Medicine,2010-10-01 From the origin of the leak to the amount of oil released into the environment to the spill s duration the 2010 Gulf of Mexico oil spill poses unique challenges to human health The risks associated with extensive prolonged use of dispersants with oil fumes and with particulate matter from controlled burns are also uncertain There have been concerns about the extent to which hazards such as physical and chemical exposures and social and economic disruptions will impact the overall health of people who live and work near the area of the oil spill Although studies of previous oil spills provide some basis for identifying and mitigating the human health effects of these exposures the existing data are insufficient to fully understand and predict the overall impact of hazards from the Deepwater Horizon oil spill on the health of workers volunteers residents visitors and special populations Assessing the Effects of the Gulf of Mexico Oil Spill on Human Health identifies populations at increased risks for adverse health effects and explores effective communication strategies to convey

health information to these at risk populations The book also discusses the need for appropriate surveillance systems to monitor the spill s potential short and long term health effects on affected communities and individuals Assessing the Effects of the Gulf of Mexico Oil Spill on Human Health is a useful resource that can help policy makers public health officials academics community advocates scientists and members of the public collaborate to create a monitoring and surveillance system that results in actionable information and that identifies emerging health risks in specific populations **Library of Congress Subject Headings** Library of Congress, **Environmental Hazards in the Arabian Gulf Region** Abd el-aziz Khairy Abd el-aal,Abdullah Al-Enezi,Qusaie E. Karam,2024-12-03 This book discusses the environmental hazards in the Gulf countries GCC The publication of this book is of great importance to all those interested and knowledgeable in the field Climate change leads to the occurrence of major environmental hazards that must be reduced by estimating the extent of climate change and developing appropriate solutions to mitigate those effects Climate changes are produced indirectly as a result of human activities with uncalculated consequences The process of climate change is always accompanied by catastrophic environmental problems such as global warming high temperatures storms hurricanes floods desertification processes air pollution and the extinction of many types and forms of animals and plants The Gulf countries are located in the eastern part of the Arabian Peninsula where the crude oil is extracted in several fields The states suffer from many environmental problems as a result of its geographical location global climate change and also from oil extraction operations The problems include high temperatures induced earthquakes and pollution in the soil and marine coast as well as desertification processes sand dunes movement and other environmental problems Earthquakes are also recorded from and near the oil fields indicating the link between the oil extraction process and the occurrence of earthquakes Indeed the environmental studies published in the Gulf state are very few and do not meet the need of the scientific community in region which need more important environmental publications that help in the great and rapid urban developments in the area
