## **Environmental Justice And The New Pluralism The Challenge Of Difference For Environmentalism:**

*Environmental Justice and the New Pluralism* David Schlosberg, 1999 In the first ever theoretical treatment of the environmental justice movement David Schlosberg demonstrates the development of a new form of critical pluralism in both theory and practice Taking into account the evolution of environmentalism and pluralism over the course of the century the author argues that the environmental justice movement and new pluralist theories now represent a considerable challenge to both conventional pluralist thought and the practices of the major groups in the US environmental movement Much of recent political theory has been aimed at how to acknowledge and recognize rather than deny the diversity inherent in contemporary life In practice the myriad ways people define and experience the environment has given credence to a form of environmentalism that takes difference seriously The environmental justice movement with its base in diversity its networked structure and its communicative practices and demands exemplifies the attempt to design political practices beyond those one would expect from a standard interest group in the conventional pluralist model

**Environmental Justice and the New Pluralism** David Schlosberg, 1999 In this theoretical treatment of the environmental justice movement David Schlosberg demonstrates the development of a new form of critical pluralism His study presents a challenge to both conventional pluralist thought and the practices of the major groups in the US environmental movement

[The Routledge Handbook of Environmental Justice](#) Ryan Holifield, Jayajit Chakraborty, Gordon Walker, 2017-09-14 The Routledge Handbook of Environmental Justice presents an extensive and cutting edge introduction to the diverse rapidly growing body of research on pressing issues of environmental justice and injustice With wide ranging discussion of current debates controversies and questions in the history theory and methods of environmental justice research contributed by over 90 leading social scientists natural scientists humanists and scholars from professional disciplines from six continents it is an essential resource both for newcomers to this research and for experienced scholars and practitioners The chapters of this volume examine the roots of environmental justice activism lay out and assess key theories and approaches and consider the many different substantive issues that have been the subject of activism empirical research and policy development throughout the world The Handbook features critical reviews of quantitative qualitative and mixed methodological approaches and explicitly addresses interdisciplinarity transdisciplinarity and engaged research Instead of adopting a narrow regional focus it tackles substantive issues and presents perspectives from political and cultural systems across the world as well as addressing activism for environmental justice at the global scale Its chapters do not simply review the state of the art but also propose new conceptual frameworks and directions for research policy and practice Providing detailed but accessible overviews of the complex varied dimensions of environmental justice and injustice the Handbook is an essential guide and reference not only for researchers engaged with environmental justice but also for undergraduate and graduate teaching and for policymakers and activists

**Environmental Justice in South Africa** David A. McDonald, 2002 In 11 articles reprinted from a 1999

journal and a 1998 anthology South African social scientists and those from elsewhere who have worked there provide an overview of the environmental justice movement in the country which blossomed only after the battle against apartheid was won in the early 1990s They trace its history and describe the key theoretical and practical issues it faces after a decade what has changed and what remained the same the most and least effective strategies and future directions Annotation copyrighted by Book News Inc Portland OR

*Toxic Town* Peter C. Little, 2014-03-14 Shows the risks of high tech pollution through a study of an IBM plant's effects on a New York town In 1924 IBM built its first plant in Endicott New York Now Endicott is a contested toxic waste site With its landscape thoroughly contaminated by carcinogens Endicott is the subject of one of the nation's largest corporate state mitigation efforts Yet despite the efforts of IBM and the U S government Endicott residents remain skeptical that the mitigation systems employed were designed with their best interests at heart In *Toxic Town* Peter C Little tracks and critically diagnoses the experiences of Endicott residents as they learn to live with high tech pollution community transformation scientific expertise corporate state power and risk mitigation technologies By weaving together the insights of anthropology political ecology disaster studies and science and technology studies the book explores questions of theoretical and practical import for understanding the politics of risk and the ironies of technological disaster response in a time when IBM's stated mission is to build a Smarter Planet Little critically reflects on IBM's new corporate tagline arguing for a political ecology of corporate social and environmental responsibility and accountability that places the social and environmental politics of risk mitigation front and center Ultimately Little argues that we will need much more than hollow corporate taglines claims of corporate responsibility and attempts to mitigate high tech disasters to truly build a smarter planet

