Environmental Performance Measurement World Economic Forum, 2002-02-28 Environmental decision making has long been plagued by uncertainties and a lack of critical information The data and analyses needed for thoughtful and systematic action to minimize pollution harms and to optimize the use of natural resources are often unavailable or seem too costly to obtain As a result choices are made on the basis of generalized observations and best guesses or worse yet rhetoric or emotion Environmental Performance Measurement The Global Report 2001 2002 presents a new approach to environmental decision making based on facts and analytic rigor It collects in one place the largest amount of environmental data that has ever been assembled at the nation state scale Presented here is the first serious attempt not only to measure environmental sustainability in one summary indicator but also to rank 122 countries on the basis of this index In addition country profiles provide detailed information about the environmental performance of these countries across 22 critical environmental indicators Written by both academics and practitioners this report is an essential tool for environmental performance decision making in many realms and in all countries across the world

The Latin American Competitiveness Report, 2001-2002 Joaquín Vial, Peter Cornelius, 2002 Throughout the last decade Latin America has made tremendous progress in undertaking significant structural reforms In many countries state owned enterprises have been privatized basic infrastructure has been built and capital markets have been established In more advanced countries in the region foreign investment flows have soared and trade performance has dramatically improved These reforms are even more remarkable when placed in the context of the numerous upheavals both economic and financial that have affected the region in recent years However Latin America is also a region that has failed to deliver the kind of economic performance that most observers expected given its wealth of natural resources proximity to North America and Europe and relative level of development Despite the region's indisputable economic and social accomplishments gains have varied widely among these countries While some have successfully implemented macroeconomic political and institutional reforms many countries have yet to create the necessary conditions for fostering economic growth and competitiveness The Latin American Competitiveness Report 2001 2002 highlights the prospects for growth in the region and more importantly reveals the obstacles to competitiveness Through in depth analysis of regional trends and detailed country profiles the Report assesses the comparative strengths and weaknesses of the leading economies in Latin America It also contains essays on a variety of issues relevant to competitiveness along with an assessment of the impact of the events of September 11th on the longer term prospects of the region The Latin American Competitiveness Report 2001 2002 is an invaluable tool for policymakers business strategists and other important stakeholders as well as essential reading for all with an interest in the region

Environmental Performance Measurement Daniel C. Esty, Peter Cornelius, 2002 Environmental decision making has long been plagued by uncertainties and a lack of critical information The data and analyses needed for thoughtful and systematic

action to minimize pollution harms and to optimize the use of natural resources are often unavailable or seem too costly to obtain. As a result, choices are made on the basis of generalized observations and best guesses or worse yet rhetoric or emotion. Environmental Performance Measurement: The Global Report 2001-2002 presents a new approach to environmental decision making based on facts and analytic rigor. It collects in one place the largest amount of environmental data that has ever been assembled at the nation-state scale. Presented here is the first serious attempt not only to measure environmental sustainability in one summary indicator but also to rank 122 countries on the basis of this index. In addition, country profiles provide detailed information about the environmental performance of these countries across 22 critical environmental indicators. Written by both academics and practitioners, this report is an essential tool for environmental performance decision making in many realms and in all countries across the world.

**The European Competitiveness and Transition Report 2001-2002 : Ratings of Accession Progress, Competitiveness, and Economic Restructuring of European and Transition Economies** World Economic Forum, 2002-02-28. For over a decade, central and eastern Europe has been at the center of one of the most profound economic and political transformations in history. At the start of the 1990s, the region embarked on an ambitious reform program to depart from central planning towards more market-based economies. A decade later and amid significant difficulties, the region has achieved remarkable accomplishments with several countries becoming increasingly integrated into the global economy. Political structures have been transformed and new institutions have emerged. Indeed, the progress in structural reforms achieved in the region has been so substantial that several countries are now at the threshold of European Union membership. Aware of the significance of the successful integration of central and eastern Europe into the global economy, the World Economic Forum and Harvard University are proud to introduce The European Competitiveness and Transition Report, a thorough review of the transition process that has unfolded in the last decade. This comprehensive report presents new data and expert commentary on what the facts say about the enlargement of the European Union and the competitiveness and growth potential of both Europe and the candidate countries. It addresses the many important factors that will determine how these countries will fare in terms of economic growth over the next ten to twenty years. Written by independent experts, The European Competitiveness and Transition Report 2001-2002 is a truly unique data-driven guide that lays out the facts and reveals the real issues behind European enlargement.

