DiMento, 2013-06-29 We are in the second decade of modern environmental law By some indicators this body of regulation has matured greatly We can point to statutes and codes at the federal state and local levels which address almost every conceivable form of pollution and environmental insult Yet despite the existence of this large body of law despite considerable expenditures on enforcement and despite the energetic efforts of people sympathetic to environmental objectives violations are numerous Serious pollution problems are commonplace Love Canal the Valley of the Drums Times Beach and Stringfellow Acid Pits epitomize the national environmental quality challenge Daily a major illegal disposal of hazardous waste is recorded a new mismanaged dump site is discovered a toxic substance is found in our drinking water or a failure to meet a water or air quality standard is identified Many of these violations involve American business Failures to comply are of several types A small businessman in Pennsylvania mistakenly allows a spillover of a pollutant into a protected stream An industrialist in the Midwest adds to his fortune by illegally dumping dangerous chemicals A series of errors by several firms some of which no longer exist combine to create a health threatening conflagration on the West Coast An automobile company interprets one of the almost innumerable air pollution rules differently from government It produces a car which the government says fails to comply with the Clean Air Act **The Bridge at the Edge of the World** James Gustave Speth, 2008-10-01 How serious are the threats to our environment Here is one measure of the problem if we continue to do exactly what we are doing with no growth in the

human population or the world economy the world in the latter part of this century will be unfit to live in Of course human activities are not holding at current levels they are accelerating dramatically and so too is the pace of climate disruption biotic impoverishment and toxification In this book Gus Speth author of *Red Sky at Morning* and a widely respected environmentalist begins with the observation that the environmental community has grown in strength and sophistication but the environment has continued to decline to the point that we are now at the edge of catastrophe Speth contends that this situation is a severe indictment of the economic and political system we call modern capitalism Our vital task is now to change the operating instructions for today s destructive world economy before it is too late The book is about how to do that

Environmental Regulation Through Financial Organisations: Comparative Perspectives on the Industrialised Nations Benjamin Richardson, 2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance **Managing the global environment**, 1990 **Socio-Economics:**

An Interdisciplinary Approach Beat Bürgenmeier, 2012-12-06 This book is intended as a warning against the kind of hard core liberalism which blames state intervention for the disappointing results achieved in matters of macroeconomic competition and social welfare policy In calling attention to the social dimension of economics the book stresses the need for an ethical yardstick which can only be provided by an interdisciplinary approach to the economy One current school of thought claims to have bridged the gap by portraying economics as both positive and normative However this interpretation is inadequate The positive aspect of economics reflecting an approach common in the natural sciences is based on observable facts It highlights causal relationships and seeks to analyse economic mechanisms on the basis of available information This

has led to an emphasis on purely deductive methods which form the basis for many of the conclusions in main stream economics This current of thought is typified by the neoclassical school which takes as its main premise the much disputed hypothesis of economic rationality Human behaviour is deemed to be rational when consumers maximize their satisfaction and producers their profits subject to the constraints of income and production costs respectively Optimal strategies for both consumers and producers can best be determined by the mechanism of market forces

Public Policies for Environmental Protection Paul Portney, Robert N. Stavins, 2010-10-28 The first edition of Public Policies for Environmental Protection contributed significantly to the incorporation of economic analysis in the study of environmental policy Fully revised to account for changes in the institutional legal and regulatory framework of environmental policy the second edition features updated chapters on the EPA and federal regulation air and water pollution policy and hazardous and toxic substances It includes entirely new chapters on market based environmental policies global climate change solid waste and for the first time coverage of the Safe Drinking Water Act Portney Stavins and their contributors provide an invaluable resource for researchers policymakers industry professionals and journalists anyone who needs up to date information on U S environmental policy With their careful explanation of policy alternatives the authors provide an ideal book for students in courses about environmental economics or environmental politics

Red Sky at Morning James Gustave Speth, 2004-01-01 Presents an analysis of the worsening global environmental crisis citing ten contributors to environmental deterioration including affluence the American culture and its values population and poverty

Regulation and the Courts R. Shep Melnick, 2010-12-01 In recent years federal courts have become increasingly aggressive in shaping regulatory policy abandoning their traditional deference to bureaucratic expertise This new judicial activism has been particular evident in the regulation of air pollution R Shep Melnick analyzes the effects a variety of court decisions have had on federal air pollution control policy and assesses the courts institutional capacity for policymaking in such a complex arena In six case studies of environmental programs or issues he examines the interplay among the courts the Environmental Protection Agency Congress and the White House The conventional wisdom is that the courts have improved environmental policymaking but Melnick concludes that as a whole the consequences of court action under the Clean Air Act are neither random nor beneficial He finds that court action has encouraged legislators and administrators to establish goals without considering how they can be achieved widening the gap between promise and performance The results he charges have been increased cynicism serious inefficiencies and inequities and a lack of rational debate An analysis of the institutional characteristics of the judicial branch reveals how these problems have come about and why they are likely to afflict other programs as well as environmental regulation The author proposes several reforms to improve the courts ability to handle regulatory cases

Curbing Acid Rain Marc Chupka, 1987

Land And Soil Management Alfredo Sfeir-Younis, 2019-04-11 Soil erosion has become a problem of crisis proportions in developing countries around the globe and better approaches to land management

are desperately needed This book provides analytical frameworks to guide the creation and appraisal of soil erosion control programs The authors discuss a broad range of important issues involved in designing and implementing more effective soil conservation programs The book begins with a discussion of the physical and economic dimensions of soil erosion and an estimation of the extent of the problem It then explains how to improve the evaluation of soil conservation programs by integrating scientific knowledge with economic methods and procedures A series of practical illustrations graphically demonstrates the application of the concepts derived from the theory The most important organizational institutional technical and macroeconomic aspects of soil and land management appraisal are outlined and the major elements of project or program design are also pinpointed and illustrated Finally the book suggests areas most in need of future research
