Environmental Philosophy Principles And Prospects Avebury Series In Philosophy

E. Beinat, Peter Nijkamp

Environmental Philosophy Principles And Prospects Avebury Series In Philosophy:

Environmental Philosophy Robin Attfield,1994 These 16 essays in environmental philosophy throw light on our traditions of environmental thinking and on its principles and applications

Religious Philosophies and Environmental Ethics Muzzamel Hussain Imran,2024-11-13 Religious Philosophies and Environmental Ethics addresses the critical environmental crisis caused by human activity and examines how religious philosophies can contribute to solutions The book explores the intersection of environmental ethics and religious thought offering a fresh perspective on how spiritual beliefs might help guide humanity toward sustainable living It examines the causes of environmental degradation and various religious perspectives on the issue and proposes faith based solutions for a more harmonious relationship with nature Through a blend of philosophical inquiry and practical application the book aims to inspire change in how we approach environmental conservation

Key Features Explores the role of religious philosophies in solving environmental problems Discusses the ethical implications of environmental degradation Offers faith based solutions for future sustainability Proposes a new framework for integrating religious thought into environmental policy

Current Challenges of Environmental Philosophy ,2023-09-04 It is extremely difficult to seek new paths in the twilight of our former idols ideals and visions of a happy and successful life The authors of the book invite the reader to embark on this journey in a free spirited manner and to look at the challenges posed by the new climate regime from different perspectives Whether one accepts the concept of the Anthropocene as a starting point or rather as an opportunity for constructive criticism readers will be fully engaged by thinking through historical philosophical scientific political social as well as educational problems

Environmental Futures Ben Fairweather,Sue Elworthy,Matt Stroh,Piers H.G. Stephens,1999-04-12 The book comprises thirteen papers on environmental issues with particular reference to future developments for example new technologies paths in social and political theory methodologies It is divided into three sections moving from social constructions of the environment in the first section to questions of green political theory and practice in the second and concluding with issues of environmental risk and future technologies The work is interdisciplinary with contributors ranging from philosophers to human geographers

Global Environmental Change Antoinette Mannion,2014-09-19 Now in its second edition This text has been extensively revised and rewritten to reflect the growth in environmental research during the last decade Human induced environmental change is occurring at such a rapid rate that inevitably the fundamental processes involved in biogeochemical cycling are being altered Global Environmental Change considers alterations to the biogeochemical cycles of carbon nitrogen sulphur and other elements as a result of industrial technological development and agriculture which have significantly altered the natural environment The book adopts a temporal and spatial approach to environmental change beginning with the natural environmental change of the Quaternary period and continuing with the culturally induced change since the inception of agriculture 10 000 years ago

Sustaining Liberal Democracy M. Wissenburg,J. Barry,2001-04-19 Assuming that

liberalism liberal democracy and the free market are here to stay this book asks how sustainability can be interpreted in ways that respect liberal democratic values and institutions Among the problems addressed are the compatibility of liberal proceduralism with substantive green ideals the existence and potential of eco friendly principles and ideas in classical liberal political theory the role of rights and duties and of democracy and deliberation and the greening potential of modern environmental focused practices in liberal democracies

Is the End Nigh? Graham Lyons, Evonne Moore, Joseph Wayne Smith, 1995 This work examines the environmental crisis within the context of the internationalization or globalization of people and nations The existence of life on Earth and certainly human life has been called into question in the twentieth century first through the threat of nuclear obliteration and climate alteration the enhanced greenhouse effect and destruction of the Earth's ozone shield environmental pollution exploding human population growth and the destruction of species and genetic diversity Many people believe that these global dangers represent a crisis of such a magnitude that they can only be effectively dealt with by a global response in particular by the abandonment of the sovereignty of nations and the construction of a one world government in some shape or form This new world order would also save us from ourselves bringing about an era of sustainable peace on Earth It is argued here that this internationalist vision cannot succeed it will destroy the environment not preserve it and bring about an era of turmoil and warfare not peace In particular it is demonstrated that the environmental crisis is in part a product of internationalism This book examines the deleterious consequences of internationalism with respect to major environmental and political debates such as ecologically sustainable development technology and human freedom economic rationalism and economic internationalism immigration and human population expansion racial and ethnic conflict and the globalization of epidemic diseases

