Environmental Hydraulics Vijay Singh, Willi H. HAGER, 1996-08-31 Triggerd primarily by ill effects of polluted air soil and water resources on living species public concern for environmental quality has been growing during the past four decades or so One manifestation of this concern is found in occurrence of public debates as well as in the demand for full environmental impact assessment before a water resources project is approved Engineering soundness and economic feasibility are no longer sufficient criteria for construction of hydraulic works As a result environmental considerations have become very much a part of hydraulic analyses In response to growing environmental concerns the field of hydraulics has expanded and a new branch called Environmental Hydraulics has emerged The focus of this branch is on hydraulic analyses of those environmental issues that are important for protection restoration and management of environmental quality The motivation for this book grew out of the desire to provide a hydraulic discussion of some of the key environmental issues It is hoped that the book would serve to stimulate others to write more comprehensive texts on this subject of growing importance

Environmental Hydraulics Ioannis Tsanis, Jian Wu, Huihua Shen, Caterina Valeo, 2007-03-26 Hydrodynamic and pollutant transport models are useful tools for evaluating remediation options for polluted water bodies These models span the range from highly theoretical fine resolution physically based designs to lumped black box representations of real world phenomena This book examines the numerical approaches used in hydrodynamic and pollutant transport modeling First the theory and physical basis of transport and mixing in lakes and coastal waters are provided Methodologies that use a three dimensional 3D approach to predicting the fate and transport of pollutants are presented and this is followed by a presentation of alternatives to 3D circulation modeling as well as new advances in the field These alternatives offer near 3D accuracy but without the computational burden Illustrations of the calibration and verification of these models using laboratory data as well as field data are also provided The models are applied to a diverse array of study sites ranging from The Great Lakes in North America to the coastal areas of Northern Crete Presents the theory of hydrodynamic and pollutant transport modelling in lakes and coastal areas Thoroughly examines the issues and limitations of the numerical approaches used in hydrodynamic and pollutant transport modelling Demonstrates the calibration and verification of hydrodynamic and pollutant transport models using laboratory and field data Environmental Hydraulics. Environmental Hydraulics: Stratified Flows Flemming B. Pedersen, 2012-12-06 The present lecture notes cover a first course in the most common types of stratified flows encountered in Environmental Hydraulics Most of the flows are buoyancy flows i.e. currents in which gravity acts on small density differences Part I presents the basic concepts of stagnant density stratified water and of flowing non miscible stratified fluids The similarity to the presumed well known open channel flow subject to a reduced gravity is illustrated Part II treats the miscible density stratified flows In outlining the governing equations the strong coupling between the turbulence the mixing and the mean flow is emphasized The presentation and discussions of the basic governing equations are followed by illustrative examples Separate chapters are devoted to Dense Bottom Currents Free Penetrative Convection Wind driven Stratified Flow Horizontal Buoyancy Flow and

Vertical jet plumes Part III presents some examples of practical problems solved on the basis of knowledge given in the present lecture notes It is the author's experience that the topics treated in chapter 8 and in the subsequent chapters are especially well suited for self tuition followed by a study circle

The Environment in Asia Pacific Harbours Eric Wolanski, 2006-07-30 In the USA Asia and Europe as well as worldwide trade is growing rapidly and much of it depends on shipping This is leading to the development of mega cities and mega harbours The marine environment is degrading Is increasing trade ecologically sustainable This book addresses this question through harbours in the Asia Pacific region including Tokyo Bay the Pearl Estuary Hong Kong Shanghai Ho Chi Minh City Manila Bay Jakarta Bay Bangkok Singapore Klang Pearl Harbour and Darwin Much of the world trade goes through these harbours This book demonstrates through the writing of eminent scientists in each of these countries the oceanography and ecosystem science necessary to understand how these urbanised marine ecosystems function It offers science based solutions to achieve ecologically sustainable development These lessons are important not only for the Asia Pacific Region including Australia but

also worldwide The book is a wake up call that all the countries in the Asia Pacific are facing the same serious socio economic and environmental problems with varying scales Each of these countries addresses these issues differently This book shows that we have much to learn from each other to ensure that development does not need to be at the cost of the environment I commend this book for its comprehensive coverage of the links between oceanography ecosystem processes and socio economic issues
