

The background of the book cover is an aerial photograph of a forest. The trees are arranged in a patchwork pattern, with some areas appearing in vibrant yellow and orange, suggesting autumn foliage, and other areas in deep green. The overall texture is dense and organic.

## **Environmental Policy In The 1990s Towards A New Agenda:**

**Environmental Policy in Search of New Instruments** B. Dente, 2013-03-09 Environmental policy is undergoing a dramatic transformation The problems connected with global change the need for preventative action and the growing importance of non source pollution call for new courses of action and new institutional arrangements In this situation it is fairly obvious that both the traditional command and control policy instruments and the more modern financial and economic instruments are increasingly under stress This volume deliberately aims to break new ground in providing the conceptual tools necessary for the next generation of environmental policies In doing so it covers a wide interdisciplinary range from public policy analysis to international law and draws upon much international experience well reflected by the mixed composition of the contributors On the basis of a shared theoretical framework the book explores the potential of new policy instruments such as policy evaluation or mediation proposes alternative institutional arrangements for dealing with the issues classifies existing instruments and illuminates the process through which old and new tools can be set into operation

**Environmental Policy Analyses** Peter Knoepfel, 2007-10-05 Having had the opportunity of receiving considerable public money mainly from the Swiss National Science Foundation for numerous environmental policy studies in Switzerland and abroad during the last 25 years I have decided to put the results published mainly in German and French but also in English in many scientific journals monographs and book sections in a single book on behalf of my students younger scholars interested in policy analysis dating from the period of the first environmental policies and my friends teaching this subject in Switzerland and abroad The criteria used to select the fifteen contributions were their impact on the scientific debate at the time of their publication their validity for present conceptualizations of policy analysis in the field of the environment and their contribution to the development of policy analysis as a whole Moreover the selected contributions mainly focus on empirical applications in the field of environmental policies or the interface between environmental and non environmental policies Some have led to concrete policy recommendations of which most have been partly implemented since at least within my own country This research also sometimes addressed regional political administrative arrangements leading to

administrative reforms and new strategic directions of implementing agencies

**Contemporary Environmental Politics** Piers Stephens, John Barry, Andrew Dobson, 2006-09-27 This new collection from the leading journal Environmental Politics presents an excellent overview of the key themes found in contemporary green political thought since the early 1990s Bringing together the journal's major work this new book charts a fascinating period in which environmental politics developed from a marginal position in society and the academy to its current place in the intellectual mainstream Subdivided into clear sections on political theory social movements political economy and policy questions and assisted by a contextualising introduction this volume focuses on a set of clear themes the character of green political theory relationships with other political traditions and theories origins and dynamics of contemporary environmental politics differences

similarities and tensions between the North and South the relationship of environmentalism to market economics and ecological modernization environmental aspects of distributive justice at the local national and global levels the roles value and valuing of nature in green theory and institutional practice As a compilation this book is unique It delivers a snapshot of a variety of issues in the field and is therefore ideally suited to teaching purposes especially at postgraduate level In addition as each section is chronologically arranged an evolution of related ideas can be clearly seen and appreciated which builds an excellent understanding of the field of environmental politics

*The Emergence of Ecological Modernisation* Mr Stephen C Young, 2018-10-24 The Emergence of Ecological Modernisation offers a wealth of empirical research material from an international perspective bringing together previously scattered sources for the first time It addresses a series of theoretical issues that are of key contemporary relevance such as the relationship between ecological modernisation and sustainable development strategies for promoting ecological modernisation and the extent to which it is possible to green contemporary capitalism

**Corporate Environmental Responsibility** Neil Gunningham, 2017-03-02 Traditionally industry has been accused of sacrificing sustainable development in the pursuit of short term profit Yet today under the banner of Corporate Environmental Responsibility CER a growing number of business organizations are claiming to be part of the solution rather than part of the problem So what is this emerging phenomenon of CER and what does it aspire to achieve How pervasive is it and what are its implications for both business and the environment This collection of essential articles and papers maps the development of the CER concept traces the principal debates concerning its contribution to environmental protection assesses the evidence as to what extent corporations are seeking to do well be doing good and explains why some companies have gone down this path when others similarly situated have been unwilling to do so In essence it asks what has CER accomplished what can it accomplish and what is beyond its reach

**Towards Environmental Sustainability?** Emin Tengström, 2018-12-20 First published in 1999 this study consists of an empirical analysis of current Danish Dutch and Swedish national transport policies along with some policy options for the near future intended to reduce the present unsustainable character of the national transport systems The study deals only with passenger transport primarily on land rather than freight transport There exists a distinct focus on environmental sustainability along with the role of the automobile in transport systems

*The Evolution of Public Policy* Toni Marzotto, Vicky Moshier Burnor, Gordon Scott Bonham, 2000 A political scientist and two regional economists from Towson University trace the employee commute option through its stages from initial idea through enactment and implementation to evaluation and reformulation The 1990 law mandated that large companies in metropolitan areas with severe ozone pollution reduce the number of their employees who drive to work alone The analysis integrates the policy cycle model and the advocacy coalition framework Paper edition

**Keeping International Commitments** Eleonore Kokotsis, 2014-04-08 This study is the first to offer explanations

for compliance with G7 commitments by identifying the patterns explaining the causes and exploring the processes of this compliance from 1988 1995 It provides the only systematic review of the G7 s compliance record in the post Cold War globalizing system of the 1990s and in regard to important environment and development commitments that have often dominated the Summit s agenda during this third cycle of summitry It draws on explanatory factors for Summit compliance from three bodies of international relations theory including regime theory concert theory and the recent extension of regime theory to embrace the effects of domestic political institutions     The Ecological Modernisation Reader Arthur P.J.

