Environmental Policy International Trade And Factor Markets:

Environmental Policy, International Trade and Factor Markets Chi-Chur Chao, E. Siu-Hung Yu, 2004-12-08 This book examines the complex relationship among trade and investment policies as well as environmental regulations especially for developing economies The impacts of pollution taxes and environmental standards on employment and social welfare the design and coordination of optimal trade and investment and environmental policies are analyzed International Trade, Factor Movements, and the Environment Michael Rauscher, 1997 Trade and the environment has become a major area of international political dispute This study investigates the interdependencies between environmental policies and international trade policies Does liberalization of international goods and factor markets cause environmental disruption and welfare losses Will countries institute lax ecological regulations to favour their domestic producers Should trade restrictions be used for environmental reasons and can environmental policy instruments be used to achieve trade related objectives Should there be what the author terms a green GATT The approach is mainly theoretical and uses traditional trade models like Heckscher Ohlin as well as non competitive models of the new trade theory and public choice Some other important but often neglected aspects such as trade in hazardous wastes and the foreign debt problem with the possibility of debt for nature swaps are also considered Finally International Trade Factor Movements and the Environment addresses institutional issues on both national and international levels The book will be essential reading for all international and environmental economists Import Tariffs as Environmental Policy Instruments C. Kraus, 2013-06-29 The theoretical claims for eco tariffs are rigorously analyzed within a unified framework formed of an international trade model enriched with both a domestic and a global externality During the course of the analysis the model is modified to analyze an array of contexts for which eco tariffs have been claimed to improve environmental quality or welfare The circumstances and conditions are characterised under which such tariffs can be shown to improve environmental quality and social welfare taking account of general equilibrium effects The theoretical results are applied in a policy analysis of eco tariffs and other trade instruments in the context of domestic and global environmental policy in order to assess the relevance of the eco tariffs that have been subjected to the theoretical analysis Finally the GATT WTO rules and regulations are presented since to date these have banned the use of eco tariffs The rules and regulations are mapped against the theoretical results to show which rules ought to be changed **Environmental Policy in an International Perspective** Laura Marsiliani, Michael Rauscher, Cees Withagen, 2013-06-29 The volume contains papers presented at a conference On the International Dimension of Environmental Policy It deals with two issues international environmental agreements environmental policies in open economies Both issues are hot topics The debate on how to cope with global climate change has become increasingly heated and controversial and the relationship between trade and the environment is on the WTO agenda The book contains review papers in which leading scholars in the field summarise the state of the art and original research extending the state of the

art Most of the papers are theoretically oriented but some papers also present empirical results using new econometric methods and new data The book contains material for those students of economics and researchers who wish to deepen their knowledge in the area of International Environmental Economics but also for those who endeavour to break new ground in this important field of research *Climate Change Policy and Global Trade* Christoph Böhringer, Andreas Löschel, 2012-12-06 This book synthesises several studies on the potential global impacts of two fundamental international policy initiatives i multilateral agreements on climate protection strategies and ii trade agreements towards global trade liberalisation Although these initiatives are not directly linked they interrelate in subtle yet important ways Based on theoretical analyses and numerical simulations the book provides guidelines on efficient strategies for climate change mitigation implementing the framework of the Kyoto Protocol and the provided flexibility instruments hereby accounting for interrelationships with existing and possible trade agreements on various levels The analyses incorporate important real world features such as imperfect market structures trade liberalisation settings risk or transaction costs that may substantially influence the magnitude and even the sign of policy impacts International Trade and the Environment Judith M. Dean, 2017-10-23 This title was first published in 2002 The interrelationship between international trade and the environment has become the subject of much heated debate These complex and strong concerns are given voice in this comprehensive and accessible text that brings together the leading journal articles dealing with the fundamental questions about this most important international problem International Trade and the Environment offers an invaluable source of contemporary international research for all those researching studying or practicing across the fields of international trade environmental economics applied microeconomics and other related areas *International Trade Policies and Climate Change Governance* P.K. Regionalism versus Multilateral Trade Arrangements Takatoshi Ito, Anne O. Krueger, 2007-12-01 There is no doubt that the open multilateral trading system after World War II was a key ingredient in the rapid economic development of the entire world Especially in Hong Kong Korea Singapore and Taiwan exports increased dramatically both in absolute terms and as a percentage of GNP In the 1980s however preferential trading arrangements PTAs began to emerge as significant factors affecting world trade This volume contains thirteen papers that analyze the tensions between multilateral trading systems and preferential trade arrangements and the impact of these tensions on East Asia The first four chapters introduce PTAs conceptually and focus on the unique political issues that these agreements involve The next five essays present more direct empirical analyses of existing PTAs and their economic effects primarily in East Asia The last four papers concentrate on the outcomes of individual East Asian nations trading policies in specific instances of preferential agreements

