Environmental Experiments About Air:

Environmental Experiments about Air Thomas R. Rybolt, Robert C. Mebane, 1993 Uses text and experiments to provide information about the air around us and about pollution and other problems related to our atmosphere **Advances in Air Pollution Modeling for Environmental Security** István Faragó, Krassimir Georgiev, Ágnes Havasi, 2005-07-14 The protection of our environment is one of the major problems in the society More and more important physical and chemical mechanisms are to be added to the air pollution models Moreover new reliable and robust control strategies for keeping the pollution caused by harmful compounds under certain safe levels have to be developed and used in a routine way Well based and correctly analyzed large mathematical models can successfully be used to solve this task The use of such models leads to the treatment of huge computational tasks The efficient solution of such problems requires combined research from specialists working in different fields The aim of the NATO Advanced Research Workshop NATO ARW entitled Advances in Air Pollution Modeling for Environmental Security was to invite specialists from all areas related to large scale air pollution modeling and to exchange information and plans for future actions towards improving the reliability and the scope of application of the existing air pollution models and tools This ARW was planned to be an interdisciplinary event which provided a forum for discussions between physicists meteorologists chemists computer scientists and specialists in numerical analysis about different ways for improving the performance and the quality of the results of different air pollution models

Change Hajime Akimoto, Hiroshi Tanimoto, 2023-09-27 This handbook covers the air quality air pollution from the viewpoints of causing impacts on human ecosystem health and climate change Traditionally air pollution has been a concern mainly in terms of its impacts on human health and it is still an immediate public and governmental concern in most Asian countries However in recent years so called extreme weather events such as stronger tropical cyclones flooding drought and other phenomena have been manifested causing tremendous losses of human lives and properties Importantly climate models tell us that such extreme weather events are actually induced by anthropogenic global warming It has been pointed out that mitigation or alleviation of such climate change leading to the extreme weather events in the next 30 years can be possible

only by reducing air pollutants with positive radiative forcing such as ozone or methane which are called short lived climate pollutants SLCPs Here concerns about mitigation of air pollutants from the points of human health and climate change have merged This book covers different kinds of air pollutants and radiative forcers and how they can be measured It also mentions the situation of air pollutants in different continents and their regional impacts to human health environment and economy as well as their link to extreme weather events The book presents how the air pollution and climate change can be mitigated and how clean air technologies and international initiatives for co controlling air pollution and climate change have been developed
