Environmental Reconstruction In Headwater Areas:

Environmental Reconstruction in Headwater Areas Martin F. Bach, Josef Krecek, 2000-05-31 These proceedings of a NATO Advanced Research Workshop on Environmental Reconstruction in Headwater Areas provide a landmark in the evolution of a distinctive movement perhaps an emerging new philosophy within the practice of headwater management The Headwater Control movement traces its history back to the First International Conference on Headwater Control Prague 1989 Throughout this brief history Headwater Control has remained a typical environment movement ad hoc At its meetings for every convert to the multidisciplinary integrative practical interventionist and above all green ideals of the group there have been several delegates who have found the whole concept both new and slightly incomprehensible One reason for this has been the Headwater Control practice of trying to bring together scientists practitioners policy makers and non government environmentalist organisations The group's larger meetings have always been federal gatherings Sponsorship has been shared with invited participation from associations representing hydrological science soil conservation erosion control forestry environmental activism and so forth These delegations may have included fellow travellers in the work to protect headwater environments but their main concerns have not necessarily coincided with the Headwater Control group's prescriptions for the environmental regeneration of headwater regions The Liberec Workshop whose proceedings are distilled into this volume provided a first opportunity for the scattered supporters of Headwater Control to talk among themselves and find out to what degree there really is a shared vision of the way forward in headwater management restoration and protection

Environmental Role of Wetlands in Headwaters Josef Krecek, Martin Haigh, 2006-05-28 Internationally the wetlands of headwater and upland regions provide many valuable environmental services This book moves towards a more comprehensive inventory of the benefits and costs of headwater wetlands It evaluates the research that tries to understand the tolerances exchanges checks and balances within headwater landscapes and the downstream impacts of changes in wetlands It employs case studies and reviews from 21 nations spanning Europe Africa Asia and the Americas It explores the new policy frameworks changes in land husbandry new systems for community education participatory processes and technological interventions required for the effective management of headwater wetlands and the full integration of wetlands including newly constructed wetlands into environmental management and planning In the past most research dealt with wetlands as isolated features this book examines wetlands in their watershed management context

Management of Mountain Watersheds Josef Krecek, Martin Haigh, Thomas Hofer, Eero Kubin, 2012-04-24 The book

aims to address the interdisciplinary targets of watershed management in mountain regions based on the current knowledge of the subject. The focus of the book is particularly on monitoring research and modelling the interactions between the climate water cycle and aquatic ecosystem. The issues of watershed management in mountain regions in different parts of Europe, Africa, America, and Asia have been the central theme of the book, which is basically divided into five sections: Institutional aspects in control of mountain regions; Stream flow processes in mountain catchments; Water chemistry and biota in mountain streams and lakes; Effects of forest practices and climate change on hydrological phenomena; and Soil conservation and control of floods and landslides. The contributions have been peer reviewed, and the interdisciplinary team of authors includes experts from the specialised areas of geography, hydrology, chemistry, biology, forestry, ecology, economy, and sociology. The practical applications and management strategies mentioned in the book deal with the integrated resource management approach based on the compromise between the development, conservation, and protection of the nature. Finally, the socio-economic and cultural aspects and ecosystem prevalent in a mountain catchment are discussed in detail.

From Headwaters to the Ocean Makoto Taniguchi, William C. Burnett, Yoshihiro Fukushima, Martin Haigh, Yu Umezawa, 2008-09-11

The vulnerability of water resources due to climate change and human activities is globally increasing. The phenomenon of hydrological change is complicated because of the combinations and interactions between natural climate fluctuation, global warming, and human activities including changes in land utilization. The impact areas of hydrological change are

Integrated Watershed Management E. Beheim, G.S. Rajwar, M. Haigh, J. Krecek, 2012-03-05

Headwaters are fragile environments threatened by anthropogenic actions. The regeneration of headwaters calls for a practical approach through integrated environmental management. This book discusses various issues concerning headwater regions of the world under wide-ranging themes: climate change impacts, vegetal cover, sub-surface hydrology, catchment and streamflow hydrology, pollution, water quality, and limnology, remote sensing, and GIS, environmental impact assessment and mitigation, socio-economic impacts, public participation, education, and management, and integrated watershed management. This book aims to bring about an awareness in sustainable regeneration of headwater regions and particularly highlighting the problems of environmental management in highlands and headwaters. These regions consist of great reserves of natural resources which need to be exploited and managed sustainably.

The Role of Natural and Constructed Wetlands in Nutrient Cycling and Retention on the Landscape Jan Vymazal, 2014-09-26

Natural and constructed wetlands play a very important role on the landscape, and their ecological services are highly valuable. In fact, some wetland types are regarded as one of the most valuable ecosystems on the Earth. Water management including flood water retention, biomass production, carbon sequestration, wastewater treatment, and biodiversity sources are among the most important ecological services of wetlands. The book is aimed at the use of constructed wetlands for wastewater treatment and for the evaluation of various ecosystem services of natural wetlands. Special attention is paid to the role and potential use of wetlands on the agricultural landscape.

