Environmental Decisionmaking In A Transboundary Region:

Environmental Decisionmaking in a Transboundary Region Alison Rieser, Judith Spiller, David VanderZwaag, 2013-11-11 Comparative Risk Assessment and Environmental Decision Making Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges *Ecological Studies in the Middle Reach of Chesapeake Bay* Kenneth L. Jr. Heck, 2013-06-29 The decision to build a nuclear power plant at Calvert Cliffs on the western shore of the Chesapeake Bay in southern Maryland resulted in a landmark legal decision Calvert Cliffs Coordinating Committee vs Atomic Energy Commission and began one of the most intensive long term studies ever carried out in an American estuarine system In the pages that follow we describe the major results and findings from studies conducted over more than a decade by scientists from The Academy of Natural Sciences of Philadelphia ANSP These studies were designed to assess the potential effects that operation of the Calvert Cliffs Nuclear Power Plant CCNPP might have on the mid portion of Chesapeake Bay The approach taken was to study major biotic components of the system over an area and a time period sufficient to allow comparison of conditions between preoperational and operational periods within a sampling locality and comparisons of conditions at reference sites with those at impact sites after plant operations began Elements chosen for detailed study included species composition and production rates of major primary producers water chemistry zooplankton benthos and finfish abundance and species composition the abundance and growth rates of commercially important shellfish clams oysters and blue crabs and the colonization sequences of invertebrates on artificial substrates *Nuclear Safety and Local/regional Democracy* Council of Europe, Standing Conference of Local and Regional Authorities of Europe, 1998-01-01

Canadian Oceans Policy Don M. McRae, Gordon Munro, 2011-11-01 This book deals with Canada's oceans management policies since the conclusion of the 1982 Convention of the Law of the Sea That Convention set out a jurisdictional framework for the management of the world's oceans but it did not provide states with precise guidance on all the issues that can arise As a state with one of the world's longest coastlines Canada was one of the principal beneficiaries under the 1982 Convention regime A study of Canadian policy is particularly significant as Canadian oceans management places in relief many of the

difficult questions yet to be resolved The central theme of this book whose multidisciplinary contributors include leading Canadian participants in the Third United Nations Conference on the Law of the Sea as well as leading Canadian academic and government oceans specialists concerns the adequacy of the Canadian management responses to a new oceans regime which grants substantial jurisdiction to the coastal state The chapters look at dispute settlement maritime boundaries and examine future Canadian and international policy directions They are both analytical and prophetic providing an assessment of the past and presenting a glimpse of the future Canadian Oceans Policy provides insights into how Canada is managing the oceans and ocean resources off its coast and looks at the problems that lie ahead The book also makes a major contribution to our understanding of an increasingly vital area of global politics It will be of interest both to academics and policymakers and to all those concerned with the future of the oceans

Transboundary Policy Challenges in the Pacific Border

Regions of North America Donald K. Alper, John Chadwick Day, James Loucky, 2008 Transboundary Policy Challenges responds to a growing interest in borderlands environmental policy by highlighting significant transboundary research and practices being undertaken within and across the Pacific border regions of North America Growing concern about the seriousness of environmental problems particularly in high growth border areas coupled with the rising awareness of the complexities entailed in wise development decisions has spurred recognition that new realities require new responses Critical for effective environmental protection restoration and education is a sharing of understanding and effort across borders Transboundary Policy Challenges advances transborder environmental research and discusses sensible policy directions with particular focus on critical areas of international concern and engagement land and water use planning regional growth management trade and transportation corridors environmental education and travel and tourism Contributors to the volume represent a range of disciplines as well as institutions in Canada the United States and Mexico

Network Analysis in Marine Ecology F. Wulff, J.G. Field, K.H. Mann, 2012-12-06 This book arises from a workshop on the application of network analysis to ecological flow networks The purpose is to develop a new tool for comparison of ecosystems paying particular attention to marine ecosystems After a review of the methods and theory data from a variety of marine habitats are analyzed and compared Readers are shown how to calculate such properties as cycling index average path length flow diversity indices of ecosystem growth and development and the origins and fates of particular flows This is a highly original contribution to the growing field of ecosystem theory in which attention is paid to the properties of the total functioning ecosystem rather than to the properties of individual organisms New insights are provided into the workings of marine systems

Immunochemical Approaches to Coastal, Estuarine and Oceanographic Questions Clarice M.

