R. Redclift, 2002-01-01 In the post Cold War era the pre eminent threats to our security derive from human degradation of vital ecosystems as well as the possibility of war and terrorist attack This substantial book examines this new security environment paradigm and the way in which the activities of societies are shifting the balance with nature The distinguished authors investigate this redefinition of security with particular reference to environmental threats such as climate change and the availability of adequate supplies of food and water They illustrate how unfettered economic growth rising levels of personal consumption and unsustainable natural resource and energy

procurement are taking a heavy toll on the global environment This in turn is forcing both developed and developing countries to re evaluate the more immediate environmental security of their own populations For a truly global perspective the authors present a series of country case studies looking at issues of security and environment and comparing how they influence policy and human well being They also discuss a number of theoretical issues which underpin discussions of environmental security demonstrating that this is a relatively new and essentially contested concept

Environmental Change and Human Security in Africa and the Middle East Mohamed Behnassi, Katriona McGlade, 2017-01-17 This volume brings together insights on the interactions between environmental change and human security in the Middle East and Africa These regions face particular challenges in relation to environmental degradation the decline of natural resources and consequent risks to current and future human security The chapters provide topical analysis from a range of disciplines on the theory discourse policy and practice of responding to global environmental change and threats to human security Case studies from Morocco Tunisia Egypt Turkey Iraq and Syria provide empirical evidence with a focus section dedicated to the critical issue of water resources and water security in the region The contributions demonstrate above all that the risks posed to human security arise through multiple and interconnected processes operating across diverse spatial and temporal scales The complexity of these processes requires new ways of thinking and intervening As a contribution the current volume provides engaging insights from theory and practice for those seeking to address the challenges of environmental change

Human and Environmental Security Felix Dodds, Tim Pippard, 2013-06-17 Security has tended to be seen as based on military force yet this illusion is crumbling literally and figuratively before our eyes in the conflict zones of Iraq Afghanistan and Africa It is now clear that real human security defined by the Commission on Human Security as protecting vital freedoms can only be achieved if the full range of issues that underpin human security including environmental integrity are addressed This ground breaking book authored by prominent international decision makers tackles the global human security problem across the range of core issues including terrorism nuclear proliferation access to water food security loss of biodiversity and climate change The authors identify the causes of insecurity articulate the linkages between the different elements of human security and outline an agenda for engaging stakeholders from across the globe in building the foundations of genuine and lasting human security for all nations and all people This is powerful necessary solution focused reading in these times of peril global conflict mass inequity and rampant environmental degradation

Human and Water Security in Israel and Jordan Philip Jan Schäfer, 2012-10-28 The work aims at answering the question as to how far discourses on human security

are present in Jordan and Israel if they converge and if political solutions for the issue of water security could be derived. The analysis is based on the assumption that from a human security perspective common solutions for urgent problems can be derived more easily than out of a perspective of national security. Yet it is acknowledged that according to a new security perspective different security threats are being identified by relevant actors. An empirical analysis of written statements and utterances of the respective security elites establishes the methodological tool for the identification of human security discourses in Israel and Jordan. Subsequently it is estimated how far water is presented as a matter of national security in Israel and Jordan using the theory of securitization.

The Meaning of Environmental Security Jon Barnett, 2001. This book is a comprehensive critical discussion of the new idea of environmental security. Jon Barnett looks at links between environmental degradation and national security. But the meaning of the concept is ambiguous and an examination of its various interpretations and applications reveals much about the state of global environmental politics. Barnett argues that environmental security is ultimately driven more by the power of security makers than by the need to address environmental problems. By systematically uncovering the deficiencies of existing discourses he develops an alternative critical Green approach with practical implications.

Environmental Change and Human Security: Recognizing and Acting on Hazard Impacts Peter H. Liotta, David A. Mouat, W.G. Kepner, Judith Lancaster, 2008-07-31. Environmental and Human Security Then and Now 1 2 ALAN D HECHT AND P H LIOTTA 1 U S Environmental Protection Agency Office of Research and Development 2 Pell Center for International Relations and Public Policy Salve Regina University 1 Nontraditional Threats to Security. The events of September 11 2001 have sharpened the debate over the meaning of being secure. Before 9 11 there were warnings in all parts of the world that social and environmental changes were occurring. While there was prosperity in North America and Western Europe there was also increasing recognition that local and global effects of ecosystem degradation posed a serious threat. Trekking from Cairo to Cape Town thirty years after living in Africa as a young teacher for example travel writer Paul Theroux concluded that development in sub Saharan Africa had failed to improve the quality of life for 300 million people. Africa is materially more decrepit than it was when I first knew it hungrier poorer less educated more pessimistic more corrupt and you can't tell the politicians from the witch doctors. 2002 While scholars and historians will debate the causes of 9 11 for some time one message is clear. An often dizzying array of nontraditional threats and complex vulnerabilities define security today. We must understand them and deal with them or suffer the consequences. Environmental security has always required attention to nontraditional threats linked closely with social and economic well being.

