Environments in a Changing World John Huckle, Adrian Martin, 2014-09-19 While there is no shortage of books on the environment there are few introductory texts that outline the social theory that informs human geographical approaches to the interactions between ecology and society Students arriving at university often lack the understanding of history economics politics sociology and philosophy that contemporary human geography requires *Environments in a Changing World* addresses this deficit providing foundation knowledge in a form that is accessible to first year students and applied to the understanding of both contemporary environmental issues and the challenge of sustainability Students are challenged to develop and defend their own ethical and political positions on sustainability and respond to the need for new forms of ecological citizenship

Island Environments in a Changing World Lawrence R. Walker, Peter Bellingham, 2011-03-24 Islands represent unique opportunities to examine human interaction with the natural environment They capture the human imagination as remote vulnerable and exotic yet there is comparatively little understanding of their basic geology geography or the impact of island colonization by plants animals and humans This detailed study of island environments focuses on nine island groups including Hawaii New Zealand and the British Isles exploring their differing geology geography climate and soils as well as the varying effects of human actions It illustrates the natural and anthropogenic disturbances common to island groups all of which face an uncertain future clouded by extinctions of endemic flora and fauna growing populations of invasive species and burgeoning resident and tourist populations

Examining the natural and human history of each island group from early settlement onwards the book provides a critique of the concept of sustainable growth and offers realistic guidelines for future island management

World Social Science Report 2013 Changing Global Environments International Social Science Council, United Nations Educational, Scientific and Cultural Organization, 2013-11-15 This book represents a comprehensive overview of the field gathering the thoughts and expertise of hundreds of social scientists from around the world This edition focuses on the transformative role of the social sciences in confronting climate and broader processes of environmental change

The Changing Global Environment S.F. Singer, 2012-12-06 We know a great deal about historical climate and its variations from various geological studies

There are two points worth remarking on One is that the climate changes frequently and radically but that the degree of variation and even sense of variation depends on the time scale which we are considering Secondly that this is a most unusual geological period for the Planet Earth we are living in a period of mountain building and glaciations whereas during most of the last 250 million years m y there was little ice and little topography A good view of climate change of the last hundred m y can be gained by looking at the paper of Kellogg We are now in a period of extensive glaciations The previous interval occurred 300 to 250 m y ago when even the Sahara was glaciated Of course it was at that time near the position of the South Pole we know that 300 m y ago the continents had not broken apart and formed one land mass Apparently between 250 and 20 m y ago there was little ice on the Earth even at Antarctica Continental basins were flooded by shallow seas This was the period when plant life and marine life proliferated and when most of our fossil fuels were laid down

Environmental Politics for a Changing World Ronnie D.

Lipschutz,Doreen Stabinsky,2018-07-12 This book argues that environmental problems are first and foremost political and

therefore about power Using a framework of political economy and political ecology the authors deconstruct current

environmental problems to identify root causes and address those problems through mobilization of collective action and

social power The second edition also offers Updated examples and stories of political struggles and the actors involved

Explicit attention to various forms of power in environmental politics including structural and social power Local politics and

collective action as related to global environmental politics Discussion of emerging issues such as synthetic biology

commodification and financialization of nature including carbon markets and geoeengineering Behavioural Responses to a

Changing World Bob B. M. Wong,Ulrika Candolin,2025-04-23 For many animals behavioural adjustments represent the first

response to human modified conditions By improving reproduction and survival such adjustments can play the lead in

maintaining viable populations in the face of rapid environmental change Behavioural responses however can also be

maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are

encountering conditions that they have never experienced before Clearly behaviour matters But how can we capitalise on our

understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a

Changing World Challenges and Applications a companion volume to the first edition published in 2012 examines wildlife

behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world