Empirical Modeling of the Economy and the Environment Christoph Böhlinger, Andreas Löschel, 2012-12-06 ZhongXiang Zhang East West Center Honolulu uses a global model based on marginal abatement cost curves for 12 world regions to estimate the contributions of the three flexibility mechanisms under the Kyoto Protocol i e emissions trading joint implementation and the clean development mechanism He shows how the

reduction in compliance costs of industrialized regions depends on the extent to which the flexibility mechanisms will be available. Not surprisingly, the fewer the restrictions on the use of flexibility mechanisms, the greater the gains from their use. These gains are unevenly distributed, however, with industrialized regions that have the highest autarkic marginal abatement costs tending to benefit the most. Restrictions on the use of flexibility mechanisms not only reduce the potential of the industrialized regions' efficiency gains but are also not beneficial to developing countries since they restrict the total financial flows to developing countries under the clean development mechanism. Christoph Bohringer (ZEW Mannheim), Glenn W. Harrison (University of South Carolina Columbia) and Thomas F. Rutherford (University of Colorado Boulder) evaluate the welfare implications of alternative ways in which the EU could distribute its aggregate emission reduction commitment under the Kyoto Protocol across member states. Using a large scale CGE model, they compare a uniform proportional cutback in emissions and the actual EU burden sharing agreement with an equitable allocation scheme derived from an endogenous burden sharing calculation. The latter equalizes the relative welfare cost across member states.

IMF-ENV Jean Chateau, Hugo Rojas-Romagosa, Sneha D

Thube, Dominique van der Mensbrugghe, 2025-04-11. IMF ENV is a global dynamic computable general equilibrium CGE model developed by the IMF's Research Department. The model features a database of 160 countries and regions along with 76 sectors and can be calibrated to a wide range of country-sector combinations. The model's general equilibrium structure combined with its high level of detail enables it to assess both direct and indirect domestic structural changes and cross-border spillover effects of policies. This makes it suitable for examining the medium and long-term macroeconomic effects as well as structural shifts arising from national and/or global climate mitigation, energy, fiscal, and trade policies. The model reports impact on macroeconomic variables, sectoral outcomes, employment, and bilateral trade flows along with detailed

information for energy demand and supply electricity generation and GHG emissions *Trade and the Environment* Savas S. Alpay, 2012-12-06 As the demand for environmental quality is increasing and as the current GATT rules monitored by the WTO are not very suitable for environmental protection either a new international environmental organization may be formed soon or new environmental regulations may be added to GATT In either case understanding of the interactions between trade and the environment will be vital Trade and the Environment presents both the theoretical and empirical exposition of i the impact of trade liberalization on environmental quality ii the impact of environmental regulations on international competitiveness and iii strategic trade and environmental policies An important feature of Trade and the Environment as compared to earlier books is that it brings together the reciprocal interactions between trade and the environment It can be used as the main or complementary textbook for a course on trade and the environment **Trade, Global Policy, and the Environment**

Per Fredriksson, 1999-01-01 QUOTE We live in an increasingly interconnected world Trade flows worldwide are growing rapidly and global production patterns are shifting as countries follow their comparative advantage in production via trade At the same time however there is growing concern about potential adverse environmental impacts from increasing trade QUOTE John A Dixon Lead Economist The Environment Department World Bank Interest in the trade and environment debate has intensified as a result of international trade agreements and because many proposed solutions to the climate change problem have potential implications for the global trading system Clearly more empirical work is needed to inform the debate guide policymakers toward solutions and help set priorities This volume is an attempt to further our understanding of the empirical links between trade and the environment Thirteen chapters which were presented as papers at a World Bank conference in April 1998 focus on three main themes 1 Effects of trade liberalization and growth on the environment 2 The QUOTE pollution haven QUOTE hypothesis 3 Economic instruments for resolving global environmental problems The papers address a number of different issues within each of the themes offering new data or new questions and approaches They are devoted to deepening our understanding and empirical knowledge of the various effects of trade liberalization Only through a firm understanding of the linkages involved can well founded policy advice be formulated
