Thompson, 2016-10-25 We live during a crucial period of human history on Earth. Anthropogenic environmental changes are occurring on global scales at unprecedented rates. Despite a long history of environmental intervention, never before has the collective impact of human behaviors threatened all of the major bio systems on the planet. Decisions we make today will have significant consequences for the basic conditions of all life into the indefinite future. What should we do? How should we behave? In what ways ought we to organize and respond? The future of the world as we know it depends on our actions today. A cutting edge introduction to environmental ethics in a time of dramatic global environmental change, this collection contains forty-five newly commissioned articles with contributions from well-established experts and emerging voices in the field. Chapters are arranged in topical sections: social contexts, history, science, economics, law, and the Anthropocene; who or what is of value; humanity, conscious animals, living individuals, and wild nature; the nature of value, truth, and goodness; practical reasons, hermeneutics, phenomenology, and aesthetics; how things ought to matter; consequences, duty, and obligation; character traits, caring for others, and the sacred; essential concepts: responsibility, justice, gender rights, ecological space, risk, and precaution; citizenship, future generations, and sustainability; key issues: pollution, population, energy, food, water, mass extinction, technology, and ecosystem management; climate change, mitigation, adaptation, diplomacy, and geoengineering; and social change, conflict, pragmatism, sacrifice, and action. Each chapter explains the role played by central theories, ideas, issues, and concepts in contemporary environmental ethics and their relevance for the challenges of the future. Environmental Ethics Marion Hourdequin, 2024-01-25 What is environmental virtue? Is developing good habits enough? What does climate justice require? Is ecological restoration just another form of the human domination of nature? Exploring these questions and more, this book provides an up-to-date and balanced introduction to environmental ethics. It first examines ethical theory, then ties theory to practice, showing how values guide environmental policies, but also how policies and institutions shape environmental values. Updated and expanded to engage with the latest scholarship, scientific findings, and societal challenges, this 2nd edition features new sections on food ethics, multispecies justice, intergenerational ethics, and the Anthropocene. Contemporary case studies focusing on the rights of nature, the use of biotechnology in ecological restoration, and just climate transitions. Expanded coverage of diverse philosophical traditions, including Confucian, Daoist, and Indigenous ethical perspectives. Updated discussion questions, further reading sections, and online resources. Exploring the possibilities and limitations inherent in both classical ethical models and modern theoretical approaches to the environment, this is a key resource for teaching students to think ethically about the world we live in. *Environmental Ethics* Holmes Rolston, 1988 *Environmental Ethics* is a systematic account of values carried by the natural world, coupled with an inquiry into duties toward animals, plants, species, and ecosystems. A comprehensive philosophy of nature is illustrated by and integrated with numerous actual examples of ethical decisions made in encounters with fauna and flora, endangered species, and threatened ecosystems. The ethics developed is informed throughout by ecological science and evolutionary biology, with attention to the

logic of moving from what is in nature to what ought to be The ethical theory is applied in detail to social public and business policy Written in an engaging style using diagrams and figures as well as numerous case studies Environmental Ethics prods the reader into concrete application and invites reader participation in the ethical discussions The ethics concludes by exploring the historical experiences of personal residence in a surrounding environment Here is an adventure into what it means to live as responsible human beings in the community of life on Earth In the series Ethics and Action edited by Tom Regan

Environmental Ethics and Policy-Making Mikael Stenmark, 2017-03-02 Environmental issues raise crucial questions What should we value What is our place in nature What kind of life should we live How should we interact with other living things Environmental management and policy making is ultimately based on answers to these and similar questions but do we need a new ethics to be able overcome the environmental crisis we face This book addresses these important questions and explores the values that decision makers often presuppose in their environmental policy making Examining the content of the ethics of sustainable development that the UN and the world's governments want us to embrace this book examines alternatives to this kind of ethics and the differences in basic values that these make in practice Offering a detailed analysis of the ethics that lie behind current policy making as it is expressed in documents such as Agenda 21 and the Rio Declaration this unique contribution to the field of environmental studies shows how different environmental ethical theories support different goals of environmental management and generate different policies when it comes to population growth agriculture and preservation and management of wilderness areas and endangered species Mikael Stenmark concludes that policy makers must take more seriously the value assumptions and conflicts connected to environmental issues and state explicitly on what values their own proposals and decisions are based and why these should be accepted Those studying environmental issues or environmental philosophy will find this accessible text invaluable in presenting a clear understanding of environmental ethics and contemporary applications and policies

For People and the Planet Don E. Marietta, 1995 The prevailing view of nature has begun to move away from a traditionally Western humans apart from nature attitude toward one that sees humans as a part of nature Don E Marietta describes these changes and what he perceives as a philosophical shift toward new holistic models of environmental ethics He supports a critical holism that stresses the moral importance of the interrelationship of human beings animals plants and non living things in their common dependence on the ecosphere Considering that this humanistic approach to ethics recognizes a shared responsibility to the whole system of nature Marietta explores the apparent conflict between environmental holism and the interests of individuals incorporating the perspectives of ecofeminism anthropocentrism contextualism and pluralism This approach produces an ecologically enlightened position that calls for a commitment to protecting planet Earth while recognizing that even though it may not be easy or simple we can live according to a humanistic and holistic ethic one which seeks the good for people and for the planet Author note Don E Marietta Jr is Adelaide R Snyder Distinguished Professor of Ethics and Professor of Philosophy at Florida Atlantic University
