Environmental Ethics, Ecological Theology, and Natural Selection Lisa Sideris, 2003-07-16 In the last few decades religious and secular thinkers have tackled the world's escalating environmental crisis by attempting to develop an ecological ethic that is both scientifically accurate and free of human centered preconceptions This groundbreaking study shows that many of these environmental ethicists continue to model their positions on romantic pre Darwinian concepts that disregard the predatory and cruelly competitive realities of the natural world Examining the work of such influential thinkers as James Gustafson Sallie McFague Rosemary Radford Ruether John Cobb Peter Singer and Holmes Rolston Sideris proposes a more realistic ethic that combines evolutionary theory with theological insight advocates a minimally interventionist stance toward nature and values the processes over the products of the natural world

A Case Study in Thomistic Environmental Ethics Robert L. Grant, 2007 This original study applies the philosophical theological thought of Thomas Aquinas to issues of environmental ethics specifically in relation to the restoration and preservation of the plains of the Loess Hills in Iowa This study should appeal to scholars working in environmental ethics philosophy theology and ecology Thomas Aquinas Summa Theologiae to a particular environmental region namely the Loess Hills of Iowa The book begins by telling the ecological story of the Loess Hills and then proceeds to summarize the development of environmental ethics through the legacy of Henry David Thoreau thereby revealing certain

tensions that exist in contemporary environmental debates Then after considering the strengths and weaknesses of anthropocentric and ecocentric ethical systems the author provides an exposition of Aquinas understanding of the bonum naturalis the bonum connaturalis and the bonum supernaturalis as these are found in the Summa Theologiae flourishing only in ways that simultaneously save the contextualizing ecosystems This ethic is then applied to the particular case of the Loess Hills producing an eudaimonistic ecoregionalism Environment Jules Pretty,2006-06-23 This four volume set explores the locations where the environment matters most such as where people are poor where environments are under threat such as on frontiers where there are few natural resources remaining and where industrialization is rampant It will also explore these concerns at different system levels from local community to regional national and global It will also explore costs of damage to the very resources on which economies rely and the values of environmental goods and services and the controversies surrounding such valuations It is organized around environment people interactions livelihoods poverty income economic growth environment environment interactions do people matter and people people interactions collective action challenges institutions **Creation Unveiled** Daniel Salomon,2003-08 Environmental Ethics Marion Hourdequin,2024-01-25 What is environmental virtue Is developing good habits enough What does climate justice require Is ecological restoration just another form of the human domination of nature Exploring these questions and more this book provides an up to date and balanced introduction to environmental ethics It first examines ethical theory then ties theory to practice showing how values guide environmental policies but also how policies and institutions shape environmental values Updated and expanded to engage with the latest scholarship scientific findings and societal challenges this 2nd edition features New sections on food ethics multispecies justice intergenerational ethics and the Anthropocene Contemporary case studies focusing on the rights of nature the use of biotechnology in ecological restoration and just climate transitions Expanded coverage of diverse philosophical traditions including Confucian Daoist and Indigenous ethical perspectives Updated discussion questions further reading sections and online resources Exploring the possibilities and limitations inherent in both classical ethical models and modern theoretical approaches to the environment this is a key resource for teaching students to think ethically about the world we live in *Environmental Ethics and Forestry* Peter C. Environment and Economy Molly Scott Cato,2020-09-07 Nothing is more important to our world than finding a more comfortable relationship between the economy and the environment While issues such as species loss nitrate pollution water scarcity and climate change are now attracting the political attention they deserve their origin in the way our economy is organized is less frequently recognized This book makes that connection both theoretically with references to a number of heterodox approaches to economics and practically through a number of specific issues Environment and Economy begins by introducing readers to the pioneers of this field such as Fritz Schumacher and Paul Ehrlich who first drew attention to the disastrous consequences for our environment of our ever expanding economy Part II outlines the contributions to the field of Neoclassical Economics Environmental Economics Ecological Economics Green Economics and Anti Capitalist Economics Part III takes a pluralist approach to using economic tools to solve a range of environmental problems economic growth resource depletion pollution globalization climate change and markets vs commons Written in an accessible style this introductory text offers students an engaging account of the ways that the various traditions of economic thought have approached the environment bringing them together for the first time in one volume The text is complemented by boxes case studies and recommended reading for each theme addressed It will be of value to students interested in environmental sciences geography green issues and economics **International Handbook of Research on Environmental Education**

Stevenson,Robert Stevenson,2013 The environment and contested notions of sustainability are increasingly topics of public interest political debate and legislation across the world Environmental education journals now publish research from a wide variety of methodological traditions that show linkages between the environment health development and education The growth in scholarship makes this an opportune time to review and synthesize the knowledge base of the environmental education EE field The purpose of this 51 chapter handbook is not only to illuminate the most important concepts findings and theories that have been developed by EE research but also to critically examine the historical progression of the field its current debates and controversies what is still missing from the EE research agenda and where that agenda might be headed Published for the American Educational Research Association AERA

Recognizing the Autonomy of Nature Thomas Heyd,2005-11-09 How do the ways in which we think about and describe nature shape the use and protection of the environment Do our seemingly well intentioned efforts in environmental conservation reflect a respect

for nature or our desire to control nature's wildness. The contributors to this collection address these and other questions as they explore the theoretical and practical implications of a crucial aspect of environmental philosophy and policy: the autonomy of nature. In focusing on the recognition and meaning of nature's autonomy and linking issues of metaphysics, epistemology, ethics, and policy, the essays provide a variety of new perspectives on human relationships to nature. The authors begin by exploring what is meant by nature in what sense it can be seen as autonomous and what respect for the autonomy of nature might entail. They examine the conflicts that arise between the satisfaction of human needs (food, shelter, etc.) and the natural world. The contributors also consider whether the activities of human beings contribute to nature's autonomy. In their investigation of these issues, they not only draw on philosophy and ethics; they also discuss how the idea of nature's autonomy affects policy decisions regarding the protection of agricultural, rural, and beach areas. The essays in the book's final section turn to management and restoration practices. The essays in this section pay close attention to how efforts at environmental protection alter or reinforce the traditional relationship between humans and nature. More specifically, the contributors examine whether management practices as they are applied in nature conservation actually promote the autonomy of nature or whether they turn the environment into a client for policymakers.

Earthkeeping and Character Steven Bouma-Prediger, 2019-11-19. Addressing a topic of growing and vital concern, this book asks us to reconsider how we think about the natural world and our place in it. Steven Bouma-Prediger brings ecotheology into conversation with the emerging field of environmental virtue ethics, exploring the character traits and virtues required for Christians to be responsible keepers of the earth and to flourish in the challenging decades to come. He shows how virtue ethics can enrich Christian environmentalism, helping readers think and act in ways that rightly value creation.

Every Living Thing Jenell Johnson, 2023-01-03. This book examines the question of what we mean when we talk about life, revealing new insights into what life is, what it does, and why it matters. Jenell Johnson studies arguments on behalf of life, not just of the human or animal variety, but all life. She considers, for example, the Standing Rock Sioux tribe's fight for water, deep ecologists, Earth First! activism, the Voluntary Human Extinction Movement, and astrophysicists' positions on Martian microbes. What she reveals is that this advocacy, vital advocacy, expands our view of what counts as life and shows us what it would mean for the moral standing of human life to be extended to life itself. Including short interviews with celebrated ecological writer Dorion Sagan, former NASA Planetary Protection Officer Catharine Conley, and leading figure in Indigenous and environmental studies Kyle Whyte, *Every Living Thing* provides a capacious view of life in the natural world. This book is a must read for anyone interested in biodiversity, bioethics, and the environment.