Yentsch, Frances C. Mague, Paul K. Horan, 2013-03-13 This volume represents a collection of pioneering papers introducing immunochemical techniques to the aquatic sciences It is the product of a workshop entitled Immunochemical Approaches to Coastal Estuarine and Oceanographic Questions held at the University of Southern Maine Portland Oct 5 7 1986 Funding

from many sources made this workshop possible and is gratefully acknowledged The reader will note great variability in both the quality and scope of the papers which we have divided into four sections I Background material on the immune system borrowed from a recent NIH publication II Background material related to aquatic sciences III Techniques IV Applications Readers familiar with terminology are directed to start with the original contributions related to aquatic sciences page 21 Some of the contributions are abstracts only Others are preliminary for which we are grateful to the authors for their willingness to share recent sometimes tentative findings with a broader community Some offer novel and tempting insights but as they exist lack adequate standards and controls Others are thorough and represent major scientific contributions The promise rests in generating and working with reagents of great specificity enabling orders of magnitude improvements in the sensitivity of our measurements Authors also address the problems and limitations We thank the numerous authors and reviewers In support of every successful endeavor is someone of unusual savvy For us this has been David A Phinney His leadership wisdom and wit have been important to the introduction of flow cytometry sorting and immunochemistry into aquatic research

International Regulation of Underwater Sound Elena McCarthy, 2007-05-08 Numerous incidents suggest that man made sound injures and can kill marine mammals This book offers an objective look at how ocean noise should be addressed given the lack of regulatory structure and the scientific uncertainty over the effects of noise on marine life It is an essential text for policymakers governments and NGOs biologists environmental activists oceanographers and those in the shipping engineering and offshore oil and gas industries

Environmental Security in South-Eastern Europe Massimiliano Montini, Slavko Bogdanovic, 2011-01-07 Authored by international experts from academia international organizations governments and NGOs this book highlights the main environmental security issues in the South East European SEE countries with a particular focus on climate change and water management The common goal of the authors was to provide a reliable evaluation of whether existing legal regimes and correct implementation of applicable international treaties may contribute to reducing environmental security risks in the region In depth analyses and assessment of major challenges in compliance serve as a firm ground which such evaluation is based on This volume is recommended for public officials legal practitioners and consultants Its interest may also extend beyond the SEE countries serving as a case study of a broader and paradigmatic relevance of the analysis and management of environmental and security issues in a trans boundary context

Navigational Rights and Freedoms and the New Law of the Sea Donald R. Rothwell, Sam Bateman, 2021-10-18 Navigational rights and freedoms have been central to the development of the law of the sea since the original debates over whether the seas were open or closed to maritime traffic The 1982 UN Convention on the Law of the Sea recognises the legitimate rights of coastal states to proclaim sovereignty and assert jurisdiction over vast areas of maritime space In return maritime states are given a range of navigational rights over waters ranging from the territorial sea through to the high sea The new regime of the law of the sea created by the Convention presents an opportunity to review

developments in the law of navigational rights and freedoms This book assesses the navigational regime established by the 1982 Convention with emphasis given to the continuing importance of the freedom of the seas Navigation in the territorial sea and international straits is reviewed especially in the Straits of Malacca and Singapore and the Torres Strait Archipelagic navigation from the perspective of two claimant states Indonesia and the Philippines and a user state South Korea is also considered The interaction of environmental concerns with navigational rights is an important feature of the current law of the sea regime with relevant conventions assessed and the role of the International Maritime Organization in developing navigational standards considered Both European and Canadian practice in the protection of sensitive marine environments and the impact upon navigational rights is also considered Finally the roles of the International Tribunal for the Law of the Sea and the International Maritime Organization in dispute resolution are reviewed before a concluding consideration of the future for navigational rights and freedoms in the twenty first century *Ecology of Marine Deposit Feeders* Glenn

Lopez,Gary Taghon,Jeffrey Levinton,2012-12-06 Deposit feeders animals that derive nutrition from organic matter in sedimentary deposits are dominant among the inhabitants of muds and therefore of the benthos of much of the ocean In this volume the critical research problems pertaining to deposit feeders are identified and promising approaches for dealing with those problems are proposed Interdisciplinary approaches are of utmost importance in the study of deposit feeders and their sedimentary environment merging fields as disparate as nutritional physiology and sediment geochemistry Among the topics presented are advances in theories of foraging and digestion and new experimental approaches to study the potential foods feeding behavior and physiology of animals that ingest sediment *Enclosed Experimental Marine Ecosystems: A Review and Recommendations* Carol M. Lalli,2012-12-06 The application of mesocosms defined in this report as artificial 3 3 experimental enclosures ranging in size from 1 m to 10m to address various problems in the marine sciences has been a relatively recent development The application of the technology was dictated by the realization that many important ocean processes and interactions cannot be fully understood from observations in the natural environment or in smaller enclosures Such studies involve for example determining the interactions between and energy transfer from one trophic level to another the biogeochemical cycling of elements and compounds etc These and similar interactions and rate processes cannot normally be established in situations nature where the detection and quantification of rate processes are confused by advection and or the inability to study the same populations over time In the case of microcosms mixed populations of primary producers consumers and carnivores cannot be maintained in balance for a sufficient length of time to determine normal interactions between the various components of these trophic levels This report prepared by SCOR Working Group 85 critically examines past applications of mesocosms to ocean research though there is no attempt to comprehensively review all literature relevant to the subject Further the report outlines some important advances emanating from their use and provides recommendations for future applications It constitutes the first of two reports from the Working Group see