Mol,David A. Sonnenfeld,Gert Spaargaren,2020-11-25 Structural environmental reform by firms and industries governmental and intergovernmental agencies non governmental organisations NGOs and others is a worldwide phenomenon and the focus of this definitive collection Includes a comprehensive introduction to and overview of Ecological Modernisation Theory original state of the art review essays by distinguished international scholars a selection of the best published works and debates from a quarter century of related social science scholarship an emphasis on environmental issues in Asian and other emerging economies and an agenda for continued scholarship policymaking and practice Accessible to students policymakers professionals executives and others interested in deeply understanding contemporary environmental issues and taking effective action for environmental solutions Rigorous and sophisticated for use in graduate and advanced studies Appropriate for courses in Sociology Political Science Policy Studies Geography Environmental Studies Environmental Planning Business Economics Asian Studies Development Studies and other fields     Exporting Environmentalism Ronie Garcia-Johnson,2000

Exporting Environmentalism is the first book to examine industry s transnational promotion of environmental ideas and practices     **Research Handbook on Fundamental Concepts of Environmental Law** Douglas Fisher,2016-11-25 The quality and the strength of an environmental legal system is a reflection of the conceptual foundations upon which it is constructed The Research Handbook on Fundamental Concepts of Environmental Law illuminates key aspects of environmental governance through the lens of their underlying dimensions for example the form structure and language of international regional and national instruments the function of norms objectives and standards and the relevance of economic analysis and of integrated policy formulation     Environmental Policy Evaluation Per Mickwitz,2006

*Psychology and Environmental Change* Raymond S. Nickerson,2002-12-18 This book stimulates thinking on the topic of detrimental environmental change and how research psychologists can help to address the problem In addition to reporting environmentally relevant psychological research the author identifies the most pressing questions from an environmental point of view Psychology and Environmental Change focuses on ways in which human behavior contributes to the problem deals with the assessment and change of attitudes and with studies of change of behavior proposes ways in which psychological research can contribute to making technology and its products more environmentally benign and introduces topics such as consumption risk assessment cost benefit and tradeoff analyses competition negotiation and policymaking and

how they relate to the objective of protecting the environment      *General Technical Report PNW-GTR ,2007*

**Citizen-agency Interactions in Planning and Decisionmaking After Large Fires** Christine S. Olsen,2007 This report reviews the growing literature on the concept of agency citizen interactions after large wildfires Because large wildfires have historically occurred at irregular intervals research from related fields has been reviewed where appropriate This issue is particularly salient in the West where excess fuel conditions indicate that the large wildfires occurring in many states are expected to continue to be a major problem for forest managers in the coming years This review focuses on five major themes that emerge from prior research contextual considerations barriers and obstacles uncertainty and perceptions of risk communication and outreach and bringing communities together It offers ideas on how forest managers can interact with stakeholders for planning and restoration activities after a large wildfire Management implications are included

**Slaying the Nimby Dragon** Herbert Inhaber,2018-10-08 A mob scene erupted in April 1990 in the sleepy hamlet of Caneada a small town on the northern edge of the Allegheny Mountains In addition to riots and numerous arrests six senior citizens handcuffed to a heavy chain formed a human barricade across the steel bridge spanning the Genesee River Their purpose was to prevent the siting commission      Climate Change Law and Policy Cinnamon Piñon Carlarne,2010 Existing climate change governance regimes in the US and the EU contain complex mixtures of regulatory market voluntary and research based strategies The EU has adopted an approach to climate change that is based on mandatory greenhouse gas emission reductions it is grounded in hard law measures and accompanied by soft law measures at the regional and Member State level In contrast until recently the US federal government has carefully avoided mandatory emission reduction obligations and focused instead on employing a variety of soft measures to encourage rather than mandate greenhouse gas emission reductions in an economically sound market driven manner These macro level differences are critical yet they mask equally important transatlantic policy convergences The US and the EU are pivotal players in the development of the international climate change regime How these two entities structure climate change laws and policies profoundly influences the shape and success of climate change laws and policies at multiple levels of governance This book suggests that the overall structures and processes of climate change law and policy making in the US and the EU are intricately linked to international policy making and thus the long term success of global efforts to address climate change Accordingly the book analyses the content and process of climate change law and policy making in the US and the EU to reveal policy convergences and divergences and to examine how these convergences and divergences impact the ability of the global community to structure a sustainable effective and equitable long term climate strategy      The Social Frontiers of Energy Transition Evangelia Karasmanaki,2025-10-21 The Social Frontiers of Energy Transition introduces readers to the dynamic social processes that underlie shifts toward sustainable energy futures Through diverse theoretical reflections and case studies this book highlights how the energy transition intersects with issues of political representation decision making

structures and the equitable distribution of benefits and burdens associated with energy change By placing the energy transition within wider socio political contexts this work challenges purely technical or economic approaches and emphasizes the fundamentally social nature of energy transition The book is a useful resource for students researchers policymakers and practitioners seeking a more nuanced understanding of how energy change is negotiated resisted and realized across different settings

**Rethinking Authority in Global Climate Governance** Thomas Hickmann, 2015-10-16 In the past few years numerous authors have highlighted the emergence of transnational climate initiatives such as city networks private certification schemes and business self regulation in the policy domain of climate change While these transnational governance arrangements can surely contribute to solving the problem of climate change their development by different types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development
