thoughts beliefs

desires and feelings the mental phenomena that we instantiate are constituted by states and processes that occur inside our head The view known as externalism however denies that mental phenomena are internal in this sense The mind is not purely in the head Mental phenomena are hybrid entities that straddle both internal state and processes and things occurring in the outside world The development of externalist conceptions of the mind is one of the most controversial and arguably one of the most important developments in the philosophy of mind in the second half of the twentieth century Yet despite its significance most recent work on externalism has been highly technical clouding its basic ideas and principles Moreover very little work has been done to locate externalism within philosophical developments in both analytic and continental traditions In this book Mark Rowlands aims to remedy both these problems and present for the reader a clear and accessible introduction to the subject grounded in wider developments in the history of philosophy Rowlands shows that externalism has significant and respectable historical roots that make it much more important than a specific eruption that occurred in late twentieth century analytic philosophy

The Ecological Crisis and the Logic of Capital Xueming Chen, 2017-09-11 The worsening environmental crisis has become a serious threat to mankind The search for a solution to this crisis must begin by understanding its causes Taking an eco socialist perspective *The Ecological Crisis and the Logic of Capital* explores the logic of capitalism as a fundamental cause of today's environmental crisis in particular the thirst for profit and the capitalist mode of production By demonstrating the inherent antagonism between capital and ecology this book argues that proposals to resolve the crisis within the capitalist system are utopian that proposed remedies relying on scientific progress alternative energies low carbon technologies or the introduction of ecological ethics and new attitudes toward Nature into market mechanisms are doomed to failure without a radical overhaul of the principles that govern capitalism

Understanding Environmental Issues Susan Buckingham, Mike Turner, 2008-05-13 *Understanding Environmental Issues* provides an excellent foundation for developing critical thinking about contemporary environmental concerns and the ways in which these are debated represented and managed The book should achieve its aim of stimulating students to engage with how ideas of sustainability and environmental justice can be applied both in policy and in practical action Gordon Walker Lancaster Environment Centre Lancaster University The arena of environmental issues is a minefield for undergraduate students seeking clarity about key problems and solutions This is where *Understanding Environmental Issues* will play a major role providing a stimulating guide through the wealth of material and complex ideas In particular the unification of social and physical science in the case studies provides a holistic approach to the subject that is essential for students and a refreshing innovation for environmental textbooks Anna R Davies Trinity College University of Dublin There is now an unprecedented interest in and concern about environmental problems *Understanding Environmental Issues* explains the science behind these problems as well as the economic political social and cultural factors which produce and reproduce them This book Explains clearly and concisely the science and social science necessary to understand environmental issues

Describes in section one the philosophies values politics and technologies which contribute to the production of environmental issues Uses cases on climate change waste food and natural hazards in section two to provide detailed illustration and exemplification of the ideas described in section one The conclusion a case study of Mexico City draws together the key themes Vivid accessible and pedagogically informed Understanding Environmental Issues will be a key resource for undergraduate and taught postgraduate students in Geography Environment and Ecology as well as students of the social sciences with an interest in environmental issues Understanding Human Ecology Geetha Devi T. V.,2019-01-15 This book examines the domain of human agency environment interaction from a multidimensional point of view It explores the human environment interface by analysing its ethical political and epistemic aspects the value aspects that humans attribute to their environment the relations of power in which the actions and their consequences are implicated and the meaning of human actions in relation to the environment The volume delineates the character of this domain and works out a theoretical framework for the field of human ecology This book will be a must read for students scholars and researchers of environmental studies human ecology development studies environmental history literature politics and sociology It will also be useful to practitioners government bodies environmentalists policy makers and NGOs The Nature of Environmental Stewardship Johnny Wei-Bing Lin,2016-12-29 Environmental issues appear deceptively simple science tells us what the problems are and how to solve them and for Christians the Bible motivates us to care for creation And yet both in society in general as well as in the Christian church in particular we cannot seem to agree on what to do regarding environmental issues In The Nature of Environmental Stewardship climate scientist Johnny Wei Bing Lin argues that determining the content of environmental stewardship far from being a straightforward exercise is a difficult and complex endeavour He sets forth a general taxonomy drawing from worldviews ethical theories science epistemology sciencepolicy studies politics and economics that can help us better understand what excellent creation care consists of and how to bridge the differences people have regarding environmental issues **Understanding Human-Nature Practices for Environmental Management** E. C. H. Keskitalo,2025-04-03 Nature has often been understood in literature through a disjunction to human systems This can be seen in the nature culture binary or even more clearly in the opposition of wilderness to civilization Drawing on historical and present day examples and case studies from Northern Europe this book critically examines the ways in which the use of such dichotomies can be transcended to respond to sustainability challenges Using illustrative examples the authors demonstrate how shared histories and development of land use continue to impact multiple practices today The book explores the prerequisites for environmental management approaches that counterpose the nature culture binaries that are present in existing governance mechanisms This volume will be of great interest to students and scholars of environmental management environmental law and policy and environmental anthropology *Religion and Ecological Crisis* Md. Abu Sayem,2022-09-02 *Religion and Ecological Crisis* delves into the complex relationship between religions and ecology

