First Planning Conference on Biomedical Experiments in Extraterrestrial Environments United States. National Aeronautics and Space Administration, 1961 Presenting and Representing Environments Graham Humphrys, Michael Williams, 2006-01-27 The presentation and representation of the environment occurs throughout academia and across all news media The strict protocols of science often clash with environmental information available from sources that dwell on subjective aesthetic emotional and personal sensitivities This book challenge the reader as student teacher researcher or policy maker to reflect critically on the ways that environments are studied interpreted presented and represented in education and public policy **Institutions in Turbulent Environments** T.P. Keating, 2018-12-21 Published in 1999 Contemporary organizations are faced with increasingly rapid and dramatic change within their political cultural and technological environments Institutions in Turbulent Environments critically examines the way organizations respond to these changes with a particular focus upon the institutional disability sector The book examines available theory concerning organizational contingency adaptation and population ecology It utilizes a framework developed from this theory to examine the ways in which a major institution for the intellectually disabled responded to the turbulence within its environment It uses this data to re examine theory and to propose changes to the way organization environment relationships are understood *Proposed Rio Puerco Resource Management Plan and Final Environmental Impact Statement* United States. Bureau of Land Management. Rio Puerco Resource Area, 1985 This Proposed Resources Management Plan and Final Environmental Impact Statement describes and analyzes the Proposed Rio Puerco Resource Management Plan for managing the public lands and resources in the Rio Puerco Resource Area New Mexico The Proposed Plan is the Balanced Management Alternative from the Draft slightly modified **Environmental Management in the Tropics** Randall Baker, 2021-06-23 The arrival of western science and economic interests to the tropics has dramatically changed the tropical environment and its ecology Environmental Management in the Tropics discusses the ecology of the tropics and examines how it is different from the temperate zone where western science evolved The author discusses how native people traditionally subsisted in different ecological zones of the tropics and how they rationalized their relationship The author also takes a critical look at the impact of colonialism in the tropics and how it changed traditional cultures and their relationship with the environment The current clash between economics and ecology in the tropics is explored in depth According to the author we are now able to draw a line in the sand and illustrate the consequences of continuing current practices Environmental Management in the Tropics shows how this situation developed and discusses how the two opposing concepts must be brought back into harmony The book is one of the few studies to take a truly interdisciplinary approach combining the serious inevitabilities of natural science with the variables of history culture politics and economics It gives us a new respect for the past and tradition of the tropics and clearly spells out why dramatic changes must occur to prevent further degradation of the tropical

Experiencing the Environment Seymour Wapner, 2012-12-06 The purpose of this volume is to explore theory problem formulation and methodology in experiencing the environment In this embryonic field the writings of a number of individuals already stand out as representative of distinctive viewpoints In order to facilitate further development of the field a conference was proposed to gather in one place representatives of a number of major viewpoints with regard to the embryonic field of environmental psychology It was hoped that a colloquy among such representatives would facilitate a clarification of the similarities and differences between the various perspectives and might enable proponents of any given point of view to benefit from the insights of others with different orientations Hopefully it might also promote a greater articulation for this emerging field of inquiry With these ends in mind the sponsors of the conference asked the various prospective participants to present their theoretical positions and representative research illustrative of those positions Some of the perspectives represented at the conference emphasized the point that the construal of phenomena depends heavily on the values and needs of perceivers Implicit in this kind of position is the thesis that anyone who seeks to describe a complex happening is likely to shape it in terms of presuppositions biases etc that may not be shared by others

History and Precedent in Environmental Design Anatol Rapoport,2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful

Eco-Types Emily Huddart Kennedy, 2022-10-04 Why acknowledging diverse eco social relationships can help us overcome the political polarization that undermines our ability to protect the environment When we picture the ideal environmentalist we likely have in mind someone who dedicates herself to reducing her own environmental footprint through individual choices about consumption driving a fuel efficient car for example or eating less meat or refusing plastic straws This is a benchmark that many aspire to and many others reject In Eco Types Emily Huddart Kennedy shows that there is more than one way to care about the environment outlining a spectrum of eco social relationships that range from engagement to indifference Drawing on three years of interviews and research Kennedy describes five archetypal relationships with the environment the Eco Engaged often politically liberal who have an acute level

of concern about the environment a moral commitment to protect it and the conviction that an individual can make a difference the Self Effacing who share the Eco Engaged s concerns but not the belief in their own efficacy the Optimists often politically conservative who are confident in their relationship with the environment doubt the severity of environmental problems and resent insinuations that they don t care the Fatalists who are pessimistic about environmental decline and feel little responsibility to adopt environment friendly habits and the Indifferent who have no affinity for any part of the environmental movement Kennedy argues that when liberals feel they have a moral monopoly on environmental issues polarization results If we are serious about protecting the planet we must acknowledge that we don t all need to care about the environment in the same way
