Sharp,1963 **Environment, Technology and Sustainability** Hocine Bougdah,Stephen Sharples,2009-09-11 This second volume in the Technologies of Architecture series the only series of books tuned to the architectural technology syllabus explores the environmental influences on building design Looking particularly at sustainable building a holistic view is taken so that the influence of any one set of choices on other areas such as the trade off of daylighting against thermal insulation or the balance needed between heating and ventilation are not overlooked The authors discuss available technologies for establishing a suitable microclimate within buildings for managing the transmission of sound and for minimizing the exploitation of scarce energy and of other resources Using the perspective of a designer who needs a sound scientific basis for arriving at the optimum outcome this valuably informative volume is ideal for architectural technology students as well as first and second year architecture students Environmental Technologies Lewis Carl G.,1988 **Environmental Technologies in Architecture [by] Bertram Y. skills still holds the key to unravelling alternative futures of sustainable built spaces And that most importantly humans still have a place in sustainable architecture This book will be of interest to students early career scholars established researchers and practitioners studying sustainability in the built environment It can be used as a referencee to those in the fields of design architecture landscape and urban design urban studies geography social sciences and engineering
