Topic: Environment | Words: 864 Pages: 3

## Introduction

In the context of the advancement of the green economy and energy industries inclining toward alternative energy sources, the disruption in the operations of conventional oil and gas companies triggers negative public and governmental reactions. Indeed, the scope of environmental damage caused by oil spills, for example, is global and impacts the ecosystem and wildlife of the whole planet. The notorious BP oil spill in the Gulf of Mexico that happened in 2010 was an incident that demonstrated how a large company was shifting the blame on contractors to avoid responsibility, monetary, and reputational losses. From this perspective, the opposition between environmental benefits and economic gains of large corporations triggers a more generalizable discussion that necessitates a critical analysis of the response of BP to the oil spill.

## BP's Handling of the Spill

In 2010, had its drilling rig Deepwater Horizon operating in the waters of the Gulf of Mexico. In April, it exploded and sank, causing ten deaths and a large spill of oil from its tank into the ocean, which caused many problems to the wildlife and the communities living near. Many industries, including tourism, real estate, agriculture, and others, encountered significant monetary losses due to the pollution caused by the spill.

## **Environmental Issues For The Gulf:**

Challenging Environmental Issues, 2021-11-22 This volume is the result of the co author's keen interest in better understanding the environmental problems faced by all countries in the Middle East. It is also the result of the co authors' deep commitment to urge Middle Eastern citizens and their leaders to work together for better protection of their precious and fragile environment so that it may be saved for the enjoyment and safety of future generations. In the Middle East, geography and arid and semi arid climatic conditions have led to a concentration of people in coastal zones and river valleys with acute water shortages, water and air pollution, increasing soil erosion and intensifying desertification, all creating serious environmental challenges. All these issues are addressed by eight leading scholars in eight chapters which include Jordan, Oman, Lebanon, Israel, Sudan, the Arabian Gulf, Iran, Syria. Contributors are Badria A Al Awadhi, Joseph G Jabra, Nancy W Jabra, Jamil E Jreisat, Joseph A Keckichian, Alon Tal, Rania Masri, Damazo Dut Majak, Gloria Ibrahim, Saliba and Seid M Zekavat.

*The Arabian Seas: Biodiversity, Environmental Challenges and Conservation Measures* Laith A. Jawad, 2021-03-30 The Arabian Seas Marine Region encompasses marine areas from Djibouti to Pakistan including the northern part of Somalia, the Red Sea, the Arabian, Persian Gulf and parts of the Arabian Sea. Human pressures on the coastal and marine environments are evident throughout the region and have resulted in harmful environmental effects. Oil and domestic urban and industrial pollutants in several areas of this part of the world have caused local habitat degradation, eutrophication and algal blooms. Further coastal landfill, dredging and sedimentation as well as nutrient and sediment runoff from phosphate mining, agriculture and grazing and reduction in freshwater seepage due to groundwater extraction are all contributing to the degradation of coastal environments. This book discusses aspects not covered in other books on the region which largely focus on marine biodiversity and examines several environmental challenges that are often ignored but which have a significant impact on the environment. Evaluating the status quo, it also recommends conservation measures and examines the abiotic factors that play a major role in the environmental changes. Lastly, the book addresses the biodiversity of the area, providing a general context for the conservation and management measures discussed. **Environmental Issues**
