Engineering Reliability and Risk in Water Resources
L. Duckstein, Erich J. Plate, 2012-12-06 Hydraulic hydrologic and water resources engineers have been concerned for a long time about failure phenomena One of the major concerns is the definition of a failure event E of its probability of occurrence P_tE and of the complementary notion of reliability However as the stochastic aspects of hydraulics and water resources engineering were developed words such as failure reliability and risk took on different meanings for different specialists For example risk is defined in a Bayesian framework as the expected loss resulting from a precisely defined failure event while according to the practice of stochastic hydraulics it is the probability of occurrence of a failure event The need to standardize the various concepts and operational definitions generated numerous exciting discussions between the co editors of this book during 1983 84 when L Duckstein under sponsorship of the Alexander von Humboldt Foundation FRG was working with E Plate at the Institute of Hydrology and Water Resources of the University of Karlsruhe After consulting with the Scientific Affairs Division of NATO an organizing committee was formed This committee J Bernier France M Benedini Italy S Sorooshian U S A and co directors L Duckstein U S A and E J Plate F R G brought into being this NATO Advanced Study Institute ASI Precisely stated the purpose of this ASI was to present a tutorial overview of existing work in the broad area of reliability while also pointing out topics for further development
