Environmental History Of The Central Electricity Generating Board:

Power in Trust John Sheail,1991 This study examines the history of environmental issues that accompanied the growth of electrification throughout Great Britain since the 1920s The focus is on the impact of power stations and the main transmission lines of England and Wales since the nationalization of the industry in 1947 This development has been the target of a great deal of criticism from aesthetic complaints to concerns about pollution and radiation Drawing on the archives of the industry and those of Government Departments the author provides firsthand evidence of how the issues were regarded at the time and of the way in which industry officials dealt with them This detailed account will be of interest to all who are concerned with the power industry and environmental issues *The Basic Environmental History* Mauro Agnoletti,Simone Neri Serneri,2014-10-15 This book is an introductory instrument to the main themes of environmental history illustrating its development over time methodological implications results achieved and those still under discussion But the overriding aspiration is to show that the doubts methods and knowledge elaborated by environmental history have a heuristic value that is far from negligible precisely in its attitude to the most consolidated major historiography For this reason this book gives an overview of environmental history as it is an essential component of the basic knowledge of global history At the same time it introduces specific aspects which are useful both for anyone wanting to deepen his her studies of environmental historiography and for those interested in one of the many disciplinary areas from rural history to urban history from the history of technology to the history of public health etc with which environmental history develops a dialogue *An Environmental History of Twentieth-Century Britain* John Sheail,2017-03-14 Environmental history the history of the relationship between people and the natural world is a dynamic and increasingly important field In *An Environmental History of Twentieth Century Britain* John Sheail breaks new ground in illustrating how some of the most pressing concerns came to be recognised and a response made Much use is made of archival sources in tracing a number of key issues including Management of change by central and local government The manner in which natural processes were incorporated in projects to protect personal and public health and ultimately environmental health New beginnings in forestry The emergence of a third force alongside farming and forestry in the countryside Management of a transport revolution and mitigation of environmental hazards Such instances of policy making are reviewed within the wider context of a growing awareness both on the part of government and business of the role of environmental issues in the creation of wealth and social well being for us all *An Environmental History of Twentieth Century Britain* is essential reading for all those concerned with these issues *An Environmental History of Britain since the Industrial Revolution* B.W. Clapp,2014-07-15 The present and future state of the environment gives rise to ever increasing concern but much less is known as yet about the past the damage that has been done since and by the Industrial Revolution how far our predecessors were aware of it the steps they took and the gradual development of a wider concern for the state of the world and our

Transforming the Countryside Paul Brassley,Jeremy Burchardt,Karen Sayer,2016-11-25 It is now almost impossible to conceive of life in western Europe either in the towns or the countryside without a reliable mains electricity supply By 1938 two thirds of rural dwellings had been connected to a centrally generated supply but the majority of farms in Britain were not linked to the mains until sometime between 1950 and 1970 Given the significance of electricity for modern life the difficulties of supplying it to isolated communities and the parallels with current discussions over the provision of high speed broadband connections it is surprising that until now there has been little academic discussion of this vast and protracted undertaking This book fills that gap It is divided into three parts The first on the progress of electrification explores the timing and extent of electrification in rural England Wales and Scotland the second examines the effects of electrification on rural life and the rural landscape and the third makes comparisons over space and time looking at electrification in Canada and Sweden and comparing electrification with the current problems of rural broadband *Carbon Capture and Storage in the United Kingdom* Marc Hudson,2024-03-27 This book is a concise but comprehensive guide to the history present and possible futures of carbon capture and storage policy and action in the United Kingdom UK There have been multiple failed starts promises and last chances for carbon capture and storage CCS in Europe North America China and Australia but thus far it

has repeatedly collided with the political and economic realities that the technology is too expensive and complicated to gain and keep policymakers support However in the UK that might be changing with explicit government support for CCS to help decarbonise industry Set within the broader context of global interest in CCS this book first outlines the technologies involved in the types of capture technology transport options and storage options in the UK It then briefly introduces an overarching policy analysis framework John Kingdon s multiple streams approach and uses it to give an account of the long history of CCS interest and efforts in three chapters covering the 1970s to 2002 2003 to 2015 and 2016 to the present day Marc Hudson focusses on the various arguments made for the introduction of CCS and the slowly shifting coalitions of actors who make those arguments while contrasting these with the perspectives of those opposed to CCS This book will be of great interest to students scholars and policymakers researching and working in the field as well as the related areas of energy policy energy transitions and climate change

Key Concepts in Energy Nuno Luis Madureira,2014-07-08 Organized around eight fundamental ideas Key concepts in energy history explores the discoveries technologies and new paradigms in the field of energy and how they have changed the course of history Complex technical concepts such as the rebound effect technological hybridization marginal cost pricing are explained in clear terms and a balanced and concise account of t energy sources in the XIX and XX century such as wood coal oil hydroelectricity and nuclear energy is provided Key concepts in energy considers the process of energy substitutions and analyzes it as a process of complementary usages hybridization and technological mixes The ex post view tends to focus on replacement from among alternative energy technologies and is basically innovation centric This means that little attention has been given to factors such as the windows of opportunities created by governments inventors and entrepreneurs This book highlights how key energy concepts surfaced tracing their evolution throughout history It encompasses four economic concepts rebound effect energy intensity marginal cost pricing and levelized cost accounting and four technological engineering concepts primary final energy technological hybridization last gasp and probable oil reserves The main benefit from reading the book is a cross disciplinary overview of energy fundamentals in a short and focused reading