*Managing the Business Case for Sustainability* Stefan Schaltegger, Marcus Wagner, 2017-09-08. The difficulties in moving towards corporate sustainability raise the question of how environmental and social management can be integrated better with economic business goals. Over the last decade, the relationship between environmental and economic performance and more recently the interaction between sustainability performance and business competitiveness have received considerable attention in both theory and practice. However, to date, only partial

aspects of the relationship between sustainability performance competitiveness and economic performance have been studied from a theoretical as well as an empirical perspective And to date no unique relationship has prevailed in empirical studies A number of explanations have been put forward to explain this including methodological reasons such as the lack of statistical data the low quality of that data or the fact that such data is often available for short time periods only Other theoretical explanations have been developed such as the influence of different corporate strategies or the relatively small influence of environmental or sustainability issues as one factor among many on the economic or financial success of firms So how should the business case for sustainability be managed This is the starting point for this book which compiles insights on a large number of aspects of the link between sustainability performance business competitiveness and economic success in an attempt to provide a comprehensive and structured view of this relationship The book provides an unrivalled body of knowledge on the state of theory and practice in this field and identifies prospective future fields of work The book includes conceptual frameworks for the interaction of social environmental and economic issues in business environments case studies of companies that have successfully integrated social environmental and economic issues analyses of the causal and empirical relationship between environmental and or social performance business performance and firm level competitiveness concepts and tools useful for improving business value with proactive operational strategies assessment of the factors influencing operational sustainability strategies and their economic impact and comparisons of interactions between sustainability performance and firm competitiveness across industry sectors and countries Managing the Business Case for Sustainability is the definitive work in its field the most comprehensive book yet published on the theory and practice of managing sustainability performance competitiveness environmental social and economic performance in an integrated way It will be essential reading for managers academics consultants fund managers governments and government agencies NGOs and international bodies who need a broad and comprehensive overview of the business case for sustainability

Air Pollution During Growth Kirk Hamilton, 2004 New research on urban air pollution casts doubt on the conventional view of the relationship between economic growth and environmental quality This view holds that pollution automatically increases until societies reach middle income status because poor countries have neither the institutional capacity nor the political commitment necessary to regulate polluters Some policymakers and researchers have cited this model called the environmental Kuznets curve or EKC when arguing that developing countries should grow first clean up later However new evidence suggests that the EKC model is misleading because it mistakenly assumes that strong environmental governance is not possible for poor countries As the authors show in this paper the empirical relationship between pollution and income becomes much weaker when measures of governance are added to the analysis Their results also suggest that previous research has underestimated the effect of geographic vulnerability climate and terrain factors on air quality The authors find that weak governance and geographic vulnerability alone can account for the crisis levels of air

pollution in many developing country cities When these factors are combined with income and population effects the authors have a sufficient explanation for the fact that some cities already have air quality comparable to levels in OECD urban areas To summarize their results suggest that the maxim grow first clean up later is too simplistic Appropriate urban growth strategies can steer development toward cities with lower geographic vulnerability and governance reform can reduce air pollution significantly long before countries reach middle income status This paper a joint product of the Infrastructure and Environment Team Development Research Group the Environment Department and the Global Environment Facility is part of a larger effort in the Bank to understand governance and pollution World Bank web site

