Environmental Standards:

Environmental Standards Klaus Pinkau, Ortwin Renn, 2013-03-14 It is not uncommon that a group of scientists from many different disciplines join a working group discuss a topic of interest and edit a volume of articles related to this topic They may even agree on a jointly written introduction or conclusion The study group Environmental Standards established in 1987 as an expert panel of the German Academy of Sciences and Technology in Berlin broke with that common tradition and became involved in a fascinating but also pain staking experiment to compose a document on setting environmental standards that has been literally written and authorized by all group members The group consisted of eleven individuals representing the following disciplines physics chemistry biology engineering law psychology and sociology economics The study group had two major goals First to provide a document that summarizes the state of the art in each discipline with respect to the topic of environmental standards Since it is impossible to cover all environmental hazards in one book the panel members agreed to limit the discussion of the scientific material to one major case study the effects of ionizing radiation This topic was selected because the scientific data base is well developed in this area and levels of anthropogenic release can be compared with natural background levels These two conditions are rarely met by most chemical hazards

Environmental Standards Christian Streffer, Josef Bücker, Adrienne Cansier, Dieter Cansier, Carl Friedrich Gethmann, Robert Guderian, Gerd Hanekamp, Dietrich Henschler, Gerald Pösch, Eckard Rehbindner, Ortwin Renn, Marco Slesina, Kerstin Wuttke, 2013-06-29 The rapid growth of the world population nearly six fold over the last hundred years combined with the rising number of technical installations especially in the industrialized countries has lead to ever tighter and more strained living spaces on our planet Because of the inevitable processes of life man was at first an exploiter rather than a careful preserver of the environment Environmental awareness with the intention to conserve the environment has grown only in the last few decades Environmental standards have been defined and limit values have been set largely guided however by scientific and medical data on single exposures while public opinion on the other hand now increasingly calls for a stronger consideration of the more complex situations following combined exposures Furthermore it turned out that environmental standards while necessarily based on scientific data must also take into account ethical legal economic and sociological aspects A task of such complexity can only be dealt with appropriately in the framework of an inter disciplinary

which economic and environmental interests are balanced in their legal systems The authors all use a common framework to improve the comparability of the country studies The different country related chapters do not only provide insights into the formally applicable legal rules law in the books but given that the book brings together academics aware of the practice in Africa they also describe the way in which environmental policy functions in practice law in action Many case studies with conceptual analyses are provided of pollution incidents and the way in which administrative agencies or courts have on those occasions balanced the interests between the economy society and the environment A critical comparative analysis by the editors points at tendencies towards convergence and points of divergence between the African countries Suggestions for policy reform are also formulated showing African countries how they can benefit from experiences in the US and Europe This thought provoking volume is a must for anyone academic policymaker or practitioner interested in sustainable development generally and in Africa in particular P 4 of cover

Environmental and Energy Law Karen Makuch,Ricardo Pereira,2012-07-23 Despite bringing prosperity industrialisation generally leads to increasing levels of pollution which has a detrimental impact on the environment In response legislation which seeks to control or prevent such impact has become common Similarly climate change and energy security have become major drivers for the regulatory regimes that have emerged in the energy field Given the global or regional scope of many environmental problems international cooperation is often necessary to ensure such legislation is effective The EU and the UK have contributed to the development of the environmental and energy law regimes currently in force spanning across international transnational and national levels At the same time practical responses to environmental and energy problems have largely been the focus of engineers scientists and other technical experts Environmental Energy Law attempts to bridge the knowledge gap between legal developments designed to achieve environmental and or energy related objectives and the practical scientific and technical considerations applicable to the same environmental problems In particular it attempts to convey a broad range of topical issues in environmental and energy law from climate and energy regulation technology innovation and transfer to pollution control environmental governance and enforcement In addition the book outlines key sector specific legal regimes including water waste and air quality management focusing on issues or topics that are particularly relevant to both environmental and energy lawyers and engineering science and technology oriented professionals and students In this vein the book guides the reader on some basic practical applications of the law within scientific engineering and other practical settings The book will be useful to all those working or studying in the environmental or energy arena including law students legal professionals engineering and science students and professionals By adopting a multi disciplinary approach to environmental and energy law the book embraces all readerships and helps to address the often thorny problem of communication between scientists engineers lawyers and policy makers
