Manahan, 2004-08-26 Environmental Chemistry Eighth Edition builds on the same organizational structure validated in previous editions to systematically develop the principles tools and techniques of environmental chemistry to provide students and professionals with a clear understanding of the science and its applications Revised and updated since the publication of the best selling Seventh Edition this text continues to emphasize the major concepts essential to the practice of environmental science technology and chemistry while introducing the newest innovations to the field The author provides clear explanations to important concepts such as the anthrosphere industrial ecosystems geochemistry aquatic chemistry and atmospheric chemistry including the study of ozone depleting chlorofluorocarbons The subject of industrial chemistry and energy resources is supported by pertinent topics in recycling and hazardous waste Several chapters review environmental biochemistry and toxicology and the final chapters describe analytical methods for measuring chemical and biological waste New features in this edition include enhanced coverage of chemical fate and transport industrial ecology particularly how it is integrated with green chemistry conservation principles and recent accomplishments in sustainable chemical science and technology a new chapter addressing terrorism and threats to the environment and the use of real world examples

Ecological Biochemistry Gerd-Joachim Krauss, Dietrich H. Nies, 2014-08-29 The first stand alone textbook for at least ten years on this increasingly hot topic in times of global climate change and sustainability in ecosystems Ecological biochemistry refers to the interaction of organisms with their abiotic environment and other organisms by chemical means Biotic and abiotic factors determine the biochemical flexibility of organisms which otherwise easily adapt to environmental changes by altering their metabolism Sessile plants in particular have evolved intricate biochemical response mechanisms to fit into a changing environment This book covers the chemistry behind these interactions bottom up from the atomic to the system s level An introductory part explains the physico chemical basis and biochemical roots of living cells leading to secondary metabolites as crucial bridges between organisms and the respective ecosystem The focus then shifts to the

biochemical interactions of plants fungi and bacteria within terrestrial and aquatic ecosystems with the aim of linking biochemical insights to ecological research also in human influenced habitats A section is devoted to methodology which allows network based analyses of molecular processes underlying systems phenomena A companion website offering an extended version of the introductory chapter on Basic Biochemical Roots is available at <http://www.wiley.com/go/KraussNiesEcologicalBiochemistry>

Biochemistry: Fundamentals and Bioenergetics Meera Yadav, Hardeo Singh Yadav, 2021-10-29 Biochemistry Fundamentals and Bioenergetics presents information about the basic and applied aspects of the chemistry of living organisms The textbook covers the scope and importance of biochemistry the latest physical techniques to determine biomolecular structure detailed classification structure and function of biomolecules such as carbohydrates lipids amino acids proteins nucleic acids vitamins enzymes and hormones Readers will also learn about processes central to energy metabolism including photosynthesis and respiration oxidative phosphorylation DNA replication transcription and translation recombinant DNA technology Key Features logical approach to biochemistry with several examples 10 organized chapters on biochemistry fundamentals and metabolism focus on biomolecules and biochemical processes references for further reading

Environmental Biochemistry James Fisher, 2019-08-23 Applying principles of Biochemistry for the protection of environment is the main concern of environmental biochemistry The main themes include managing water quality and air resources protection from radiation to maintain industrial hygiene etc Environmental biochemists employ living organism and their capabilities for such purposes The pace of change in environmental biochemistry has continued unabated since 1980 This text discusses the nature of these recent changes and developments without compromising its principal subject matter While compiling this book a serious view has been kept in mind that environmental biochemistry is essentially different from biochemistry Wherever necessary diagrams and structures of compounds have been used Biochemistry is a multidiscipline field that studies the chemistry of life processes These processes can be loosely divided into the following groups reactions that are anabolic build up molecules or catabolic break down molecules chemistry of regulatory pathways hormones and genes and the chemistry of cell structure At the cellular level the reactions include oxidation reduction reactions group transfer hydrolysis bond making and breaking reactions On the systemic level the reaction represent pathways and processes in living system that are important in the energy transfer biological information flow protein structures oxygen flow and catalysis of reactions These predefined reactions processes pathways and systems all function together enabling the living system to function normally This book attempts to understand the multiple branches that fall under the discipline of environmental biochemistry and how such concepts have practical applications It is compiled in such a manner that it will provide in depth knowledge about the theory and practice of the subject