Cooperation, Environment, and Sustainability in Border Regions Paul Ganster,2001 Hydrodynamics and Sediment Dynamics of Tidal Inlets David G. Aubrey, Lee Weishar,2013-04-18 Along much of the shoreline of the world tidal inlets play an important role in nearshore processes providing links between the coastal oceans and protected embayments Their study is of particular importance not only for the understanding of fundamental processes in coastal oceanography but also for engineering and the proper management of the delicate equilibrium of our shorelines This volume based on the International Symposium on Hydrodynamics and Sediment Dynamics of Tidal Inlets held at Woods Hole MA presents the reader with an overview of contemporary research on these important features The coverage includes mathematical modelling including a review of inlet hydrodynamics observations on hydrodynamics sedimentology and morphology tidal deltas processes and policies pertaining to sedimentation and the impacts of shore protection and dredging in beaches

Salt Water Neighbors Ted L McDorman,2009-02-17 The United States and Canada are salt water neighbors on the Atlantic Pacific and Arctic Oceans Despite the general closeness of the political economic and social relationship the two States have approached their offshore areas from different perspectives Canada has long supported expansion of exclusive national control over its adjacent offshore whereas the United States has been concerned with the balance between national authority and international navigation rights Canada has tended to view maritime disputes with the United States as local matters whereas the United States has tended to see the disputes with Canada in global terms Against this background Salt Water Neighbor s examines both the international ocean law disagreements that exist between the United States and Canada respecting maritime boundaries fisheries and navigation rights e g the Northwest Passage and the numerous cooperative bilateral arrangements that have prevented these disputes from being significant causes of friction between the neighbors There has not been a comprehensive book length study of United States Canada international ocean relations since the early 1970s Much has changed in the last 30 years Most importantly the law and the nature of the disputes between the two States have changed as a result of the adoption of 200 nautical mile zones in the late 1970s **Beyond Walls** Victor A.

Konrad,Heather Nora Nicol,2008 In a comprehensive examination of the Canada USA border post 9 11 this book argues that it has been reinvented as a state of the art technology steeped crossing system while the image of the border has been engineered to appear consistent with the friendly border of the past It shows how a border can evolve and yet continue to function well offering a model for future borderlands elsewhere **Marine Transboundary Conservation and Protected**

Areas Peter Mackelworth,2016-04-28 The marine environment does not naturally respect arbitrary international boundaries The establishment and management of transboundary marine protected areas therefore presents major governance challenges This book analyses a series of marine transboundary conservation initiatives embedded in varying contextual situations to examine the underlying reasons for their success or failure Utilising an adapted pathways of influence

framework it provides insights into the development of marine transboundary conservation initiatives looking at the effectiveness of international rules international norms and discourse market forces and direct access to policy making Examples come from a wide range of jurisdictions including territorial seas continental shelves exclusive economic zones and areas beyond national jurisdiction Case studies include initiatives in the Coral Triangle West Africa Central America the Wadden Sea the Red Sea and the Mediterranean Sea In addition the authors assess the potential for developing wider international cooperation as a result of relationships forged through involvement within these marine transboundary conservation initiatives

Regional Environmental Politics in Northeast Asia Jeongwon Bourdais Park, 2018-11-12 The share of global CO₂ emissions from the core Northeast Asian NEA countries in 2015 was estimated to be as high as 33.63 percent Representing 28.21, 3.67 and 1.75 percent of total global emissions China Japan and South Korea were ranked the first fifth and seventh largest contributors respectively Some parts of China the Republic of Mongolia the Russian Far East and Southeast Asia have long been on serious alert due to accelerated deforestation With their rapid population growth and economic development the core countries of Northeast Asia are responsible both directly and indirectly for numerous environmental problems Urgent individual and collective action is required from the region's governments Against the backdrop of debate on how to understand Northeast Asia as a region Park focuses on the major regional economies of China Japan and South Korea along with Russia North Korea and the Republic of Mongolia due to both their geopolitical proximity and their significance to the region The author attempts to answer the questions How far has regional environmental cooperation progressed in Northeast Asia and Why are Northeast Asian countries reluctant to cooperate further on urgent transboundary and regional environmental issues