*The Politics of Actually Existing Unsustainability* John Barry, 2012-02-23 Going against both the naive techno optimism of greening business as usual and a resurgent catastrophism within green thinking and politics *The Politics of Actually Existing Unsustainability* offers an analysis of the causes of unsustainability and diminished human flourishing It makes a case for seeing that it is profound and deepening unsustainability and growing injustice that characterizes the modern world The book locates the causes of unsustainability in dominant capitalist modes of production debt based consumerism and the imperative for orthodox economic growth It suggests that valuable insights into the causes of and alternatives to unsustainability can be found in a critical embracing of human vulnerability and dependency as both constitutive and ineliminable aspects of what it means to be human Rather than seeing invulnerability as the appropriate response the book defends resilience the ability to cope with rather than solve vulnerability as a more productive strategy *The Politics of Actually Existing Unsustainability* offers a trenchant critique of the dominant neoclassical economic groupthink which the book argues must be seen not as some value neutral form of expert knowledge but as a thoroughly ideological common sense that has corrupted and limited creative ways of thinking about and through our current predicament It offers a green political economic alternative which replaces economic growth with economic security and

views economic growth as having done its work in the minority affluent world which should now focus on human flourishing and lowering socio economic inequality and fostering solidarity as part of that new re orientation of public policy Complementing this green political economy the book outlines and develops an account of green republicanism which represents an innovative and original contribution to debates on the political responses to the crises and opportunities of global unsustainability The Politics of Actually Existing Unsustainability draws widely from a range of disciplines and thinkers to produce a highly relevant timely and provocatively original statement on the human predicament in the twenty first century *Just Sustainabilities* Julian Agyeman, Robert Bullard, Bob Evans, 2012-04-27 Environmental activists and academics alike are realizing that a sustainable society must be a just one Environmental degradation is almost always linked to questions of human equality and quality of life Throughout the world those segments of the population that have the least political power and are the most marginalized are selectively victimized by environmental crises This book argues that social and environmental justice within and between nations should be an integral part of the policies and agreements that promote sustainable development The book addresses the links between environmental quality and human equality and between sustainability and environmental justice Subjects of Intergenerational Justice Christine J. Winter, 2021-09-05 This book challenges mainstream Western IEJ intergenerational environmental justice in a manner that privileges indigenous philosophies and highlights the value these philosophies have for solving global environmental problems Divided into three parts the book begins by examining the framing of Western liberal environmental intergenerational and indigenous justice theory and reviews decolonial theory Using contemporary case studies drawn from the courts film biography and protests actions the second part explores contemporary M ori and Aboriginal experiences of values conflict in encounters with politics and law It demonstrates the deep ontological rifts between the philosophies that inform M ori and Aboriginal intergenerational justice IJ and those of the West that underpin the politics and law of these two settler states Existing Western IEJ theories across distributional communitarian human rights based and the capabilities approach to IJ are tested against obligations and duties of specific M ori and Aboriginal iwi and clans Finally in the third part it explores the ways we relate to time and across generations to create regenerative IJ Challenging the previous understanding of the conceptualization of time it posits that it is in how we relate human to human human to nonhuman nonhuman to human that robust conceptualization of IEJ emerges This volume presents an imagining of IEJ which accounts for indigenous norms on indigenous terms and explores how this might be applied in national and international responses to climate change and environmental degradation Demonstrating how assumptions in mainstream justice theory continue to colonise indigenous people and render indigenous knowledge invisible this book will be of great interest to students and scholars of environmental and intergenerational philosophy political theory indigenous studies and decolonial studies and environmental humanities more broadly Environmental Citizenship Andrew Dobson, Derek Bell, 2006 A multidisciplinary consideration of

how effective environmental citizenship can be in achieving sustainability with theoretical practical and ethnographic perspectives

**Encyclopedia of Global Justice** Deen K. Chatterjee, 2012-01-23 This two volume Encyclopedia of Global Justice published by Springer along with Springer's book series Studies in Global Justice is a major publication venture toward a comprehensive coverage of this timely topic The Encyclopedia is an international interdisciplinary and collaborative project spanning all the relevant areas of scholarship related to issues of global justice and edited and advised by leading scholars from around the world The wide ranging entries present the latest ideas on this complex subject by authors who are at the cutting edge of inquiry The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come The entries number around 500 and consist of essays of 300 to 5000 words The inclusion and length of entries are based on their significance to the topic of global justice regardless of their importance in other areas

