Introduction to Environmental Impact Assessment John Glasson, Riki Therivel, Andrew Chadwick, 2005 A clearly structured overview of a key subject this work provides the student with not only a complete introductory text but also a book to support further studies Written by three authors with extensive research and practical experience in Environmental Impact Assessment EIA the treatment is up to date and brings together currently fragmented information from many sources EIA is now firmly on the agenda as a result of the introduction of legislation at both national and international levels and is very much in tune with widespread and growing concern about environmental issues and the impact of development on the environment First introduced in the USA in the 1970s the application of EIA has been accelerated in Europe by the 1985 EC directive which led to its introduction in the UK in 1988 since when it has been a major growth area in planning practice The

originally anticipated 20 environmental impact statements per annum have now grown to well over 300 for projects such as power stations roads new settlements mineral extraction schemes waste disposal installations and tourism developments and this is but the tip of the iceberg Based on highly successful courses at one of the leading schools of planning this book should serve the need for an introduction to EIA that goes beyond first principles and is informed by a wealth of teaching research and practical experience Students on undergraduate and postgraduate planning programmes should find it useful as a course text as will students of environmental management policy environmental sciences studies geography and the built environment Planners developers and decision makers in government and business should also welcome the book as a very effective means of getting to grips with a key new subject which they must fully integrate with their other activities

Environmental Impact Assessment David P. Lawrence, 2003-11-24 This book challenges the prevailing assumption that Environmental Impact Assessment EIA should be structured around a unitary EIA process The book begins by identifying through a scenario eight recurrent problems in EIA practice The characteristics of multiple variations of conventional EIA processes at both the regulatory and applied levels are then presented The residual problems that remain after the conventional processes are described and assessed providing the springboard for a description and analysis of eight alternative EIA processes

Environmental Impact Assessment A.G. Colombo, 2012-12-06 The Joint Research Centre of the European Communities and in particular the Institute for Systems Engineering and Informatics ISEI at Ispra have well established competences in risk analysis uncertainty analysis and statistical data treatment More recently work on Environmental Impact Assessment EIA particularly on environmental indicators and indices and on a system engineering approach to EIA has started This approach attempts to move towards unified procedures to investigate normal operation and accidental risks these are problems concerned within both the EIA Directive 85/337 EEC and the Seveso Directive 82/1501 EEC In May 1990 a Workshop on Indicators and Indices for Environmental Impact Assessment and Risk Analysis was organized at the JRC Ispra The Proceedings of this Workshop Report EUR 13060 EN 1990 are a reference

document in the field This book is based on the papers presented at the Eurocourse EIA191 held at the JRC Ispra in the Autumn of 1991 This was the first course on Environmental Impact Assessment given in the JRC's Eurocourse series at Ispra It was a success because of both the high calibre of the lecturers and the well informed and numerous participants The work focuses on the broader aspects of EIA namely legislation indicators and indices approaches and techniques economic and sociological implications Environmental Impact Assessment, Principles and Procedures R.