**Stumbling Toward Sustainability** John C. Dernbach,2002 In 1992 at the United Nations Conference on Environment and Development in Rio de Janeiro the nations of the world agreed to implement an ambitious plan for ecologically sustainable human development This book is a comprehensive review of U S efforts to achieve such development since Rio The U S has unquestionably begun to take steps toward sustainable development Yet the nation is now far from being a sustainable society and in many respects is farther away than it was in 1992 Nevertheless legal and policy tools are available to put the U S on a direct path to sustainability This book brings together 42 distinguished experts from a variety of backgrounds and academic disciplines It is among the most thorough assessments ever conducted of U S law and policy concerning the environment

**Regional Competitiveness** Ron Martin,Michael Kitson,Peter Tyler,2012-11-12 There is now a wide spread interest in regions as a key focus in the organization and governance of economic growth and wealth creation This important book considers the factors that influence and shape the competitive performance of regions This is not just an issue of academic interest and debate but also of increasing policy deliberation and action However as the readings in this book make clear the very idea of regional competitiveness is itself complex and contentious Many academics and policy makers have used the concept without fully considering what is meant by the term and how it can be measured Policy formulation has tended to rush ahead of understanding and analysis and the purpose of this book is to close this important gap in understanding This book was previously published as a special issue of Regional Studies

**Corruption and Post-Conflict Peacebuilding** Dominik Zaum,Christine Cheng,2012-02-20 This edited volume

explores and evaluates the roles of corruption in post conflict peacebuilding The problem of corruption has become increasingly important in war to peace transitions eroding confidence in new democratic institutions undermining economic development diverting scarce public resources and reducing the delivery of vital social services Conflict affected countries offer an ideal environment for pervasive corruption Their weak administrative institutions and fragile legal and judicial systems mean that they lack the capacity to effectively investigate and punish corrupt behaviour In addition the sudden inflow of donor aid into post conflict countries and the desire of peacebuilding actors including the UN the international financial institutions aid agencies and non governmental organisations to disburse these funds quickly create incentives and opportunities for corruption While corruption imposes costs and compromises on peacebuilding efforts opportunities for exploiting public office can also be used to entice armed groups into signing peace agreements thus stabilising post war environments This book explores the different functions of corruption both conceptually and through the lens of a wide range of case studies It also examines the impact of key anti corruption policies on peacebuilding environments The dynamics that shape the relationship between corruption and the political and economic developments in post conflict countries are complex This analysis highlights that fighting corruption is only one of several important peacebuilding objectives and that due consideration must be given to the specific social and political context in considering how a sustainable peace can be achieved This book will be of great interest to students of peacekeeping and peacebuilding criminology political economy war and conflict studies international security and IR

Zoeteman,J. Pieters,Paul van Seters,2012-01-01 Acclaim for the first edition This is undoubtedly a useful collection of essays for environmental policy makers and anyone interested in the relationship between national government and transnational forces the collection brings together some interesting perspectives and should prove a useful complement to the existing political sociology of the environment International Sociology Review of Books The Handbook of Globalisation and Environmental Policy is a very important book More than 40 experienced authors including some of the most important international thought leaders of our time have confronted a crucial question How can and should national governments come to grips with the need for global action on a wide range of increasingly urgent environmental challenges that exceed their authority and capability Through close examination of numerous case studies a balanced perspective that takes government business and civil society into account and fresh interdisciplinary thinking about a range of policy tools the Handbook offers a treasure trove of new concepts and new perspectives The authors conclude that by acknowledging the ongoing erosion of national sovereignty and accepting the growing need to work together in supranational forums national governments can in fact increase their

Unique Environmentalism Gunnar Grendstad, Per Selle, Kristin Stromsnes, Oystein Bortne, 2006-11-28 their collective action The more unique the case the more we need to study it not only to understand the case itself but also to understand the structure and limits of environmentalism in general We hope that we have been able to show the value of this research strategy The way we have organized our study is different from the Rootes study 2003 This study emphasizes the importance of different environmental cultures and of political conjunctures in a single country of which different environmental groups take advantage We are not arguing against the fact that branches of environmentalism have features in common across countries e g animal rights and antinuclear movements However we would not go as far as the Rootes study We argue that looking at political conjunctures even if important does not tell the whole story Researchers need to understand the broader context in which political conjunctures and environmental culture operate