**The Commons in a Global World** Tobias Haller, Thomas Breu, Tine De Moor, Christian Rohr, Heinzpeter Znoj, 2019-04-30 This volume focuses on how in Europe the debate on the commons is discussed in regard to historical and contemporary dimensions critically referencing the work of Elinor Ostrom It also explores from the perspective of new institutional political ecology NIPE how Europe directly and indirectly affected and affects the commons globally Most of the research on the management of commons pool resources is limited to dealing with one of two topics either the interaction between local participatory governance and development of institutions for commons management or a political economy approach that focuses on global change as it is related to the increasingly globalised expansion of capitalist modes of production consumption and societal reproduction This volume bridges the two addressing how global players affect the commons worldwide and how they relate to responses emerging from within the commons in a global local glocal world Authors from a range of academic disciplines present research findings on recent developments on the commons including historical insights new innovations for participatory institutions building in Europe or several types of commons grabbing especially in Africa related to European investments and restrictions on the management of commons at the international level European case studies are included providing interesting examples of local participation in commons resource management while simultaneously showing Europe as a centre for globalized capitalism and its norms and values affecting the rest of the world particularly developing countries This book will be of interest to students and researchers from a wide range of disciplines including natural resource management environmental governance political geography and environmental history

Postpolitics and the Limits of Nature Andy Scerri, 2019-01-01 Explores why past generations of radical ecological and social justice scholarship have been ineffective and considers the work of a new wave of scholarship that aims to reinvent the radical project and combat injustice In Postpolitics and the Limits of Nature Andy Scerri offers a comprehensive overview of the critical theory project from the 1960s to the present refracted through the lens of US politics and the American Left He examines why past generations of radical ecological and social justice scholarship have been ineffective in the fight against

injustice and rampant environmental exploitation Scerri then engages a new wave of radicals and reformists who in the wake of the Occupy movement and the 2016 presidential election are reinventing the radical project as a challenge to injustice in the Anthropocene era Along the way he provides a fresh account of the thought of one of the major contributors to critical theory Theodor Adorno and of recent work that seeks to link Adorno's ideas to the so called new realism in political philosophy and political theory This book is something like an *histoire v nementielle* of contending philosophies of nature and the natural in relation to economy and politics over the past 60 odd years What is impressive is the way Scerri situates the many different activists scholars and views in the transition from Keynesian regulatory society to naturalized neoliberalism Thus authors are treated not as timeless purveyors of theory but rather as political economists rooted in the trends and currents of their particular time I believe this will be an important book Ronnie D Lipschutz coauthor of *Environmental Politics for a Changing World Power Perspectives and Practice Second Edition* *Routledge Handbook of the History of Sustainability* Jeremy L. Caradonna, 2017-10-18 The Routledge Handbook of the History of Sustainability is a far reaching survey of the deep and contemporary history of sustainability This innovative resource will help to define the history of sustainability as an identifiable field It provides a unique resource for advanced undergraduates graduate students and scholars and delivers essential context for understanding the current state and future path of the sustainability movement The history of sustainability is an increasingly important domain within the discipline of history which draws on an interdisciplinary set of fields ranging from energy studies transportation and urbanism to environmental history economics and philosophy Key sections in this handbook cover the historiography of sustainability resilience and collapse in historical societies the deep roots of sustainability seventeenth century to nineteenth century the recent history of sustainability twentieth century to present and core issues and key debates in sustainability This handbook is an invaluable research and teaching tool for those interested in the history and development of sustainability and an essential resource for the many sustainability studies programs that now exist in the world's universities

**Anthropocene Encounters: New Directions in Green Political Thinking** Frank Biermann, Eva Löwbrand, 2019-02-07 Coined barely two decades ago the Anthropocene has become one of the most influential and controversial terms in environmental policy Yet it remains an ambivalent and contested formulation giving rise to a multitude of unexpected and often uncomfortable conversations This book traces in detail a broad variety of such Anthropocene encounters in science philosophy and literary fiction It asks what it means to think green in a time when nature no longer offers a stable backdrop to political analysis Do familiar political categories and concepts such as democracy justice power and time hold when confronted with a world radically transformed by humans The book responds by inviting more radical political thought plural forms of engagement and extended ethical commitments making it a fascinating and timely volume for graduate students and researchers working in earth system governance environmental politics and studies of the Anthropocene This is one of a series of publications associated with the Earth

