Markovits, 2020-05-30 This book examines the implications of The General Theory of Second Best for analyzing the economic efficiency of non government conduct or government policies in an economically efficient way It develops and legitimates an economically efficient economic efficiency analysis protocol with three unique characteristics First the protocol focuses separately on each of a wide variety of categories of economic inefficiency many of which conventional analyses ignore Second it analyzes the impact of conduct or policies on each of these categories of economic inefficiency primarily by predicting the respective conduct s policy s impact on the distortion that the economy s various Pareto imperfections generate in the profits yielded by the resource allocations associated with the individual categories of economic inefficiency i e on the difference between their profitability and economic efficiency And third it is third best i e it instructs the analyst to execute a theoretical or empirical research project if and only if the economic efficiency gains the project is expected to generate by increasing the accuracy of economic efficiency conclusions exceed the predicted allocative cost of its execution and public financing The book also uses the protocol to analyze the economic efficiency of specific policies so as to illustrate both how it differs from the protocols that most applied welfare economists continue to use and how its conclusions differ from those produced by standard analysis Dimensions of Environmental and Ecological Economics Nirmal Chandra Sahu, Amita Kumari Choudhury, 2005 Besides Covering The Paradigmatic Bases Of Environmental Ecological And Natural Resource Economics This Book Discusses The Economic Dimensions Of And Approaches To Pollution Environmental And Ecosystem Management Biodiversity Global Warming Energy And Resource Use And Sustainable Development Introduction to Environmental Economics Jason F. Shogren, 2004 **The Theory and Practice of Environmental and Resource Economics** Karl-Gustaf Löfgren, 2006 This collection of specially commissioned

papers pays tribute to Karl Gustaf Lofgren's significant and diverse contribution to theoretical and empirical research within the field of environmental and resource economics over the past two decades. A number of distinguished scholars examine a broad range of topics including sustainability risk and uncertainty, demand theory and issues related to public goods. The book also contains analyses of more specific resource problems concerning fisheries, forestry, management, wildlife and pollution. Together the seventeen chapters provide an innovative and cutting edge analysis of a smorgasbord of both old and new environmental and resource problems including amongst others local public goods and income heterogeneity, self selection and the value of lives saved, international fisheries agreements, salmon and hydropower, discrete versus continuous harvesting, timber supply, voluntary road pricing, economic impacts of environmental regulations in California. Academics, researchers and students within the fields of environmental resource and public economics will find this book to be a fascinating read.

Applied Research in Environmental Economics Christoph Böhringer, Andreas Lange, 2006-03-30

Sustainable development, climate policy and biodiversity conservation are examples of issues on the current political agenda in many countries. These themes are also subject to economic research and economic insights are increasingly finding their way into the design of environmental policy. Still the reception of academic findings by policy makers as well as the timely identification of policy relevant questions by economic researchers often seem to be problematic. This volume attempts to vitalise the exchange between policy makers and academics. It offers a snapshot of environmental economic research on a range of policy relevant problems. Academic contributions are complemented by views of policy makers on priority fields in environmental policy, the usefulness of academic research for decision making and requirements to applied research in the future.

Environmental Law, Policy, and Economics Nicholas Askounes Ashford, Charles C. Caldart, 2008. The past twenty five years have seen a significant evolution in environmental policy with new environmental legislation and substantive amendments to earlier laws, significant advances in environmental science and changes in the treatment of science and scientific uncertainty by the courts. This book offers a detailed discussion of the important issues in environmental law, policy and economics, tracing their development over the past few decades through an examination of environmental law cases and commentaries by leading scholars. The authors focus on pollution, addressing both pollution control and prevention but also emphasize the evaluation, design and use of the law to stimulate technical change and industrial transformation, arguing that there is a need to address broader issues of sustainable development. *Environmental Law, Policy and Economics* which grew out of courses taught by the authors at MIT, treats the traditional topics covered in most classes in environmental law and policy including common law and administrative law concepts and the primary federal legislation. But it goes beyond these to address topics not often found in a single volume: the information based obligations of industry, enforcement of environmental law, market based and voluntary alternatives to traditional regulation, risk assessment, environmental economics and technological innovation and diffusion. Countering arguments found in other texts that

government should play a reduced role in environmental protection this book argues that clear stringent legal requirements coupled with flexible means for meeting them and meaningful stakeholder participation are necessary for bringing about environmental improvements and technological transformations
