Frank R. Spellman, Melissa L. Stoudt, 2013-02-21. Environmental issues, global warming, pollution, and chemical dumping are ever present in the news. But what about the health problems these issues pose? Frank Spellman and Melissa Stoudt identify the hazardous environmental issues and explain the science behind the dangers to our health. Then each chapter tackles a different issue, outlining its scientific concepts and relating it to our health with case studies or scenarios to bring the concepts to life. Lastly, the chapters conclude with thought-provoking questions. The authors also provide solutions to control the factors that harm our health, making this handbook a valuable resource for any student library or one interested in the dangers of environmental health.

Environmental Science and Technology Stanley E.

Manahan, 1997-08-26. This broad overview covers the four traditional spheres of the environment: water, air, earth, and life, and introduces a fifth sphere, the anthrosphere, which the author defines as the sphere of human activities, especially technology, that affect the earth. Environmental Science and Technology is organized into six major areas: one for each of the five spheres and one introductory section that explains the fundamentals of chemistry, biology, biochemistry, and environmental chemistry. Throughout the book, the relationships among the five spheres and their connections to the sciences are emphasized. For better or worse, technology is closely intertwined with the other four spheres. Humans utilize resources, manufacture goods, practice agriculture, and engage in other activities that have profound effects on the planet. This unique text/reference takes a realistic look at the environmental effects of human activities and shows how constructively directed technology can have a beneficial effect on the Earth.