**Introducing Just Sustainabilities** Julian Agyeman, 2013-05-09 This unique and insightful text offers an exploration of the origins and subsequent development of the concept of just sustainability Introducing Just Sustainabilities discusses key topics such as food justice sovereignty and urban agriculture community space place making and spatial justice the democratization of our streets and public spaces how to create culturally inclusive spaces intercultural cities and social inclusion green collar jobs and the just transition and alternative economic models such as co production With a specific focus on solutions oriented policy and planning initiatives that specifically address issues of equity and justice within the context of developing sustainable communities this is the essential introduction to just sustainabilities *Citizens, Experts, and the Environment*

Frank Fischer, 2000-12-19 Claims that the problematic communication gap between experts and ordinary citizens is best remedied by a renewal of local citizen participation in deliberative structures [Benefit-sharing in Environmental Governance](#)

Louisa Parks, 2019-11-20 Taking a bottom up perspective this book explores local framings of a wide range of issues related to benefit sharing a growing concept in global environmental governance Benefit sharing in Environmental Governance draws on original case studies from South Africa Namibia Greece Argentina and Malaysia to shed light on what benefit sharing looks like from the local viewpoint These local level case studies move away from the idea of benefit sharing as defined by a single international organization or treaty Rather they reflect different situations where benefit sharing has been considered including agriculture access to land and plants wildlife management and extractives industries Common themes in the experiences of local communities form the basis for an exploration of spaces for local voices at the international level in the Convention on Biological Diversity CBD often argued to be the most open arena to non state actors and therefore vital to how local voices may be included at the global level The book analyzes the decisions of the CBD parties to produce an in depth reflection on how this arena builds and delimits spaces for the expression of local community themes and paths for local community participation including community protocols The book then situates the bottom up findings in the wider debate about global civil society and deliberative democracy in environmental governance This interdisciplinary book will be of great interest to students and scholars of environmental politics environmental law political ecology and global governance as well as practitioners and policymakers involved in multilateral environmental agreements *Elgar Encyclopedia of Environmental Sociology*

Christine Overdevest, 2024-04-12 The Elgar Encyclopedia of Environmental Sociology serves as a repository of insight on the complex interactions challenges and potential solutions that characterize our shared ecological reality Presenting innovative thinking on a comprehensive range of topics expert scholars researchers and practitioners illuminate the nuances complexities and diverse perspectives that define the continually evolving field of environmental sociology [Mining, the Environment, and Indigenous Development Conflicts](#)

Saleem H. Ali, 2021-10-19 From sun baked Black Mesa to the icy coast of Labrador native lands for decades have endured mining ventures that have only

lately been subject to environmental laws and a recognition of treaty rights Yet conflicts surrounding mining development and indigenous peoples continue to challenge policy makers This book gets to the heart of resource conflicts and environmental impact assessment by asking why indigenous communities support environmental causes in some cases of mining development but not in others Saleem Ali examines environmental conflicts between mining companies and indigenous communities and with rare objectivity offers a comparative study of the factors leading to those conflicts Mining the Environment and Indigenous Development Conflicts presents four cases from the United States and Canada the Navajos and Hopis with Peabody Coal in Arizona the Chippewas with the Crandon Mine proposal in Wisconsin the Chipewyan Inuits D n and Cree with Cameco in Saskatchewan and the Innu and Inuits with Inco in Labrador These cases exemplify different historical relationships with government and industry and provide an instance of high and low levels of Native resistance in each country Through these cases Ali analyzes why and under what circumstances tribes agree to negotiated mining agreements on their lands and why some negotiations are successful and others not Ali challenges conventional theories of conflict based on economic or environmental cost benefit analysis which do not fully capture the dynamics of resistance He proposes that the underlying issue has less to do with environmental concerns than with sovereignty which often complicates relationships between tribes and environmental organizations Activist groups he observes fail to understand such tribal concerns and often have problems working with tribes on issues where they may presume a common environmental interest This book goes beyond popular perceptions of environmentalism to provide a detailed picture of how and when the concerns of industry society and tribal governments may converge and when they conflict As demands for domestic energy exploration increase it offers clear guidance for such endeavors when native lands are involved

*The Oxford Handbook of Political Theory* John S Dryzek, Bonnie Honig, Anne Phillips, 2008-06-12 Oxford Handbooks of Political Science are the essential guide to the state of political science today With engaging contributions from 51 major international scholars the Oxford Handbook of Political Theory provides the key point of reference for anyone working in political theory and beyond
