Environmental External Costs Of Transport:

Environmental External Costs of Transport Peter Bickel, Rainer Friedrich, 2013-03-09 Transport is very important for the economy and our welfare. However, transport also causes a lot of problems including air pollution. Such problems should be taken into account when making decisions. A prerequisite for doing so is that the impacts are known quantitatively, measured and allocated to the different activities in transport. Furthermore, they should be transformed into monetary units to be used as a basis for cost-benefit analyses or as an aid for setting taxes and charges that reflect the external costs. This book describes a methodology for calculating impacts of transport activities and external costs caused by air pollution and presents numerous applications of this methodology for different transport technologies, locations and policy case studies. The approach has been developed and results have been calculated within the research project Externe Core Transport, financed to a large extent by the European Commission Directorate General Research. We would like to thank especially Pierre Vallette and Pekka Jarvilehto from the EC for their advice and support. A considerable number of experts with expertise in the different disciplines of this highly interdisciplinary work contributed to this book. The editors would like to thank the authors (see list on p. XV) for their contributions; it is especially remarkable that the authors helped to make this book an integrated whole instead of a number of independent contributions.

14th International Conference on Environmental Science and Development (ICESD2023) Gordon Huang, Yongping Li, Changping Chen, Peng Zhang, 2024-10-19 This book is proposed to be a collection of excellently peer-reviewed research from the 2023 14th International Conference on Environmental Science and Development ICESD 2023, which will be held during May 25-27, 2023, in Xiamen, China. ICESD 2023 will gather innovative academics and industrial experts to a common forum to facilitate the exchange of scientific information and its application in the field of Environmental Science and Sustainable Development. Particularly, a large amount of the research is related to the Water Governance Programme, which is an initiative as developed by the China International Center for Economic and Technical Exchanges, United Nations Development Programme, and Coca-Cola China. Recently, effects of energy crisis, water scarcity, environmental pollution, climate change, COVID-19 pandemic, and their interactions on the eco-environment and health have caused extraordinary risks in socio-economic and environmental systems. Such risks feature dynamic, uncertain, and interactive characteristics. In order to tackle these risks, cutting-edge technologies, including both experimental approaches and modeling ones, are desired urgently. Particularly, nature-based solutions will be developed to help achieve net-zero emission and United Nations Sustainable Development Goals. In addition, data-driven and AI-based methodologies will be developed to facilitate policy analysis of SEE under New Normal scenarios. Furthermore, the combinations of multiple

approaches are expected to support the enhancement of SEE resilience in a post pandemic future Consequently ICESD 2023 will include presentations in the field of Water Resources Management Wastewater Treatment Drinking Water Safety Energy and Environmental Systems Analysis Air Pollution Control Solid Waste Management Sustainable Development Ecosystem Restoration Climate Change Adaptation and Socio economic and Environmental Management Excellent papers related to these topics would be enclosed in this proposed book
