Environmental Limits to Motorisation Urs Heierli, 1993 This book examines non motorised transport bicycles rickshaws electric vehicles as a decisive component in a new strategy for urban development in both developing and developed countries It provides useful case studies tables and many illustrations Economic Instruments and Regulatory Measures for the Demand Management of Urban Transport ,1997 Transport Systems, Policy and Planning Rodney Tolley, Brian John Turton, 2014-07-15 Provides a unique review of the major spatial aspects of transport systems a detailed analysis of transport problems in urban and rural areas an evaluation of social and environmental impacts and a planning and policy overview Divided into four parts each considering a different aspect of transport geography The first part outlines the basic geography of transport and examines transport and spatial structures focusing upon the varying contributions made by transport to industrial agricultural and urban development Part two moves to consider specific transport systems at both national and international scales drawing on studies from industrialised and developing nations and discussing the effects upon transport of the political changes in the former USSR and Eastern Europe The third part examines some of the many problems of transport and urban and rural areas using specific examples to illustrate the contrasting difficulties and evaluate current urban transportation planning methods *Environmental Transition and Technological Change* Transition Smail Ait-El-Hadj, 2024-06-18 Faced with the scale and intensity of the ecological crisis environmental transition is underway consisting of a first phase of technological mutation aimed at replacing technologies harmful to the environment with those which have no destructive effects on the earth system and its equilibrium This book examines the roots of the concept of environmental transition identifying and characterizing the negative effects of technology on the environmental crisis We will then identify the technological mutations that have the potential to contribute to environmental transition and demonstrate how these changes are already forming part of a new emerging technological system We will conclude by addressing the question of the limits of technological responses to the environmental crisis demonstrating the importance of the dimensional factors of human activity and weight of growth in this crisis thus raising the issue of global reconsideration with reference to the place and articulation of human activity in the Earth system *Urban Transport Environment and Equity* Eduardo Alcantara Vasconcellos, 2014-05-01 Traditional transport planning has generated transport systems that propagate an unfair distribution of accessibility and have environmental and safety issues This book highlights the importance of social and political aspects of transport policy and provides a methodology to support this approach It emphasizes the importance of coordinating urban transport and traffic planning and addresses the major challenge of modifying the building and use of roads The author makes suggestions for innovative and radical new measures towards an equitable and sustainable urban environment Project Management Paul Gardiner, 2017-09-16 Project Management is designed to appeal to undergraduate and postgraduate students studying project management on a business degree It provides a comprehensive overview of

project management practice while carefully balancing the unique aspects of project management curricula with the more general business skills including quality risk teams and leadership The text includes a wide range of cases to connect the academic principles and the complexity of real life projects The text is also supported by web based multiple choice questions as well as in text exercises and examples to illustrate the concepts and ideas throughout the book **Scaling Urban**

Environmental Challenges Peter J Marcotullio, Gordon McGranahan, 2012-06-25 Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles Written by leading experts in the fields of urban development and environmental planning the book reviews the urban environmental shifts that have shaped today's challenges and examines conditions and problems in the urban centres of low middle and high income countries Case studies address such economically diverse cities as Accra New Delhi Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation The book concludes by exploring and analysing different scales of governance The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse gas emissions but that scale is crucial in both understanding the problems and devising successful responses Published with UNU IAS and IIED *Vital Signs 1997-1998* Lester R. Brown, 2014-04-23 The sixth annual guide to the environmental economic and social trends which are shaping the future this text presents the good news the bad news and a few surprises about the state of our planet n Part One facing pages of text and graphs provide information on 40 carefully selected indicators mapping changes in food supplies agriculture the atmosphere energy and transport natural resources the global economy society and health and the military Part Two of the text contains special features on less celebrated trends including ten new vital signs indicators such as violence against women how the environment impacts on the insurance industry and the proliferation of landmines

Motor Vehicles, the Environment, and the Human Condition Hans A. Baer, 2019-10-09 The world now has more than a billion motor vehicles and this number continues to increase as developing countries imitate developed societies in their adoption of the culture of automobility This book explores the political ecology of motor vehicles in an era of growing social disparities and environmental crises the latter of which are most manifest in anthropogenic climate change to which motor vehicles constitute a major contributor A political ecological perspective recognizes that motor vehicles perhaps more than any other machine embody the social structural cultural and environmental contradictions of the capitalist world system In addition to highlighting many of the environmental social and health environmental consequences of humanity's increasing reliance on motor vehicles particularly private automobiles this book argues that ultimately we need as a species to move

beyond motor vehicles as much as possible but that such an effort will have be part and parcel of creating an alternative world system based on social justice democratic processes environmental sustainability and a safe climate one termed democratic eco socialism A Reappraisal of the Urban Planning Process Alexander Clement Mosha,1995
