The Environmental State Under Pressure Arthur P. J. Mol, Frederick H. institutional reforms in response to a mounting environmental crisis in Vietnam The author introduces the reader to the most important environmental problems that Vietnam is currently facing and shows how the emphasis on economic growth has come at the expense of the natural environment Following an assessment of the still deteriorating environmental situation the book develops a theoretical framework of institutional change within the political system seeking to overcome the traditionally static understanding of institutions The empirical analysis devotes attention to the main aspects on Vietnam s environmental governance including the government society businesses and international organizations The book is based on four years of empirical research including interviews with government officials and representatives of international and national non governmental organizations observations of meetings official documents and numerous Vietnamese newspaper reports This book is directed both at academics students as well as development practitioners and activists It seeks to engage those working in the fields of environmental politics governance and institutional change in one party states

**Saving Ourselves** Dana R. Fisher, 2024-02-13 We've known for decades that climate change is an existential crisis For just as long we've seen the complete failure of our institutions to rise to the challenge Governments have struggled to meet even modest goals Fossil fuel interests maintain a stranglehold on political and economic power Even though we have seen growing concern from everyday people civil society has succeeded only in pressuring decision makers to adopt watered down policies All the while the climate crisis worsens Is there any hope of achieving the systemic change we need Dana R Fisher argues that there is a realistic path forward for climate action but only through mass mobilization that responds to the growing severity and frequency of disastrous events She assesses the current state of affairs and shows why public policy and private sector efforts have been ineffective Spurred by this lack of progress climate activism has become increasingly confrontational Fisher examines the radical flank of the climate movement its emergence and growth its use of direct action and how it might evolve as the climate crisis worsens She considers when and how activism is most successful identifying the importance of creating community capitalizing on shocking moments and cultivating resilience Clear eyed yet optimistic Saving Ourselves offers timely insights on how social movements can take power back from deeply entrenched interests and open windows of opportunity for transformative climate action
