Environment and Statecraft : The Strategy of Environmental Treaty-Making Scott Barrett, 2003-01-09 Environmental problems like global climate change and stratospheric ozone depletion can only be remedied if states cooperate with one another But sovereign states usually care only about their own interests So states must somehow restructure the incentives to make cooperation pay This is what treaties are meant to do A few treaties such as the Montreal Protocol on Substances that Deplete the Ozone Layer succeed Most however fail to alter the state behaviour appreciably This book develops a theory that explains both the successes and the failures In particular the book explains when treaties are needed why some work better than others and how treaty design can be improved The best treaties strategically manipulate the incentives states have to exploit the environment and the theory developed in this book shows how treaties can do this The theory integrates a number of disciplines including economics political science international law negotiation analysis and game theory It also offers a coherent and consistent approach The essential assumption is that treaties be self enforcing that is individually rational collectively rational and fair The book applies the theory to a number of environmental problems It provides information on more than three hundred treaties and analyses a number of case studies in detail These include depletion of the ozone layer whaling pollution of the Rhine acid rain over fishing pollution of the oceans and global climate change The essential lesson of the book is that treaties should not just tell countries what to do Treaties must make it in the interests of countries to behave differently That is they must restructure the underlying game Most importantly they must create incentives for states to participate in a treaty and for parties to comply

precalculus final exam practice problems university of minnesota - Apr 03 2023

web precalculus final exam practice problems example solve $\cos^2 x \cos x = 0$ algebraically for exact solutions in the interval $[0, 2\pi]$
 $\cos^2 x \cos x = \cos^2 x \sin^2 x \cos x = \cos^2 x (1 - \cos^2 x) = \cos^2 x - \cos^4 x = 0$ let $y = \cos^2 x$ then $y - y^2 = 0$ $y(1 - y) = 0$ $y = 0$ or $y = 1$
 $\cos^2 x = 0 \Rightarrow \cos x = 0 \Rightarrow x = \frac{\pi}{2}, \frac{3\pi}{2}$
 $\cos^2 x = 1 \Rightarrow \cos x = \pm 1 \Rightarrow x = 0, \pi, 2\pi$
