A Coherent Curriculum for Every Student Edmund C. Short, 2019-10-11 This book exhibits a collection of proposals for how school curriculum may be conceived designed and realized These proposals are drawn from writers both past and present who have presented some particular vision of what curriculum could be like for Pre K 12 schools and have

sought to convince others to adopt their proposal for use in some actual school situation The proposals differ from one another in a variety of ways including in their purposes their contents and their perspectives and thus pose a wealth of options for consideration by those who are planning to change their school curriculum to something new and more suitable for their particular clientele Readers will need to weigh the appeal of various proposals presented here against criteria they have for locating an optimum model for their particular situation The proposals selected for inclusion in this book address the whole of the curriculum all levels all subjects all age groups they deal with entire program change rather than with incidental changes in content program arrangements teaching approaches or other limited alterations This book is intended to be a useful resource for those responsible for making decisions in a particular school or school district or at a broader policy making level about what the entire curriculum should be and should include It draws attention to the work of many thoughtful persons who have dealt with the issue of what a coherent curriculum might be like and who in some instances have set up actual programs based on their ideas

Standards for K-12 Engineering Education? National Research Council, Committee on Standards for K-12 Engineering Education, 2010-10-28 The goal of this study was to assess the value and feasibility of developing and implementing content

standards for engineering education at the K 12 level Content standards have been developed for three disciplines in STEM education science technology and mathematic but not for engineering To date a small but growing number of K 12 students are being exposed to engineering related materials and limited but intriguing evidence suggests that engineering education can stimulate interest and improve learning in mathematics and science as well as improve understanding of engineering and technology Given this background a reasonable question is whether standards would improve the quality and increase the amount of teaching and learning of engineering in K 12 education The book concludes that although it is theoretically possible to develop standards for K 12 engineering education it would be extremely difficult to ensure their usefulness and effective implementation This conclusion is supported by the following findings 1 there is relatively limited experience with K 12 engineering education in U S elementary and secondary schools 2 there is not at present a critical mass of teachers qualified to deliver engineering instruction 3 evidence regarding the impact of standards based educational reforms on student learning in other subjects such as mathematics and science is inconclusive and 4 there are significant barriers to introducing stand alone standards for an entirely new content area in a curriculum already burdened with learning goals in more established domains of study