The book presents up to date results of ongoing research and the content of the book could be used by wetland scientists researchers engineers designers regulators decision makers universities teachers landscape engineers and landscape planners as well as by water authorities water regulatory offices or wastewater treatment research institutions **Alpine Waters** Ulrich Bundi,2010-02-04 Most of the world s mountains are rich in water and as such play a pivotal role in the global water cycle They provide water for diverse human uses and ecosystems Growing water demands as well as climate change will lead to ever increasing pressure on mountain waters Overcoming water use conflicts and maintaining the ecological functioning of mountain waters presents a highly challenging task and is indispensable for sustainable development This book extensively portrays the highly diverse attributes of mountain waters and demonstrates their paramount importance for ecological and societal development The extensive summaries on the scientific basics of mountain waters are supplemented with considerations on the diverse water uses needs for management actions and challenges regarding sustainable water management This overview concerns not only the mountain areas themselves but also downriver reaches and their surrounding lowlands and therefore the relationship between mountain and lowland water issues Living On The Edge Jonathan Burke,2014-01-26 This book addresses common doubts and concerns Christians have concerning God and the Bible including claims from the New Atheism disputes over Bible archaeology questions about the historical accuracy of the Bible questions about the original texts of the Old and New Testament questions about what the Bible really teaches concerning topics such as baptism heaven and hell satan and demons questions about the value and relevance of the Bible s moral and ethical teachings **Sustainable Management of Headwater Resources** Libor Jansky,Martin J. Haigh,Haushila Prasad,2005 Headwaters are the source of freshwater resources the margins of drainage basins and the first and zero order basins that surround every catchment The challenge is to define appropriate self sustainable management strategies and structures for these lands which meet the needs of the headwater habitat including its human inhabitants and the needs of habitats downstream The contributors to this book strive to anticipate emerging and future problems to discover integrated solutions to the problems already caused by land degradation natural hazards and development processes and to help develop better land management environmental protection and landscape regeneration practices and policies They also address the many challenges that remain the concern for effective sharing of local experience in science and technology community participation the role of education effectiveness and limits of current technology the selection of appropriate policies and goals modes of effective management and the sustainability of current activities Sustainable Management of Headwater Resources provides an understanding of current and prior situations and provides scientific analyses of local and regional headwater issues in India and Africa The authors analyse the current situation through field experiments that provide reliable information on the status of headwater resources in these regions This book originates from the conference on Sustainable Management of Headwater Resources at the 5th International Conference on Headwaters in Nairobi Kenya

Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth Laith A. Jawad, 2021-09-12 The system of the Tigris Euphrates Rivers is one of the great river systems of southwestern Asia It comprises the Tigris and Euphrates Rivers which follow roughly parallel courses through the heart of the Middle East The lower portion of the region that they run through is known as Mesopotamia was one of the cradles of civilisation There are several environmental factors that govern the nature of the two rivers and shape the landscape the two rivers running through Geological events create rivers climate monitor the water supply the surrounding land influences the vegetation and the physical and chemical features of water The Tigris Euphrates system runs through the territory of four countries Iraq Iran Turkey and Syria Therefore any scientific approach to the environment of these two rivers should include the natural history events in these countries The book Tigris and Euphrates Rivers Their Environment from Headwaters to Mouth will be divided into nine parts These parts deal with the issues of the environment the status of the flora and fauna the abiotic aspects ecology hydrological regime of the two rivers the biotic aspects Water resources stress of the environment conservation issues Since the book of Julian Rzoska Euphrates and Tigris Mesopotamian Ecology and Destiny in 1980 no book or major reference has been published that includes between its cover the facts and information that the present book will present Therefore the importance of the present book falls in stating the present status of the environment of the two rivers and the comparison of their environment between now and that of 37 years ago as given by J Rzoska 1980 The recent studies showed that there are a large number of natural and political events that happened within the last three decades in the area of the Tigris Euphrates river system that for sure have done a great change to the environment of the two rivers and consequently changing the biological and non biological resources of the two rivers This book will be a reference book to both Academic and students across the Middle East in different disciplines of knowledge to use in their researches on Tigris Euphrates river system The scholars interested in this area will use this book as a guide to compare this freshwater system with other areas in Asia and the world *Preparing for the Next Generation of Watershed Management Programmes and Projects, Europe* Moujahed Achouri, 2005 The Soils of Nepal Roshan Babu Ojha, Dinesh Panday, 2021-10-14 This book publishes consolidated information on the soils of Nepal from all possible sources The Survey Department Government of Nepal conducted two national scale soil survey projects to classify soils of Nepal Land Resource Mapping Project ended in 1985 and National Land Use Planning Project ended in 2021 Both projects adopted the United States Department of Agriculture system of soil classification Besides National Soil Science Research Center previously known as Soil Science Division of Nepal Agricultural Research Council and Soil Management Directorate Department of Agriculture also worked on soils of Nepal To date the information on the soils of Nepal is not published in well documented form but has been reported widely as gray literature project report or government report or peer review articles The Soils of Nepal is a part of World Soils Book Series which constitutes twelve chapters covering broad aspects such as soil research history climate geology soil classification and mapping and soil fertility Furthermore

information about soil properties and relation between soil constituents of the dominant soil types of Nepal and their scope of use in the context of land use are described This book also tries to simplify the intricate relationship among soil culture and people Each chapter contains a comprehensive richly illustrated and up to date overview of the soils of Nepal We believe it fulfils a quest for a global audience including students educators extension workers and soil scientists who are interested to know the young soils of Nepal

Miriam Jones,Lesleigh Anderson,Dorothy M. Peteet,2020-01-13 The vast area of the North Pacific spanning 55 longitude represents a challenge for documenting and understanding the geologic history of ocean atmosphere and terrestrial environmental change Nevertheless its importance for many issues including our fundamental understanding of ocean and atmospheric circulation patterns and teleconnections with natural modes of climate variability through time has led to a steady rise in the numbers of study sites and proxy types By bringing together a wide range of proxies and timescales that examine the impacts of paleoclimate on ecosystems water carbon and humans and interactions between marine and terrestrial processes this Research Topic contributes to an improved understanding of the region s significance at global hemispheric and regional scales