Environmental Challenges in the Mediterranean 2000-2050 Antonio Marquina Barrio, 2004-02-29. This book addresses six key factors that will affect environmental policies in the Mediterranean region during the next fifty years: population growth, climate change, soil erosion and desertification, water scarcity, food production and urbanization and pollution. The authors assess these as potential sources of violent conflict. The interdisciplinary approach makes this a

relevant and useful reference for a broad range of professionals specialists and researchers *Environmental Challenges in the Mediterranean 2000-2050* Antonio Marquina, 2012-12-06 This book collects most of the contributions prepared for the NATO Advanced Research Workshop ARW on Environmental Challenges in the Mediterranean 2000 2050 The ARW took place in Madrid from 2 to 5 of October 2002 Scholars and researchers from North and South of the Mediterranean and other countries from NATO gathered in Madrid for discussing several important factors that could affect Mediterranean security in the next 50 years In this regard the first chapter presents the different debates regarding environmental security that took place in the last decade This chapter is an introductory chapter and takes into account the possible audience in the Southern Mediterranean and the wishes of some contributors For this reason the chapter deals in extenso with the question of human security and the different approaches The ARW dealt with issues that may affect the supply of fundamental goods for human living To this end the complex question of climate change its impact in the Mediterranean the predicted increase in temperatures and predictions about rainfall are analysed As part of this approach a chapter about solar variability and climate change is also added **Earth at Risk in the 21st Century: Rethinking Peace, Environment, Gender, and Human, Water, Health, Food, Energy Security, and Migration** Úrsula Oswald Spring, 2020-04-03 Earth at Risk in the 21st Century offers critical interdisciplinary reflections on peace security gender relations migration and the environment all of which are threatened by climate change with women and children affected most Deep rooted gender discrimination is also a result of the destructive exploitation of natural resources and the pollution of soils water biota and air In the Anthropocene the management of human society and global resources has become unsustainable and has created multiple conflicts by increasing survival threats primarily for poor people in the Global South Alternative approaches to peace and security focusing from bottom up on an engendered peace with sustainability may help society and the environment to be managed in the highly fragile natural conditions of a hothouse Earth Thus the book explores systemic alternatives based on indigenous wisdom gift economy and the economy of solidarity in which an alternative cosmovision fosters mutual care between humankind and nature Special analysis of risks to the survival of humankind in the 21st century Interdisciplinary studies on peace security gender and environment related to global environmental and climate change Critical reflections on gender relations peace security migration and the environment Systematic analysis of food water health energy security and its nexus Alternative proposals from the Global South with indigenous wisdom for saving Mother Earth **Climate Change, Ethics and Human Security** Karen O'Brien, Asunción Lera St. Clair, Berit Kristoffersen, 2010-07-22 Presenting human security perspectives on climate change this volume raises issues of equity ethics and environmental justice as well as our capacity to respond to what is increasingly considered to be the greatest societal challenge for humankind Written by international experts it argues that climate change must be viewed as an issue of human security and not an environmental problem that can be managed in isolation from larger questions concerning development trajectories and ethical obligations

towards the poor and to future generations The concept of human security offers a new approach to the challenges of climate change and the responses that could lead to a more equitable and sustainable future Climate Change Ethics and Human Security will be of interest to researchers policy makers and practitioners concerned with the human dimensions of climate change as well as to upper level students in the social sciences and humanities interested in climate change

Human and Environmental Security in the Era of Global Risks Mohamed Behnassi,Himangana Gupta,Olaf Pollmann,2018-10-24 This book discusses ways to deepen the debate on the linkages between global risks and human and environmental security The approach put forward in this book is one of questioning the ability of existing concepts regulatory frameworks technologies and decision making mechanisms to accurately deal with emerging risks to human and environmental security and to act in the direction of effectively managing their impacts and fostering the resilience of concerned systems and resources Empirical research findings from Africa Asia and the Pacific Islands are provided During the last decades the links between emerging risks and the security of humans and nature have been the object of considerable research and deliberations However it is only recently becoming an important focus of policy making and advocacy In this contributed volume it is presumed that the ability or lack thereof to make innovative conceptual frameworks institutional and policy arrangements and technological advances for managing the current emerging risks will foster or undermine the environmental security and consequently determine the future human security Moreover taking into account the links between environmental climate security human security and sustainability will help frame a new research agenda and potentially develop a broad range of responses to many delicate questions
