Music has been examined from multiple perspectives as a product of human history for example or a product of human
culture But there is also a long tradition intensified in recent decades of thinking about music as a product of the human
mind Whether considering composition performance listening or appreciation the constraints and capabilities of the human
mind play a formative role The field that has emerged around this approach is known as the psychology of music Written in a
lively and accessible manner this volume connects the science to larger questions about music that are of interest to
practicing musicians music therapists musicologists and the general public alike For example Why can one musical
performance move an audience to tears and another compel them to dance clap or snap along How does a hype playlist
motivate someone at the gym And why is that top 40 song stuck in everyone s head ABOUT THE SERIES The Very Short
Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized
