Behavior, Health, and Environmental Stress Sheldon Cohen, Gary W. Evans, Daniel Stokols, David S. Krantz, 2013-06-29 Eight years ago, four psychologists with varying backgrounds but a common interest in the impact of environmental stress on behavior and health met to plan a study of the effects of aircraft noise on children. The impetus for the study was an article in the *Los Angeles Times* about architectural interventions that were planned for several noise-impacted schools under the air corridor of Los Angeles International Airport. These interventions created an opportunity to study the same children during noise exposure and then later after the exposure had been attenuated. The study was designed to test the generality of several noise effects that had been well established in laboratory experimental studies. It focused on three areas: the relationship between noise and personal control, noise and attention, and noise and cardiovascular response. Two years later, a second study designed to replicate and extend findings from the first was conducted.

Population Medicine and Health Economics Simiao Chen, An Pan, Till Bärnighausen, Chen Wang, Qiushi Chen, 2024-10-04 Population medicine is an emerging medical discipline that aims to maximize aggregate and long-term population health by mobilizing accessible resources through its five core responsibilities: prevention, diagnosis, control, treatment, and recovery, integrating and applying knowledge, principles, and technologies of modern medicine and related disciplines, coordinating individual health behaviors and collective health actions, and serving as the medical foundation of public health practices. Population health economics is important in population medicine and public health. Since resources are limited in order to maximize the aggregate and long-term population health benefit, we must produce and allocate resources in an effective and efficient manner. The value of

healthcare interventions are often underestimated and health resources are mostly insufficient The broader social and economic values of healthcare interventions are frequently ignored It is important that we distribute health resources wisely and maximize efficiencies at all three levels micro meso and macro levels Thus this Research Topic focuses on how population health economics as both a key method and a value can help population medicine practitioners to provide better and more efficient care to the population they serve
