A Textbook of Environmental Chemistry

Abhilash E S,2023-12-29 The study of environmental chemistry entails the investigation of the impacts that chemicals have on the air water and soil as well as the ways in which these chemicals influence the health of humans and the environment Environmental chemists are consequently often the chemists who interact with the public the most since the research that they carry out contributes to the formation of judgements that have an impact on all humans Within the scope of this book biological resources or the ways in which they are connected to the physical and chemical features of the environment are investigated The regional as well as worldwide environmental concerns such as pollution of water air soil and noise as well as the kinds of pollution the sources of pollution and the impacts of pollution on the ecosystem have received the attention and focus that they deserve In addition to providing a more concentrated and individualized explanation of physical mathematical and modelling components that apply to environmental circumstances of concern this book offers a comprehensive and accessible study of phase partitioning and transformation processes It also offers straightforward modelling tools that can quantitatively characterize these processes and how they interact within a specific environmental system The textbook of environmental chemistry is designed to educate students and instructors of environmental sciences environmental chemistry and environmental studies at the graduate postgraduate polytechnic or engineering levels with an essential understanding of the concepts underlying the environment and its chemistry Additionally this book is helpful for students as well as lecturers who are studying general science

A Text Book of Environmental Chemistry and Pollution Control

Dr. Harendra K. Sharma,Dr. Jayashree B Tirpude,Dr. Yogita K Meshram,Dr. Priyadarshini P Chahande,2023-12-11 Contemporary science is not simple There are complex interrelationships between the various scientific disciplines that contribute to the comprehension of virtually every scientific issue and phenomenon Those Renaissance times when an individual could acquire a substantial amount of knowledge at their disposal are long since passed This is not attributable to a deficiency in individual capability but rather to the exponential growth of knowledge that is emblematic of our era Environmental Science and Environmental Chemistry in particular is utterly engrossed in this situation In the past environmental chemistry adopted a

reactive stance wherein issues were identified and remedied subsequent to their occurrence such as when a catastrophe occurred or when the consequences were readily apparent to the environment such as when vegetation and animals were killed air and water conditions depleted or visibility was lost or when the stratospheric ozone layer was depleted Thus virtually everything that occurs in the world could be classified as environmental chemistry

Homogeneous Catalysis with Metal Complexes Gheorghe Duca, 2012-06-15 The book about homogeneous catalysis with metal complexes deals with the description of the reductive oxidative metal complexes in a liquid phase in polar solvents mainly in water and less in nonpolar solvents The exceptional importance of the redox processes in chemical systems in the reactions occurring in living organisms the environmental processes atmosphere water soil and in industrial technologies especially in food processing industries is discussed The detailed practical aspects of the established regularities are explained for solving the specific practical tasks in various fields of industrial chemistry biochemistry medicine analytical chemistry and ecological chemistry The main scope of the book is the survey and systematization of the latest advances in homogeneous catalysis with metal complexes It gives an overview of the research results and practical experience accumulated by the author during the last decade

Mathematical Modeling for Environmental Management Sajib Mandal, Md Haider Ali Biswas, Md Sirajul Islam, 2025-01-16 This book investigates the potential impacts of global warming and rapid GHG emissions from artificial sources on coastal and marine ecosystems and introduces effective strategies to improve coastal and marine ecosystems by mitigating GHG emissions and concentrations Therefore this book develops four novel mathematical models to investigate the potential impacts on coastal and marine ecosystems and two novel optimal control problems to mitigate the potential impacts and improve coastal and marine ecosystems by reducing GHG emissions and concentrations All models are extensively validated by theoretical analysis and numerical simulations The main objective of this book is to be aware of the adverse effects of rapid GHG emissions and global warming on the environment and all life on earth to reveal how to maintain a healthy environment for all life and to save our beautiful planet from ecological deserts The book discloses applications of mathematical modeling for environmental management in environmental science and applied mathematics It provides new concepts and methods for scientists who study and develop mathematical modeling and environmental science and researchers who apply them to solve real life problems
