*Alternative Approaches for the Textiles and Fashion Industry* Subramanian Senthilkannan Muthu, 2023-09-26 Environmental impacts created by the textiles and fashion sector are well known and acknowledged by various stakeholders involved in the entire supply chain. The entire lifecycle of textile products creates various impacts to the environment and hence any attempts to alleviate the impacts are highly welcomed. The whole sector is keen to investigate novel sustainable alternatives in terms of raw materials, processes, approaches to make the entire textiles and fashion sector more sustainable. This broad title of novel sustainable alternatives can be split into three subtopics: novel raw material alternatives, novel process alternative, and novel alternative approaches. This volume is dedicated to deal with the novel sustainable alternative approaches for the textiles and fashion industry. Circularity in Textiles Syeda Rubab Batool, Sheraz Ahmad, Yasir Nawab, Muzzamal Hussain, 2023-12-26 This book explains the basic principles of recycling and circularity in textiles. With the emergence of quick fashion, textile manufacturing has expanded significantly over the past few decades. The importance of textiles to human society goes beyond their practical uses in providing warmth, protection, and comfort. Therefore, the usage and production of textiles are enhanced substantially compared to the past globally. As a result, rates of textile production and trash output have grown drastically. The other side of the story is the drastic rate at which they are dumped into landfills, which is almost a garbage truck every second. If this alarming trend continues, there will be serious environmental consequences. It is well known that the textile sector is recognized as the second largest industrial polluter in the world, producing 20% of the global wastewater and accounting for 10% of carbon emissions. Additionally, harmful chemicals are utilized and emitted during the manufacture of textiles, which has an impact on ecosystems and public health. The last 150 years of the textile industrial system fundamentally follow the take-make-dispose principle, in which resources are continuously taken out of a natural system, changed during production, made and used for various purposes within the human system, and then released back into the environment to be disposed of. In this way, manufacturing industries produce waste-producing commodities to make money, which eventually has a negative impact leading to the lack of resources, resulting in price volatility, uncertainty, and economic crises. This book consists of 11 potential chapters to cover all the aspects of circularity in textiles. *Textiles and Clothing Sustainability* Subramanian Senthilkannan Muthu, 2016-08-20 This book comprehensively covers the topic of sustainability in the clothing and fashion sector. Sustainability is applied under different industrial sectors, and there has to be a distinction in every industrial sector when it comes to sustainability in its application. Though the definition is common for sustainability, sustainability in the clothing sector has its unique objectives, principles, and limitations, which this book highlights.