presenting Christian and Islamic perspectives on ecological issues through the work of John Boswell Cobb and Seyyed Hossein Nasr It examines how faith traditions of the world see and respond to our current unprecedented climate change issues This is the first comparative study of Cobb and Nasr s eco religious understanding and explores how their prescriptions can contribute alternatively to techno scientific initiatives in environmental sustainability Taking Cobb s economism and Nasr s scientism as the key concepts for surveying the roots of the ecological crisis the book offers interdisciplinary and interreligious insights into the debates about ecological equilibrium motivational awareness in human mind and about entanglements between religion and the environment This will be an insightful resource for policy makers faith leaders and for academics working in Environmental Studies and Religious Studies

Why care for Nature? Dirk Willem Postma, 2006-10-31 Don t you see that the whole aim of Newspeak is to narrow the range of thought 1 George Orwell This book has been written in a time of environmental neglect A time in which the expansive needs of multinational corporations western consumer interests and the politically celebrated ideals of economic growth and

technological progress appear to override any consideration for preserving natural beauty as well as consideration for those unable to speak and negotiate on their own behalf third world citizens future generations animals plants and landscapes This neglect is evident in the withdrawal of national governments from the requirements of international agreements on the reduction of greenhouse gas emissions Kyoto treaty it is manifest in the organised inability and unwillingness to establish more equal trade relations between rich and poor countries as well as in the lack of political commitment to protect extraordinary sites of natural beauty from economic exploitation Alaska the Amazon rainforests the Dutch Wadden Sea In times like these environmental education is a hazardous and primarily ambiguous enterprise since it easily comes to function as a means to foist present responsibilities onto future generations Some proponents for instance argue that environmental education should create a new generation of citizens who are greener than their parents Bell 2004 p 43 Thus new born citizens are burdened with environmental responsibilities that we failed to live up to ourselves *Routledge Handbook of Global Environmental Politics* Paul G. Harris, 2013-10-15 This handbook provides a comprehensive and authoritative survey of Global Environmental Politics It brings together leading international academic experts and features 40 chapters that Describe the history of global environmental politics as a discipline and explain the various theories and perspectives used by scholars and students to understand it Examine the key actors and institutions in global environmental politics explaining the role of states international organizations regimes international law foreign policy institutions domestic politics corporations and transnational actors Address the ideas and themes shaping the practice and study of global environmental politics including sustainability consumption expertise uncertainty security diplomacy North South relations globalisation justice ethics participation and citizenship Assess the key issues and policies within global environmental politics including energy climate change ozone depletion air pollution acid rain sustainable transport persistent organic pollutants hazardous wastes water rivers wetlands oceans fisheries marine mammals biodiversity migratory species natural heritage forests desertification food and agriculture With an in depth new preface by the Editor this edition of the handbook is an invaluable resource for students scholars researchers and practitioners of environmental politics environmental studies environmental science geography international relations and political science Environment and Development - Volume II Teng Teng, Ding Yifan, 2009-05-20 Environment and Development is a component of Encyclopedia of Development and Economic Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The pressing need to combine protecting the environment with sustaining development has become increasingly recognized This theme deals with environmental and ecological sustainable development Environmental damage has not only created obstacles to sustainable economic development but is also posing great threats to human health and life to ecological systems and the natural world and to the socio cultural environments in which human beings lead their daily lives The content of the theme on Environment and Development is organized with state of the art presentations covering the