Environmental Dilemmas R.J. Berry,2007-08-19 This is a book by people who have had to make decisions which affect the environment in which we all live decisions which sometimes affect the quality of life of millions It is not an academic disquisition on how to approach decision making Most of the chapters are written by scientists who have had to take action or make recommendations on environmental matters in situations where the data are incomplete or choices hedged by factors beyond scientific resolution the result is that they have had to resolve dilemmas about the proper way forward in the matter My brief to the authors was to describe issues with which they had been personally concerned rather than simply select from the vast range of environmental problems out there The only exception to this was Andrew Brennan Chapter 1 who is a professional philosopher I asked him to say something about the processes and errors indulged by environmental decision makers There is some overlap between chapters but this is not

extensive I have made no attempt to eliminate it because the aim has been to present personal points of view not a systematic account of environmental problems Similarly there are important topics which are not covered Indeed a critic would complain that a book on environmental dilemmas which does not deal directly with the crucial divide between development and conservation is almost wholly irrelevant from one point of view it could be condemned as fiddling while Rome burns

New Lives, New Landscapes Revisited Linda M. Ross, Katrina Navickas, Ben Anderson, Matthew Kelly, 2023-06-08 How did rural Britain become modern during the twentieth century New Lives New Landscapes examines how the development of modern infrastructure in Britain transformed both its landscapes and the lives of those who lived within them Shifting the focus away from the city the narrative challenges us to rethink what we mean by modern Britain

Rural Change and Planning Gordon Cherry, Alan Rogers, 2018-12-07 Originally published in 1996 Rural Change and Planning describes the turbulent changes that have occurred in rural England and Wales since the outbreak of the First World War The book describes the changes from an agriculturally dominated countryside to one which has had to increasingly adapt to urban pressures Looking at the changes chronologically the book provides an integrated history of rural planning in the twentieth century and the developments which have taken place within the State which has facilitated those changes The book looks at the social and economic impacts of two world wars on agricultural communities and the pressures of industry new settlements and the effects of recreation on rural landscapes Environmental Sociology John A.

Hannigan, 1995 John Hannigan argues that society's unwillingness to recognise and solve environmental problems rests primarily upon the claims making activities of a number of issue entrepreneurs in science mass media and politics

Sors, 2013-10-02 Science Technology and European Cultural Heritage is a collection of papers from the Proceedings of the European Symposium of the same title held in Bologna Italy on June 13 16 1989 The papers discuss the critical issues related to the scientific and technical aspects of the protection and conservation of the cultural heritage of Europe Participants of the symposium identify and describe the main research and development issues that are common to cultural heritage problems and increase cooperation in these areas Other papers examine the applicability of research and development through better matching with the real needs of conservators restorers policy makers and the general public The participants also discuss specific research and development directions for the future including the provision of a scientific basis for European Community policies on environment and culture One paper presents some of the scientific research done both in the field and laboratory of specific historical areas monuments indoor objects As an example archaeologists can use infrared thermal image analysis as an enhanced tool to detect buried archeological and historical sites Another paper analyzes the chemical and physical properties of deteriorated stones in historical monuments in Castile Leon The collection can prove useful for archaeologists historians museum curators and policy makers involved in national and cultural

preservation **The Environmental Case for Brexit** Ben Pontin, 2019-05-30 The recent Brexit debates present leaving the European Union largely as a threat to environmental protection and to environmental law This exciting and important new work argues that Brexit represents a real opportunity for environmental protection in the United Kingdom freeing it from a pan European framework not necessarily fit for UK domestic purposes Central to the argument is the belief that environmental protection in the United Kingdom can most effectively be pursued through established domestic institutions looking inwards at local challenges and outwards at more global ones all the while drawing on considerable historical experience The book is designed to address rather than dismiss those concerns raised by environmental lawyers after the outcome of the referendum Provocative and compelling it offers an alternative vision of the UK environmental law framework outside of the European Union *Selected Water Resources Abstracts* ,1991 Proposed Edgewater 5 Coal Fired Power Plant, Sheboygan County ,1979 *The Organization of the Energy Industry* Lynn F. Pearson, 1981-06-18 Dynamics and Control in Nuclear Power Stations British Nuclear Energy Society, 1992 This volume covers a wider view of the aspects of control of nuclear power stations by taking into consideration the plant as a whole and the protection systems employed therein Authors with world wide experience consider all the aspects of dynamics and control in the context of both fast and thermal power stations The topics discussed include both the methods of development and applications within analysis of plant behaviour validation of mathematical models plant testing design and implementation of controls
