**Accounting** Isabell Keil,2004-09-08 Essay from the year 2003 in the subject Business economics Investment and Finance grade 1 3 A University of Glamorgan language English abstract The importance placed on environmental issues has increased during the last two decades Businesses have become increasingly aware of the environmental implications on their operations products and services Environmental risks may have serious consequences for the prospects of a company with particular financial consequences Businesses experience increased pressure from various stakeholders to report on environmental behaviour Smith and Lambell 1997 stated that the topic of environmental accounting is not new because many companies already produce environmental statements within their annual reports Traditional accounting techniques such as financial and management accounting are used to report on the environmental implications of a business Smith and Lambell 1997 also argued that companies should cease considering the environment as a given factor and take it into their accounts

This can be done by identifying the environmental costs of a product service or process The environmental costs increased as a consequence of this amongst other reasons The existing conventional accounting systems are not able to deal with these environmental costs because they tend to attribute them to general overhead accounts As result managers are often unaware of them and have no incentive to reduce them UNDSO 2003 Environmental Management Accounting a variant of environmental accounting provides managers with knowledge about these environmental costs by extending conventional methods of accounting to capture them Smith and Lambell 1997 Environmental Management Accounting EMA generates analyses and uses financial and non financial information to support internal management It is a complementary management accounting approach to the financial accounting approach according to Bennett and James 1998a EMA helps to identify and allocate environment related costs and aims to develop appropriate mechanisms for this Frost and Wilmhurst 2000 Key application fields for EMA are assessment of annual environmental costs expenditures product pricing budgeting investment appraisal calculating costs and savings of environmental projects or setting quantified performance targets to name only a few Jasch 2003 Frost and Wilmhurst 2000 stated that EMA practices have resulted in cost savings and competitive advantage

**Implementing Environmental Management Accounting: Status and Challenges** Pall M. Rikhardsson, 2005-07-28 This book brings together examples of leading thinking and international practice in the rapidly developing area of environmental management accounting EMA The authors include academics and practitioners from industry and the subjects covered range from individual company experiences with implementing EMA to national experiences regarding the adoption and diffusion of EMA practices

**Environmental Management Accounting for Cleaner Production** Stefan Schaltegger, Martin Bennett, Roger L. Burritt, Christine M. Jasch, 2008-10-10 Sustainability requires companies to develop in an economically environmentally and socially sustainable manner Corporate sustainable development in turn requires movement towards cleaner production In order to recognize the potential from cleaner production reduced costs and fewer environmental impacts through the reduced use of materials environmental management accounting EMA is a necessary information management tool Environmental Management Accounting for Cleaner Production reveals a set of tools for companies to collect evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options EMA is therefore the key for driving environmental progress cost savings increased competitiveness and corporate sustainability through the means of cleaner production

*Environmental Management Accounting* Stefan Schaltegger, Tobias Hahn, Roger Burritt, 2000 **Environmental Management Accounting** Christian Herzig, Tobias Viere, Stefan Schaltegger, Roger L. Burritt, 2012-03-15 Sustainable development will not happen without substantial contributions from and leading roles of companies and business organizations This requires the provision of adequate information on corporate social and ecological impacts and performance For the last decade progress has been made in

developing and adapting accounting mechanisms to these needs but significant work is still needed to tackle the problems associated with conventional accounting. Until recently research on environmental management accounting (EMA) has concentrated on developed countries and on cost benefit analysis of implementing individual EMA tools. Using a comparative case study design this book seeks to redress the balance and improve the understanding of EMA in management decision making in emerging countries focussing specifically on South East Asian companies. Drawing on 12 case studies taken from a variety of industries *Environmental Management Accounting Case Studies of South East Asian Companies* explores the relationship between decision situations and the motivation for and barriers to the application of clusters of EMA tools as well as the implementation process itself. This book will be useful to scholars interested in the environmental and sustainability management accounting research field and those considering specific approaches to EMA within emerging economies. *Environmental Management Accounting and Supply Chain Management* Roger L. Burritt, Stefan

Schaltegger, Martin Bennett, Tuula Pohjola, Maria Csutora, 2011-05-19 This volume's focus on the environmental accounting of supply chain processes is of particular relevance because these processes supply data about the environmental impact of relationships between business organisations an area where the boundary separating internal and external accounting is ill defined. Here contributors advocate what they term accounting for cooperation as a more environmentally positive complement to the paradigmatic practice of accounting for competition. **Environmental Management Accounting**

Delphine Gibassier, Simon Alcouffe, 2019 In this editorial we review how environmental management accounting (EMA) and controls (EMCS) are linked with sustainability. We present six avenues for research to investigate further how EMA and EMCS can contribute to the missing link to sustainability. Finally we present the four contributions to this special issue.

*Improving Governments' Role in the Promotion of Environmental Managerial Accounting* United Nations. Division for Sustainable Development, 2000 Recent years have seen increasing pressures and incentives for the adoption of cleaner production processes and pollution prevention measures by industry emerging from both inside and outside of commerce. Internally the driver is to reduce the producers costs associated with waste and compliance with regulations. Externally the corporate environmental performance is increasingly scrutinised by investors, regulatory bodies and the public at large. Some enterprises are reviewing and changing their management procedures in order to measure more accurately the costs of

environmental impacts and the benefit of environmental protection With increasingly tough environmental protection policies come steadily increasing business costs Conventional managerial accounting systems do not adequately identify these costs thereby complicating or preventing actions to reduce them Environmental managerial accounting EMA covers a variety of techniques for identifying and measuring the full range of environmental costs While managerial accounting systems are traditionally viewed as matters internal to a business the potential public benefits that can result from their widespread adoption by corporations provide an incentive for an active government role in promoting such systems This report presents the considerations from a series of United Nations sponsored expert meetings on how governments might promote and advance EMA
