Handbook of Spatial Point-Pattern Analysis in Ecology Thorsten Wiegand,Kirk A. Moloney,2013-12-20

Understand How to Analyze and Interpret Information in Ecological Point Patterns Although numerous statistical methods for analyzing spatial point patterns have been available for several decades they haven t been extensively applied in an ecological context Addressing this gap Handbook of Spatial Point Pattern Analysis in Ecology shows how the techniques of point pattern analysis are useful for tackling ecological problems Within an ecological framework the book guides readers through a variety of methods for different data types and aids in the interpretation of the results obtained by point pattern analysis Ideal for empirical ecologists who want to avoid advanced theoretical literature the book covers statistical techniques for analyzing and interpreting the information contained in ecological patterns It presents methods used to extract information hidden in spatial point pattern data that may point to the underlying processes The authors focus

on point processes and null models that have proven their immediate utility for broad ecological applications such as cluster processes. Along with the techniques the handbook provides a comprehensive selection of real world examples. Most of the examples are analyzed using Programita, a continuously updated software package based on the authors' many years of teaching and collaborative research in ecological point pattern analysis. Programita is tailored to meet the needs of real world applications in ecology. The software and a manual are available online.

Introduction to Hierarchical Bayesian Modeling for Ecological Data Eric Parent, Etienne Rivot, 2012-08-21 Making statistical modeling and inference more accessible to ecologists and related scientists. *Introduction to Hierarchical Bayesian Modeling for Ecological Data* gives readers a flexible and effective framework to learn about complex ecological processes from various sources of data. It also helps readers get started on building their own statistical models. The text begins with simple models that progressively become more complex and realistic through explanatory covariates and intermediate hidden states variables. When fitting the models to data, the authors gradually present the concepts and techniques of the Bayesian paradigm from a practical point of view using real case studies. They emphasize how hierarchical Bayesian modeling supports multidimensional models involving complex interactions between parameters and latent variables. Data sets, exercises, and R and WinBUGS codes are available on the authors' website. This book shows how Bayesian statistical modeling provides an intuitive way to organize data, test ideas, investigate competing hypotheses, and assess degrees of confidence of predictions. It also illustrates how conditional reasoning can dismantle a complex reality into more understandable pieces. As conditional reasoning is intimately linked with Bayesian thinking, considering hierarchical models within the Bayesian setting offers a unified and coherent framework for modeling estimation and prediction.

Statistical Geoinformatics for Human Environment Interface Wayne L. Myers, Ganapati P. Patil, 2012-07-27 *Statistical Geoinformatics for Human Environment Interface* presents two paradigms for studying both space and interface with regard to human environment localization and multiple indicators. The first approach localizes thematic targets by treating space as a pattern of vicinities with the pattern being a square grid and the placement of vicinities.

Environmental and Ecological Statistics with R Song S. Qian, 2016-11-03 Emphasizing the inductive nature of statistical thinking, *Environmental and Ecological Statistics with R* Second Edition connects applied statistics to the environmental and ecological fields. Using examples from published works in the ecological and environmental literature, the book explains the approach to solving a statistical problem, covering model specification, parameter estimation, and model evaluation. It includes many examples to illustrate the statistical methods and presents R code for their implementation. The emphasis is on model interpretation and assessment, and using several core examples throughout the book, the author illustrates the iterative nature of statistical inference. The book starts with a description of commonly used statistical assumptions and exploratory data analysis tools for the verification of these assumptions. It then focuses on the process of building suitable statistical models, including linear and nonlinear models, classification, and regression trees, generalized

linear models and multilevel models It also discusses the use of simulation for model checking and provides tools for a critical assessment of the developed models The second edition also includes a complete critique of a threshold model Environmental and Ecological Statistics with R Second Edition focuses on statistical modeling and data analysis for environmental and ecological problems By guiding readers through the process of scientific problem solving and statistical model development it eases the transition from scientific hypothesis to statistical model Biometry for Forestry and Environmental Data Lauri Mehtatalo, Juha Lappi, 2020-05-27 Biometry for Forestry and Environmental Data with Examples in R focuses on statistical methods that are widely applicable in forestry and environmental sciences but it also includes material that is of wider interest Features Describes the theory and applications of selected statistical methods and illustrates their use and basic concepts through examples with forestry and environmental data in R Rigorous but easily accessible presentation of the linear nonlinear generalized linear and multivariate models and their mixed effects counterparts Chapters on tree size tree taper measurement errors and forest experiments are also included Necessary statistical theory about random variables estimation and prediction is included The wide applicability of the linear prediction theory is emphasized The hands on examples with implementations using R make it easier for non statisticians to understand the concepts and apply the methods with their own data Lot of additional material is available at www.biombook.org The book is aimed at students and researchers in forestry and environmental studies but it will also be of interest to statisticians and researchers in other fields as well
