Advances in Life Cycle Engineering for Sustainable Manufacturing Businesses Shozo Takata, Yasushi Umeda, 2007-07-26 Life cycle engineering deals with technologies for shifting the industry from mass production and mass consumption paradigm to closed loop manufacturing paradigm in which required functions are provided for customers with the minimum amount of production This subject is discussed from the various aspects such as life cycle design design for environment reduce reuse recycle life cycle assessment and sustainable business models *Advances in Life Cycle Engineering for Sustainable Manufacturing Businesses* gathers together papers from the 14th International CIRP Life Cycle Engineering Conference This conference is the longest running annual meeting in the field in which papers are presented regarding developments of leading edge technologies proposals of new concepts and prominent industry case studies

Sustainable Design and Manufacturing 2016 Rossi Setchi, Robert J. Howlett, Ying Liu, Peter Theobald, 2016-04-02 This volume consists of 59 peer reviewed papers presented at the International Conference on Sustainable Design and Manufacturing SDM 16 held in Chania Crete Greece in April 2016 Leading edge research into sustainable design and manufacturing aims to enable the manufacturing industry to grow by adopting more advanced technologies and at the same time improve its sustainability by reducing its environmental impact SDM 16 covers a wide range of topics from sustainable product design and service innovation sustainable process and technology for the manufacturing of sustainable products sustainable manufacturing systems and enterprises decision support for sustainability and the study of societal impact of sustainability including research for circular economy Application areas are wide and varied The book will provide an excellent overview of the latest research and development in the area of Sustainable Design and Manufacturing

Life Cycle Assessment Michael Z. Hauschild, Ralph K. Rosenbaum, Stig Irving Olsen, 2017-09-01 This book is a uniquely pedagogical while still comprehensive state of the art description of LCA methodology and its broad range of applications The five parts of the book conveniently provide I the history and context of Life Cycle Assessment LCA with its central role as quantitative and scientifically based tool supporting society's transitioning towards a sustainable economy II all there is to know about LCA methodology

illustrated by a red thread example which evolves as the reader advances III a wealth of information on a broad range of LCA applications with dedicated chapters on policy development prospective LCA life cycle management waste energy construction and building nanotechnology agrifood transport and LCA related concepts such as footprinting ecolabelling design for environment and cradle to cradle IV A cookbook giving the reader recipes for all the concrete actions needed to perform an LCA V An appendix with an LCA report template a full example LCA report serving as inspiration for students who write their first LCA report and a more detailed overview of existing LCIA methods and their similarities and differences

Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas EcoDesign 2005, 2005 **Mobile**

Technology Consumption: Opportunities and Challenges Ciaramitaro, Barbara L., 2011-10-31 Whether used for communication entertainment socio economic growth crowd sourcing social and political events monitoring vital signs in patients helping to drive vehicles or delivering education mobile technology has been transformed from a mode to a medium **Mobile Technology Consumption Opportunities and Challenges** explores essential questions related to the cost benefit individual and social impact and security risks associated with the rapid consumption of mobile technology This book presents the current state of mobile technologies and their use in various domains including education healthcare government entertainment and emerging economic sectors **Design and Manufacturing** Evren Yasa, Mohsen

Mhadhbi, Eleonora Santecchia, 2020-07-29 In product development decisions taken in design and manufacturing are considered the most influential factors for succeeding commercialisation Product development is a complex integrated process of several steps starting from design where the market needs are identified and turned into competitive product specifications and different design concepts In other words design is about identifying a problem developing solution

proposals and validating the most feasible solution with real users Manufacturing technologies on the other hand help designers to make those virtual models into physical parts by transforming different types of raw materials This book on design and manufacturing written by a number of experts from all over the world presents a design perspective and different manufacturing applications from various industrial sectors **Energy Efficient Manufacturing** John W. Sutherland, David A. Dornfeld, Barbara S. Linke, 2018-07-24 Over the last several years manufacturers have expressed increasing interest in reducing their energy consumption and have begun to search for opportunities to reduce their energy usage In this book the authors explore a variety of opportunities to reduce the energy footprint of manufacturing These opportunities cover the entire spatial scale of the manufacturing enterprise from unit process oriented approaches to enterprise level strategies Each chapter examines some aspect of this spatial scale and discusses and describes the opportunities that exist at that level Case studies demonstrate how the opportunity may be acted on with practical guidance on how to respond to these opportunities

Early stages of designing resource-efficient offerings Sergio Brambila-Macias, 2018-01-17 The increasing use of natural resources and the pollution it causes calls for new ways of addressing customer needs Additionally a more uncertain and complex world also presents new challenges In this thesis these new challenges are tackled through inter and transdisciplinary research which require more interaction across disciplines to tackle complex phenomena The manner in which companies address customer needs starts from the designing a multiple stakeholder perspective of offerings where companies rely on different types of support guidelines standards methods and tools In this thesis these offerings include products services systems and solutions This plays an important role in the use of natural resources and its impact on the environment In this Licentiate I present results to show initial cues on how to design resource efficient offerings and more specifically their analysis and evaluation in the early stages of the design process This type of offerings is suggested to be crucial for the circular economy which can be understood as a paradigm shift towards sustainability In this paradigm shift designing is carried out by taking into account reuse remanufacture and recycling of products as strategies by multiple stakeholders and companies Other strategies include providing services a function or a solution through dematerialization and transmaterialization The methods used in this research are narrative and systematic literature reviews thematic analysis and a case study The results show a lack of interdisciplinary research in the academic literature in subjects relevant to the design of resource efficient offerings The results also show a need to clarify what transdisciplinary research entails Moreover current practice shows that support used by companies needs to consider several factors for it to be useful for example the vision of the company participation of potential users of the support and everyday operations among other characteristics Finally more practical support coming from academia is necessary to improve its use in industry