Ethics of the Global Environment Robin Attfield, 2015-02-12 This fully updated and expanded textbook looks at issues including climate change sustainable development and biodiversity preservation and sensitively addresses global developments such as the Summits at Durban on climate and at Nagoya on biodiversity

Wonder, Value and God Robin Attfield, 2016-07-15 This book relates the value present in the natural world and in human creativity to an underlying purpose which it traces in creation It opens by invoking the wonder aroused by nature's value and celebrated by poets and moves to a cosmic purpose as the best explanation of this value Natural evils are considered and set in their evolutionary context Human creativity is later related to inspiration and to traditional theistic teaching about the purpose of human life Criticisms of the value approach are considered together with the quest for meaning and fears that Darwinism undermines it which are found to be illusory New ground is broken through this response to the spectre of bleakness The author's previous studies of meaningful work are applied to the question of the nature of a worthwhile life and life's meaning While the world's value is argued to point to creation by a transcendent lover of value human beings are shown to be capable of augmenting that value through their creativity not least through activities such as craftsmanship and gardening In integrating the themes of value creativity and

purpose the book contributes a new synthesis to the literature of philosophy environmental studies and theology

Multicriteria Analysis for Land-Use Management E. Beinat, Peter Nijkamp, 2012-12-06 The idea of this book started at approximately 33 000 feet somewhere above the Alps On our way to a workshop in Venice we had the opportunity of appreciating the different types of landscapes and the complex patchwork of urban areas agriculture forests rivers and lakes that can be seen from an aircraft The complexity of this puzzle and the complex task of managing its evolution became the topic of conversation for the rest of the flight It also became the topic of this book Land use management and multicriteria analysis offer countless opportunities for mutual reinforcement These two fields have developed largely independently but a trend towards the exploration of their synergies is now emerging This is clear from the recent literature on land use management spatial analysis and spatial planning which increasingly includes references to multicriteria methodologies and decision analysis At the same time a growing share of multicriteria applications now focus on environmental and land use issues This book includes contributions from authors coming from a variety of disciplines and backgrounds All together they highlight current issues in multicriteria analysis and land use management from theoretical methodological and practical perspectives Reframing International Development

Nelson W. Keith, 1997-09-04 Attempts to theorize contemporary globalization rarely stray beyond variations on old themes of superordination versus subordination Yet there are many new definers of our present global reality depletion of strategic resources degradation of our environment counter offensives against modern patterns of thought and action which suggest that a new framework of global relations is needed Nelson Keith challenges the presumptions upon which Western notions of the world have rested and sounds a call to forge a world order more sensitive to all of its representative voices **Politics and the Environment** James Connelly, Graham

Smith, 2003 This textbook is at the forefront of its field and is an invaluable resource for undergraduates studying politics and environment studies The most comprehensive book on the subject this new edition has been expanded and revised A

Companion to Environmental Philosophy Dale Jamieson, 2008-04-15 A Companion to Environmental Philosophy is a pioneering work in the burgeoning field of environmental philosophy This ground breaking volume contains thirty six original articles exemplifying the rich diversity of scholarship in this field Contains thirty six original articles written by international scholars Traces the roots of environmental philosophy through the exploration of cultural traditions from around the world Brings environmental philosophy into conversation with other fields and disciplines such as literature economics ecology and law Discusses environmental problems that stimulate current debates Ecologists and Ethical Judgements N.

