Engineering, 1930-1955 Stuart Bennett,1993 Traces the consolidation of a specialty as the various feedback control devices used in the 1930s for aircraft and ships the telephone system and analogue computers were brought together during World War II to form what is now known as the classical frequency response methods of analysis and design and applied to non linear sampled data and stochastic systems Follows the field s development through the post war addition of the root locus method to the introduction of the state space methods of modern control Distributed by INSPEC Annotation copyright by Book News Inc Portland OR **Black Inventors in the Age of Segregation** Rayvon Fouché,2005-09-09 This

pathbreaking study examines the life and work of three African American inventors Granville Woods Lewis Latimer and Shelby Davidson Describing the struggles of each man to balance racial identity with a desire to be judged solely on the merit of his work Rayvon Fouché provides a nuanced view of African American contributors to technology during a period of rapid industrialization back cover *Cultures of Control* Miriam R. Levin,2005-06-27 This collection of essays explores the history of control by looking at a variety of cultural forms practices and beliefs These ideas are examined critically not only in the light of the possibilities which control technologies seem to offer for resolving human problems but also the contradictory moral political and economic consequences they have had The discussion takes into account the important modes in which humans have cast their organizational efforts political social sychological economic and legal It also takes a longue dur e view of the history of control looking back to the eighteenth and nineteenth centuries and establishes the continuities in the twentieth century as a transatlantic phenomenon **A History of Control Engineering, 1800-1930** Stuart Bennett,1986

Dr Bennett traces the growing awareness of the importance and significance of the concept of feedback in engineering and details the technical developments that contributed to this awareness There follows an account of the development of steam and hydraulic servomechanisms and their application to the control of ships and aircraft **Between Human and Machine** David A. Mindell,2003-04-30 Today we associate the relationship between feedback control and computing with Norbert Wiener s 1948 formulation of cybernetics But the theoretical and practical foundations for cybernetics control engineering and digital computing were laid earlier between the two world wars In *Between Human and Machine* Feedback Control and Computing before Cybernetics David A Mindell shows how the modern sciences of systems emerged from disparate engineering cultures and their convergence during World War II Mindell examines four different arenas of control systems research in the United States between the world wars naval fire control the Sperry Gyroscope Company the Bell Telephone

Laboratories and Vannevar Bush's laboratory at MIT. Each of these institutional sites had unique technical problems, organizational imperatives and working environments and each fostered a distinct engineering culture. Each also developed technologies to represent the world in a machine. At the beginning of World War II, President Roosevelt established the National Defense Research Committee, one division of which was devoted to control systems. Mindell shows how the NDRC brought together representatives from the four pre-war engineering cultures and how its projects synthesized conceptions of control, communications and computing. By the time Wiener articulated his vision, these ideas were already suffusing through engineering. They would profoundly influence the digital world. As a new way to conceptualize the history of computing, this book will be of great interest to historians of science, technology and culture as well as computer scientists and theorists.

Between Human and Machine: Feedback Control and Computing before Cybernetics **Routledge Revivals: The World Electronics Industry (1990)** Daniel Todd, 2018-02-05. First published in 1990, this book provides an overview of the global distribution of the electronics industry and the structural factors which promoted this distribution by the end of the 1980s. Regarded as a flagship sector in both advanced and developing countries, the electronics industry is encouraged by governments everywhere. Covering both the civilian and the military sides of the industry, Professor Todd reflects on the future of civilian electronics in the light of its global segmentation and hints at the fundamental role of governments in the unfolding of both civilian and defence electronics developments. He also endorses the overwhelming significance of strategies being played by electronics enterprises in both the USA and Japan.

Alexander P. de Seversky and the Quest for Air Power James K. Libbey, 2013-08-31. Today air power is a vital component of the U.S. armed forces. James Libbey in *Alexander P. de Seversky and the Quest for Air Power* highlights the contributions of an aviation pioneer who made much of it possible. Graduating from the Imperial Russian Naval Academy at the start of World War I, de Seversky lost a leg in his first combat mission. He still shot down thirteen German planes and became the empire's most decorated combat naval pilot. While serving as a naval attaché in the United States in 1918, de Seversky elected to escape the Bolshevik Revolution and offered his services as a pilot and consulting engineer to the U.S. War Department. He proved inventive both in the technology of advanced military aircraft and in the strategy of exercising air power. He worked for famed aviation advocate Gen. William Billy Mitchell, who encouraged the naturalized citizen to patent his inventions such as an in-flight refueling system and a gyroscopically

synchronized bombsight His creative spirit then spurred him to design and manufacture advanced military aircraft When World War II broke out in Europe de Seversky became America's best known philosopher prophet and advocate for air power even serving as an adviser to the chief of staff of the U S Air Force The highlight of his life occurred in 1970 when the Aviation Hall of Fame enshrined de Seversky for his achievements as a pilot aeronautical engineer inventor industrialist author strategist consultant and scientific advances in aircraft design and aerospace technology This book will appeal to readers with a special interest in military history and to anyone who wants to learn more about American air power's most important figures Routledge Revivals: Defence Industries (1988) Daniel Todd,2018-02-01 Originally published in 1989

Defence Industries presents a worldwide survey of defence industries It argues that modern weapon systems and electronic warfare have led to the transition of the military industrial enterprise into a multifaceted entity where electronics production is the key It analyses the extent of defence industries showing that large portions of the aerospace shipbuilding motor vehicle and electronics industries are devoted to defence and discusses where the defence industries are located It examines the differences in government policies contrasting the superpowers with newly industrialised countries THE PHYSICISTS

Daniel J. Kevles,2013-06-05 This magnificent account of the coming of age of physics in America has been heralded as the best introduction to the history of science in the United States Unsurpassed in its breadth and literary style Kevles's account portrays the brilliant scientists who became a powerful force in bringing the world into a revolutionary new era The book ranges widely as it links these exciting developments to the social cultural and political changes that occurred from the post Civil War years to the present Throughout Kevles keeps his eye on the central question of how an avowedly elitist enterprise grew and prospered in a democratic culture In this new edition the author has brought the story up to date by providing an extensive authoritative and colorful account of the Superconducting Super Collider from its origins in the international competition and intellectual needs of high energy particle physics through its establishment as a multibillion dollar project to its termination in 1993 as a result of angry opposition within the American physics community and the Congress

Inventive Minds Robert John Weber, David N. Perkins, 1992. Is invention really 99 percent perspiration and one percent inspiration as Thomas Edison assured us? *Inventive Minds* assembles a group of authors well equipped to address this question: contemporary inventors of important new technologies, historians of science and industry, and cognitive psychologists interested in the process of creativity. In telling their stories, the inventors describe the origins of such remarkable devices as ultrasound, the electron microscope, and artificial diamonds. The historians help us look into the minds of innovators like Thomas Edison, Alexander Graham Bell, Michael Faraday, and the Wright brothers, drawing on original notebooks and other sources to show how they made their key discoveries. Finally, cognitive psychologists explore the mental processes that figure in creative thinking. Contributing to the authors' insight is their special focus on the front end of invention, where ideas come from and how they are transformed into physical prototypes. They answer three questions: How does invention happen? How does invention contrast with other commonly creative pursuits such as scientific inquiry, musical composition, or painting? And how might invention best happen, that is, what kinds of settings, conditions, and strategies appear to foster inventive activity? The book yields a wealth of information that will make absorbing reading for cognitive and social psychologists, social historians, and many working scientists and general readers who are interested in the psychology of personality and the roots of ingenuity.
