Environment and Society Erika Cudworth, 2005-08-04 At the start of the twenty first century it can be argued that human societies have a greater impact on the environment than ever before We have always been dependent upon and interacted with the natural environment However the dramatic social changes of the past three centuries have altered the form of our relationship with non human nature to the extent that some would see people planet relations as in a situation of crisis Environment and Society provides a comprehensive and critical account of the ways in which we can think about the relationship between human societies and the environments with which they interact It argues that human societies are ecologically embedded and that environments are often socially embedded and constituted It makes the different theoretical

positions and empirical studies accessible to students and includes chapter outlines and summaries annotated further reading boxed case studies and discussion points

Scholz, Claudia R. Binder, 2011-07-21 In an era where humans affect virtually all of the earth's processes questions arise about whether we have sufficient knowledge of human environment interactions How can we sustain the Earth's ecosystems to prevent collapses and what roles should practitioners and scientists play in this process These are the issues central to the concept of environmental literacy This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development Approaching the topic from multiple perspectives it explores the development of human understanding of the environment and human environment interactions in the fields of biology psychology sociology economics and industrial ecology The discussion emphasises the importance of knowledge integration and transdisciplinary processes as key strategies for understanding complex human environment systems HES In addition the author defines the HES framework as a template for investigating sustainably coupled human environment systems in the 21st century New Technologies and Environmental Innovation Joseph Huber, 2004-01-01 Joseph Huber's book contains a wealth of information on technological environmental innovations The scrutiny of this material leads to powerful conclusions with which scholars should concern themselves Highly recommended Ren Kemp Maastricht University The Netherlands This timely and impressive volume brings technology back into the centre of discussions and debates on environmental reform In articulating an ecological modernisation perspective Joseph Huber presents an inspiring optimistic and at times provocative assessment of the potential and future role of radical technological innovations in greening production consumption cycles Arthur P J Mol Wageningen University The Netherlands In this insightful book Joseph Huber investigates the life cycle

Rationality and the Environment Bo Eling, 2012-05-04 Environmental assessment and management involve the production of scientific knowledge and its use in decision making processes The result is that within these essentially rational political assessment frameworks experts are creating and applying scientific knowledge for decision and management purposes that actually have strong ethical and aesthetic dimensions Yet these rational political frameworks lack the tools to provide guidance on ethical and aesthetic issues that affect the wider public This revolutionary work argues that ethical and aesthetic dimensions can only be brought into environmental politics and policies by citizens actively taking a stand on the specific matters in question The author draws on Habermas trisection of rationality as cognitive instrumental moral practical and aesthetic expressive to suggest that truly effective environmental policy needs to activate all three approaches and not favour only the rational To achieve this objective the author argues that public

participation in environmental policy and assessment is necessary to counteract the dictatorship of technical and economic instrumentality in environmental policy the failure to take ethical and aesthetic rationalities into account and more importantly how such policy is applied on the ground to shape our natural and material world