Cooper, R.C.J. Carling, 2012-12-06 How we see the world our attitudes and assumptions about it profoundly affects the way we deal with it This book is written by an interdisciplinary team of ecologists nature conservationists and environmental philosophers It seeks to make the connection between the theoretical approaches to the valuation of the natural world and how these work in practice *Christianity and Science* John C. Weaver, John David Weaver, 2010 The SCM Core Text

Christianity and Science explores possible dialogues between Christianity and Science in an accessible and student friendly way Beginning with explorations of how we understand science and interpret the Bible the text moves on to discuss five key areas in which science and theology are engaged in a search for understanding cosmology and the origin of the universe the natural world and the evolution of life the mind brain and the nature of personhood the genetic modification and manipulation of plant animal and human life and the environmental crisis which faces the whole world The conclusion of the book seeks to explore how our understanding of God and God's activity in the world has developed and been shaped by the dialogue that has been explored in the previous chapters This final chapter includes a discussion of the problems raised for Christian belief by suffering and natural evil The author thus ventures in a bold way to integrate science and faith while not ignoring the difference between them

Regional Culture and Economic Development Ullrich Kockel, 2017-07-05 From an interdisciplinary perspective based primarily on European ethnology and political economy this book explores issues and concepts concerning the link between culture and economy A historical introduction to key theoretical problems is followed by five empirical chapters discussing aspects of development in rural as well as urban locations The author considers local leadership looking in particular at part time farming counter urban migration and pluriactivity The classification of informal economy is illustrated with examples drawn from fieldwork and urban poverty and migration are each explored in detail A discussion of heritage and identity as a resource for development questions whether the concern with the authenticity of culture's may be an inappropriate approach to take The book concludes with a theoretical reflection on the problematic of culture and economy and a call for a return to the roots of European ethnology as an essentially political science

Beyond Economics Gary Sauer-Thompson, Joseph Wayne Smith, 1996 This work summarizes an already comprehensive field of criticisms of received economics and advanced new ones particularly with respect to free trade and the industrialisation of economic systems If global economic and ecological catastrophe is to be avoided nations and communities must move towards greater self reliance within the framework of a much less resource wasteful existence But to do this will require not merely a cosmetic change in the present socio economic system but a change of such magnitude that it dwarfs previous social transformations in human history This great transformation must occur by conscious human activity and it must occur quickly if human civilizations and indeed human life itself is to continue

Ethics of Nature Angelika Krebs, 1999 Is nature's value only instrumental value for human beings or does nature also have intrinsic value Can traditional anthropocentrism be defended or must we move to a new physiocentric moral position This study develops a critical taxonomy or map of thirteen arguments for the conservation of nature It defends the moral intrinsic value of sentient animals but not of nonsentient nature The arguments are phrased in a simple plastic and concise language

Ecology and Theology in the Ancient World Ailsa Hunt, Hilary F. Marlow, 2019-03-21 This multi disciplinary volume brings together the voices of biblical scholars classicists philosophers theologians and political theorists to explore how ecology and theology intersected in

ancient thinking both pagan Jewish and Christian Ecological awareness is by no means purely a modern phenomenon Of course melting icecaps and plastic bag charges were of no concern in antiquity frequently what made examining your relationship with the natural world urgent was the light this shed on human relationships with the divine For in the ancient world to think about ecology was also to think about theology This ancient eco theological thinking whilst in many ways worlds apart from our own environmental concerns has also had a surprisingly rich impact on modern responses to our ecological crisis As such the voices gathered in this volume also reflect on whether and how these ancient ideas could inform modern responses to our environment and its pressing challenges Through multi disciplinary conversation this volume offers a new and dynamic exploration of the intersection of ecology and theology in ancient thinking and its living legacy

Spinoza and Deep Ecology Ecce de Jonge, 2017-03-02 Spinoza and Deep Ecology explores the philosophical psychological and political assumptions that underpin a concern for nature offering specific suggestions how the domination of humans and nature may be overcome It is primarily intended as an introduction to the philosophy of ecology known as deep ecology and to the way Spinoza's philosophy has been put to this aim Only a self realisation along the lines of Spinoza's philosophy can afford a philosophy of care which is inclusive of humans and the non human world which recognises the need for civil laws and democratic politics for human flourishing In stark contrast to texts written by or on behalf of deep ecologists Spinoza and Deep Ecology is not afraid of criticising existing versions of deep ecology which fail to accept that human concerns are integral to environmental issues
