Collected Reprints ,1978 **The Oosterschelde Estuary (The Netherlands): a Case-Study of a Changing Ecosystem** P.H. Nienhuis,A.C. Smaal,2012-12-06 The Oosterschelde estuary is one of the estuaries in the Netherlands which remained after the Delta scheme was completed in 1986 In the seventies the Oosterschelde became a national symbol of the change in political thinking and decision making about the values of our natural environment As a result of political decision

a storm surge barrier was built in the mouth of the estuary as a compromise between safety for the human population and nature conservation. Owing to the broad interest in the meaning of the Oosterschelde estuary for Dutch and international societies it became one of the most intensively studied coastal ecosystems in Western Europe. In an interdisciplinary approach of several state agencies and universities a broad spectrum of physical, chemical and biological research has been carried out during the period of 1980-1989 dedicated to the structure and functioning of the saline ecosystem. The undisturbed estuary was studied during the period between 1980-1984. Large mathematical models had been constructed before 1986 to simulate future changes in the ecosystem. Further studies after the completion of the storm surge barrier 1986-1989 have been used for verification of the model. The integrated and summarized knowledge of the Oosterschelde ecosystem is used by water managers and nature and fisheries conservationists. A case study for professional civil engineers, ecologists, marine biologists, water managers, decision makers, university students and anyone interested in physical, chemical and biological estuarine and coastal sciences.

Healy, Y. Wang, J.-A. Healy, 2002-01-28. The SCOR Scientific Committee on Ocean Research of ICSU Working Group 106 was tasked with reviewing the geomorphic, sedimentary and oceanographic dynamics of muddy coasts, assessing the impact of sea level rise on muddy coasts especially in estuaries and to recommend future research pathways relating to muddy coasts. This book addresses these questions and includes chapters on the research issues of muddy coasts: the definition of muddy coasts, sea level rise effects on muddy coasts, fundamental dynamic processes effecting muddy coast formation, the role of mangrove and salt marsh vegetation, biogeochemistry of muddy coast deposits, storm surge effects on muddy coasts, human impacts on muddy coasts and a detailed geographical review of muddy coasts of the world. The volume presents examples of muddy coasts: sedimentation from many different environments of the world including the broad expanse muddy coast of China, muddy coasts of continental trailing edges, the Americas, muddy coasts in seasonally ice covered environments, muddy coasts in areas of tropical coral reefs, muddy coasts from the tropics, muddy coasts resulting from large river discharges and muddy coasts of mid latitude oceanic islands.
